“Wonderfully, in Akashic’s Oakland Noir, the stereotypes about the city suffer the fate of your average noir character—they die brutally.” –San Francisco Chronicle In the wake of San Francisco Noir, Los Angeles Noir, and Orange County Noir—all popular volumes in the Akashic Noir Series—comes the latest California installment, Oakland Noir. Masterfully curated by Jerry Thompson and Eddie Muller

(the "Czar of Noir"), this volume will shock, titillate, provoke, and entertain. The diverse cast of talented contributors will not disappoint. Oakland Noir offers stories by Nick Petrulakis, Kim Addonizio, Keenan Norris, Keri Miki-Lani Schroeder, Katie Gilmartin, Dorothy Lazard, Harry Louis Williams II, Carolyn Alexander, Phil Canalin, Judy Juanita, Jamie DeWolf, Nayomi Munaweera, Mahmud Rahman, Tom McElravey, Joe Loya, and Eddie Muller. "From the Oakland hills to the heart of downtown, each story brings Oakland to life." –San Jose Mercury News "Oakland is a natural for the series, with its shadowy crimes and disgruntled cops." –Zoom Street Magazine "San Francisco's grittier next-door neighbor gets her day in the sun in 16 new stories in this tightly curated entry in Akashic's Noir series. The hardscrabble streets of Oakland offer crime aplenty . . . Thompson and Muller have taken such pains to choose stories highlighting Oakland's diversity and history that the result is a volume rich in local culture as well as crime." –Kirkus Reviews

This paper discusses the essential role of the laboratory in the diagnosis and management of diabetes mellitus.

Public Transportation Quality of Service: Factors, Models, and Applications is the first book to help researchers better understand the contributing factors that can improve public transportation perception among users. The book compiles in one place metrics

currently dispersed in journal articles, government publications and book chapters. It critically analyzes currently available modeling methodologies such as the Ordered Logit/Probit model and Models of Structural Equations, highlighting their advantages and disadvantages. The book addresses models of desired quality, including the views of users and non-users, discussing the gap between desired and perceived quality. The book also examines data mining approaches such as decision trees and neural networks, showing how to involve the public in the decision-making process to create policies that encourage public transport demand. Measuring passenger's views on public transportation is of critical concern to promote wider transit use in cities around the world. Includes insights from both theoretical and practical points of view for both researchers and practitioners Features case studies in each chapter that apply models discussed Helps readers develop and design their own studies for measuring quality of service Shows how to include perceived quality in contracts Provides access to the survey formulas and data to better enable implementation of models

How to Become a Radio Amateur

This title provides a theoretically and methodologically new and distinct approach to gender through the frameworks of biopolitics and genealogy, theorising it as a historically specific apparatus of biopower. Through the use of a diverse mix of

historical and contemporary documents, the book explores how the problematisation of intersex infant genitalia in 1950s psychiatry propelled the emergence of the gender apparatus in order to socialise sexed individuals into the ideal productive and reproductive subjects of White, middle-class postwar America.

This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and o (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them

appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.

Lady Hero Fanshawe has chafed at society dictates since the death of her fiancée taught her that joy can be fleeting. When her brother disappears in Paris at the height of the Terror, she has no hesitation in disguising herself as a boy and risking her life to find him--so in joining forces with a chance-met ally, the enigmatic William Ducasse, Viscount St. Aubrey. And she has no regrets in indulging in a passionate affair with the dangerously handsome stranger, in the shadow of the guillotine.

The Color Teil chronicles Teil Duncan's artistic journey, displaying over three hundred full-color images of her work. Her studies range from figure drawings and animals to beach and pool scenes. Inspiration comes in all sizes and shapes for Teil. She attributes her artistic talent and motivation largely to her Christian faith, which, while she lost touch with it during her

young adult years, she now thrives within. Her walk with Jesus is Teil's top priority. Throughout this book, readers will become better acquainted with both the artist, as a person, and the art she creates. It is a vibrant, colorful journey that can only be described as: *The Color Teil*.

Internationally beloved opera star Deborah Voigt recounts her harrowing and ultimately successful private battles to overcome the addictions and self-destructive tendencies that nearly destroyed her life. Call Me Debbie is one of the most electrifying performances of Deborah Voigt's life. The brilliantly gifted opera soprano takes us behind the velvet curtains to tell her compelling story—a tale of success, addiction, music, and faith as dramatic as any role she has performed. For the first time, she talks about the events that led to her dangerous gastric bypass surgery in 2004 and its shocking aftermath: her substantial weight loss coupled with the “cross addiction” that led to severe alcoholism, frightening all-night blackouts, and suicide attempts. Ultimately, Voigt emerged from the darkness to achieve complete sobriety, thanks to a twelve-step program

and a recommitment to her Christian faith. Colored by hilarious anecdotes and juicy gossip that illuminate what really goes on backstage, Voigt paints diverting portraits of the artists with whom she's worked, her most memorable moments onstage, and her secrets to great singing. She also offers fascinating insight into the roles she's played and the characters she loves, including Strauss's Ariadne and Salome, Puccini's Minnie, and Wagner's Sieglinde, Isolde, and Brünnhilde, sharing her intense preparation for playing them. Filled with eight pages of color photos, Call Me Debbie is an inspirational story that offers a unique look into the life of a modern artist and a remarkable woman.

Patients can spend many hours in bed or sitting, with little to do. The influence of the immediate environment on their sense of well-being and actual recovery is the subject of this report, based on a case study of two hospitals (one general medicine, the other mental health). The study indicates that the architectural environment can contribute to the treatment of patients and significantly affect their health outcomes. Amongst the findings are: patients are sensitive and articulate about their architectural environment; patients make better progress in purpose-designed modern buildings than in older ones; better places create an overall improved atmosphere, leading to mental patients being less abusive, and general patients requiring less analgesic medication; most of the features responsible for benefits are generic place-making ones rather

than hospital-specific; costs do not appear significantly higher in the new accommodation. The authors suggest that their findings are conservative, given that the wards studied were themselves not ideal in terms of architectural features.
