

Guidelines For Cardiac Rehabilitation And Secondary Prevention Programs American Association Of Cardiovascular Pulmonary Rehabilitation Rehabilitation Promoting Health Preventing Disease

In 1991, Guidelines for Cardiac Rehabilitation Programs became the first definitive set of guidelines for practicing cardiac rehabilitation. Now, this second edition substantially updates and expands upon the first edition and parallels the new federal guidelines for implementing and restructuring cardiac rehabilitation programs. These state-of-the-art practice guidelines were developed by the American Association of Cardiovascular and Pulmonary Rehabilitation (AACVPR) - the international leader in the scientific study and clinical application of cardiac rehabilitation. The new Guidelines now contains complete sections on The Elderly Participant, Resistance Training in Cardiac Rehabilitation, Psychosocial Assessment and Intervention, and Outcomes. Also, the second edition helps prepare readers for the future of cardiac rehab, including suggestions for limiting costs, increasing accessibility to low-risk patients, and using risk stratification techniques.

Guidelines for Cardiac Rehabilitation Programs, Sixth Edition With Web Resource, presents the combined expertise of more than 50 leaders in the field of cardiac rehabilitation (CR), reimbursement, and public policy to empower professionals to successfully implement new CR programs or improve existing ones. Developed by the American Association of Cardiovascular and Pulmonary Rehabilitation (AACVPR), this guidebook offers procedures for providing patients with low-cost, high-quality programming that moves them toward a lifelong commitment to disease management and secondary prevention. Cardiovascular disease (CVD) is the principal cause of death worldwide. It is projected that by 2035, more than 130 million adults in the United States will have CVD. The challenge to CR professionals is to select, develop, and deliver appropriate rehabilitative and secondary prevention services to each patient tailored to their individual needs. Guidelines for Cardiac Rehabilitation Programs, Sixth Edition, is the definitive resource for developing inpatient and outpatient cardiac rehabilitation programs. The sixth edition of Guidelines for Cardiac Rehabilitation Programs equips professionals with current scientific and evidence-based models for designing and updating rehabilitation programs. Pedagogical aides such as chapter objectives, bottom line sections, summaries, and sidebars present technical information in an easy-to-follow format. Key features of the sixth edition include the following: A new chapter on physical activity and exercise that helps readers understand how to develop and implement exercise programs to CVD patients A new chapter on cardiac disease populations that offers readers a deeper understanding of CVD populations, including those with heart valve replacement or repair surgery, left ventricular assist devices, heart transplant, dysrhythmias, and/or peripheral artery disease Case studies and discussion questions that challenge readers to consider how concepts from the text apply to real-life scenarios An expanded web resource that includes ready-to-use forms, charts, checklists, and logs that are practical for daily use, as well as additional case studies and review questions Keeping up with change is a professional necessity and keeping up with the science is a professional responsibility. Guidelines for Cardiac Rehabilitation Programs, Sixth Edition, covers the entire scope of practice for CR programs and professionals, providing evidence-based information on promoting positive lifestyle behavior patterns, reducing risk factors for disease progression, and lessening the impact of CVD on quality of life, morbidity, and mortality. Note: The web resource is included with all new print books and some ebooks. For ebook formats that don't provide access, the web resource is available separately.

AACVPR Cardiac Rehabilitation Resource Manual is the companion text to Guidelines for Cardiac Rehabilitation and Secondary Prevention Programs. It complements and expands on the guidelines book by providing additional background material on key topics, and it presents new material concerning cardiac rehabilitation and secondary prevention. AACVPR Cardiac Rehabilitation Resource Manual combines reference-based data with practical information from the field. It applies current position statements, recommendations, and scientific knowledge from medical and scientific literature to aid in designing and developing safe, effective, and comprehensive cardiac rehabilitation programs. Useful for practitioners as well as students and instructors who are learning and teaching key concepts, AACVPR Cardiac Rehabilitation Resource Manual provides strong background support to topics addressed in the guidelines, such as risk factors for coronary heart disease, secondary prevention, psychosocial issues, and patients with special considerations. In addition, each chapter opens with a cross-reference box so that readers know where to reference the topic in the guidelines book. In addition to supporting information for the guidelines, the manual contains new information to help round out cardio programs. Topics include the atherosclerotic disease process, cardiovascular and exercise physiology, exercise prescription, and the electrocardiogram. AACVPR Cardiac Rehabilitation Resource Manual is divided into three parts. Part I examines the development and prevention of coronary artery disease, including reduction of risk factors, psychosocial issues and strategies, and contemporary procedures for revascularization. Part II delineates the role of exercise in heart disease, including the exercise and coronary artery disease connection, cardiovascular and exercise physiology, and exercise prescription. Part III focuses on special considerations, including heart disease as it relates to women and to the elderly and considerations for people with diabetes, chronic heart failure, and heart transplants. AACVPR Cardiac Rehabilitation Resource Manual contains pertinent, detailed information on the topics involved in contemporary cardiac rehabilitation and secondary prevention of coronary artery disease. Teamed with Guidelines for Cardiac Rehabilitation and Secondary Prevention Programs, the book provides professionals and students with the full range of guidelines and background materials needed for teaching and understanding the key issues in cardiac rehabilitation and secondary prevention.

