that is highly relevant
to both researchers and

inquiry.

It has been estimated
that over a billion
people are using or
learning English as a
second or foreign

language, and the numbers are growing not only for English but for other languages as well. These language learners provide a burgeoning market for tools that

help identify and correct learners' writing errors.

Unfortunately, the errors targeted by typical commercial proofreading tools do

not include those
aspects of a second
language that are
hardest to learn. This
volume describes the
types of constructions
English language

learners find most difficult: constructions containing prepositions, articles, and collocations. It provides an overview of the automated approaches

that have been developed to identify and correct these and other classes of learner errors in a number of languages. Error annotation and system evaluation are