Quick Reference Guide
BACR Guidelines for Cardiac Rehabilitation**

This guide is directed at the multi-disciplinary team dealing with cardiac rehabilitation. It is a practical handbook for everyday professionals on what they should do following cardiac events and return to work. It is adapted to the needs of cardiac rehabilitation centers. · Key publication from the European Association of Preventive Cardiology (EAPC) · Companion handbook to The ESC

Handbook of Preventive Cardiology: Putting Prevention into Practice This handbook is directed at cardiologists in training and practice, specialist (cardiac) nurses, technicians, exercise physiologists and other healthcare professionals involved in the multidisciplinary process of cardiac rehabilitation · Practical user-friendly handbook style presentation · Covers the complete spectrum of rehabilitation care · Key team members address key issues - smoking, diet and physical activity · Focus on high risk patients (family approach)

The aim of this textbook is to give guidance in prevention, lifestyle counselling and rehabilitation for cardiologists, other physicians and many different categories of health professionals in cardiac rehabilitation teams.

Developing and Managing Cardiac Rehabilitation Programs

The Healthy Heart Book

Guidelines for Cardiac Rehabilitation and Secondary Prevention Programs-5th Edition (with Web Resource)

Guidelines for Cardiac Rehabilitation and Secondary Prevention Programs, Fifth Edition, covers the entire scope of practice for cardiac rehabilitation and secondary prevention (CR/SP) programs. This text was developed by the American Association of Cardiovascular and Pulmonary Rehabilitation (AACVPR) and parallels federal guidelines for cardiac rehabilitation programs. It contains information on promoting positive lifestyle behavior patterns, reducing risk factors for disease progression, and lessening the impact of cardiovascular disease on quality of life, morbidity, and mortality.

As the field of pulmonary rehabilitation has continued to advance and evolve, standards for patient care and for programs have become increasingly important. Guidelines for Pulmonary Rehabilitation Programs, Fifth Edition With Web Resource, offers the best practices for patient care and serves as the must-have resource for programs to prepare for the American Association of Cardiovascular and Pulmonary Rehabilitation (AACVPR) pulmonary rehabilitation program certification. Readers will learn to tailor individualized care for respiratory patients as well as to improve new programs or update existing programs. For this revised fifth edition, AACVPR has assembled an expert team of nationally and internationally recognized authors. Together, they present the individualized and interrelated components of pulmonary rehabilitation, including initial and ongoing assessment, collaborative self-management education, exercise training, psychosocial support, and outcome measurement. Highlighted guidelines have been included throughout the book, giving readers easy-to-find guidance for implementing treatment programs and helping patients stay on track. Guidelines for Pulmonary Rehabilitation Programs, Fifth Edition With Web Resource, offers an evidence-based review in several areas based on the rapid expansion of high-quality scientific evidence since the last edition. To learn best practices for care and program development, readers will find contributions from expert pulmonary rehabilitation professionals in nursing, medicine, physical therapy, respiratory therapy, and exercise physiology. This text provides a scientific, practical framework to help aspiring and current practitioners do the following: Understand the current requirements for accrediting pulmonary-based facilities Design, implement, or update accredited pulmonary rehabilitation programs Deliver optimal care to patients with symptomatic respiratory needs Address program issues in exercise, outcomes, and management of pulmonary-based programs New to this edition, a web resource provides easy access to practical checklists from the book and offers biannual updates to keep programs current with key changes in the field. The reorganized content provides a more logical flow of information consistent with pulmonary rehabilitation development. A new chapter on nutrition helps readers to understand its importance in the rehab process and to provide rehab patients with the best opportunity for success. In the updated appendixes, readers will find a comprehensive set of forms, questionnaires, and assessment tools. With continued advancements in the science, application, and credentialing of pulmonary rehabilitation programs, the fifth edition of Guidelines for Pulmonary Rehabilitation Programs will assist respiratory practitioners in remaining up to date on the best practices in the field. This edition supports practitioners in understanding the components of pulmonary rehabilitation and applying best practices as well as updating and improving their programs to meet AACVPR certification requirements.

This detailed reference provides practical strategies and a scientific foundation for designing and implementing cardiac rehabilitation services to relieve the symptoms of cardiovascular disease patients through exercise training and risk reduction and secondary prevention, improve quality of life, and decrease mortality. Emphasizes multidisciplinary

The ESC Textbook of Preventive Cardiology

Canadian Guidelines for Cardiac Rehabilitation and Cardiovascular Disease Prevention

An Evidence-Based Approach

Dedicated to Michael Pollack (1936-1998), a preeminent scientist in the field, and intended as an up-to-date reference to both scientific and clinical topics, this volume comprises 34 contributed chapters combining the expertise of physicians with that of specialists in exercise and behavioral science. Early chapters discuss the history of cardiovascular rehabilitation, the epidemiology of cardiovascular disease, exercise as medicine from antiquity to the present, risk factor intervention, and clinical practice guidelines. Following are chapters on pathophysiology, diagnosis, and medical management; lifestyle management; common comorbidities and complications; and rehabilitation.

Because many patients reduce exercise following outpatient cardiac rehabilitation (CR), we developed an intervention to assist with the transition and evaluated its feasibility and preliminary efficacy using a one-group pretest-posttest design. Five CR patients were enrolled ~1 month prior to CR discharge and provided an activity tracker. Each week during CR they received a

summary of their physical activity and steps. Following CR discharge, participants received an individualized report that included their physical activity and step history, information on specific features of the activity tracker, and encouraging messages from former CR patients for each of the next 6 weeks. Mixed model trajectory analyses were used to test the intervention effect separately for active minutes and steps modeling three study phases: pre-intervention (day activity tracking began to CR discharge), intervention (day following CR discharge to day when final report sent), and maintenance (day following the final report to ~1 month later). Activity tracking was successfully deployed and, with weekly reports following CR, may offset the usual decline in physical activity. When weekly reports ceased, a decline in steps/day occurred. A scaled-up intervention with a more rigorous study design with sufficient sample size can evaluate this approach further.

Cardiac rehabilitation is of key importance to ameliorate long-term morbidity and mortality resulting from cardiac intervention. However, much of the current literature is dense, unwelcoming and academic in style and format. For those physicians understanding the scope of cardiac rehabilitation there is a need to distill the guidelines and various management options available to them into a concise practical manual. Up until now, all references have looked at the general options, but there is definite need to investigate the practicalities of individual patient groups. This book fulfills the need for practical guidance among all professionals involved in the management of these patients, from residents and fellows of cardiology and internal medicine, surgical teams, physiotherapy professionals, critical care physicians and family medicine practitioners.

Guidelines for Pulmonary Rehabilitation Programs

Guide to Procedures for the Twenty-first Century

A Synopsis

Guidelines for Cardiac Rehabilitation Programs

A National Clinical Guideline

Training Techniques in Cardiac Rehabilitation provides in-depth information to help practitioners make informed decisions about the broad scope of nontraditional programs currently available for an increasing variety of cardiac patients. Drawing on extensive research and vast personal experience in program implementation and benefits, the authors provide a variety of rehabilitation alternatives and a clear explanation of how, when, where, and why to use each.

The authoritative clinical handbook promoting excellence and best practice Cardiovascular Prevention and Rehabilitation in Practice is a comprehensive, practitioner-focused clinical handbook which provides internationally applicable evidence-based standards of good practice. Edited and written by a multidisciplinary team of experts from the British Association for Cardiovascular Prevention and Rehabilitation (BACPR), this book is invaluable for practitioners helping people with heart disease return to health. The text provides an overview of research findings, examines the core components of cardiac rehabilitation, and discusses how to support healthier lifestyles and reduce the risks of recurrence. Now in its second edition, this textbook has been fully revised to incorporate recent clinical evidence and align with current national and international guidelines. Increased emphasis is placed on an integrated approach to cardiac rehabilitation programmes, whilst six specified standards and six core components are presented to promote sustainable health outcomes. Describes how cardiovascular prevention and rehabilitation programmes can be delivered to meet standards of good practice Covers a broad range of topics including: promoting health behaviour change to improve lifestyle risk factors, supporting psycho-social health, managing medical risk factors, and how to develop long-term health strategies Emphasises the importance of early programme commencement with assessment and reassessment of patient goals and outcomes, and gives examples of strategies to achieve these Discusses the role of programme audit and certification of meeting minimum standards of practice Looks to the future and how delivery of cardiovascular prevention and rehabilitation programmes internationally will need to meet common challenges Cardiovascular Prevention and Rehabilitation in Practice is an indispensable resource for all health professionals involved in cardiac rehabilitation and cardiovascular disease prevention.

This book fulfills the need for practical guidance among all professionals involved in the management of these patients, from residents and fellows of cardiology and internal medicine, surgical teams, physiotherapy professionals, critical care physicians and family medicine practitioners. The thoroughly updated content takes into account recent developments in cardiac rehabilitation, and incorporates practical advice on how to use guidelines in clinical practice. There will be one new chapter on patients with cardiac resynchronization therapy and all the others will be updated to keep up-to-date with the guidelines and current practice. Cardiac rehabilitation is of key importance to ameliorate long-term morbidity and mortality resulting from cardiac diseases and events. However, much of the current literature is dense, unwelcoming and academic in style and format. For those physicians understanding the scope of cardiac rehabilitation there is a need to distill the guidelines and various management options available to them into a concise practical manual. Up until now, all references have looked at the general options, but there is definite need to investigate the practicalities of individual patient groups.

Exercise Leadership in Cardiac Rehabilitation

Cardiac Rehabilitation Program

The ESC Textbook of Cardiovascular Medicine

Guidelines for Quality Assurance in Cardiac Rehabilitation

Provides guidance on protecting the heart by living a healthy lifestyle, including explaining coronary heart disease, what the most effective exercises are for prevention of heart

disease, and how to manage stress and anxiety.

This benchmark textbook for trainees and cardiologists throughout Europe and elsewhere is now fully revised and updated. Mapped closely to the European Society of Cardiology Core Curriculum, supplemented with videos and downloadable images and accompanied by a fully searchable online version with linked full reference listings. Enhanced with EBAC accredited CME self-assessment.

This book provides physiotherapists and exercise professionals with a comprehensive resource on the exercise components and skills of constructing and teaching CR exercise. It addresses the scope of knowledge and skills required by exercise specialists developing, delivering and teaching exercise based CR programmes. It has an evidence-based framework, and provides practical advice and suggestions based on the clinical experience of the contributing authors. Among the topics covered are assessment, exercise monitoring, the use of music, safety, teaching skills and maintaining physical activity. Thus the book provides a comprehensive and practical text that can be used to plan, develop and deliver all phases of exercise based CR. "...provides a virtual pharmacopoeia of exercise guidelines for patients with cardiovascular disease, with specific reference to exercise prescription, risk stratification, exercise physiology, monitoring techniques, and leadership and organizational skills. The authors represent a prestigious group of scientists, clinicians, researchers, and teachers, who are authorities in their respective fields. Clearly, the contributors have painstakingly worked to summarize, in a clear and concise manner, the latest research findings in each area, highlighting patient care and related applications. A "must-read" for clinicians in the field of cardiac rehabilitation. I highly recommend this extraordinary text !" —Barry A. Franklin, PhD, Director, Cardiac Rehabilitation and Exercise Laboratories, William Beaumont Hospital, Royal Oak, Michigan USA; Professor of Physiology, Wayne State University, School of Medicine, Detroit, Michigan

Canadian Guidelines for Cardiac Rehabilitation and Atherosclerotic Heart Disease Prevention

ESC Handbook of Cardiovascular Rehabilitation

This guide is for developing and operating cardiac rehabilitation programmes. Anyone running a programme or establishing a new one will be able to use it as a reference, and cardiac rehab professors will find it an excellent supplemental text for graduate students.

The last three years have seen tremendous advances in the growth of cardiac rehabilitation programs within the UK and throughout Europe. The formation of the British Association for Cardiac Rehabilitation (BACR) has been a milestone in the development of a professional network that aims to improve the safety and standards of programs throughout the UI. Edited and written by a multidisciplinary subcommittee of the BACR, this book will be an invaluable tool for practitioners working in cardiac rehabilitation. BACR Guidelines for Cardiac Rehabilitation provides an overview of research findings. Areas covered include the structure, content, personnel, administration and funding of a program, as well as detailed information on exercise testing and prescription, motivating adults to exercise and other psycho-social aspects of cardiac rehabilitation.

Guidelines and Audit Standards

Promoting Health and Preventing Disease

This detailed reference provides practical strategies and a scientific foundation for designing and implementing cardiac rehabilitation services to relieve the symptoms of cardiovascular disease patients through exercise training and risk reduction and secondary prevention, improve quality of life, and decrease mortality. Emphasizes multidisciplinary care that includes exercise training, behavioral interventions, and education and counseling regarding lifestyle changes and other aspects of secondary prevention! Written by world-renowned physicians, nurses, exercise physiologists, psychologists, dietitians, educators, and counselors in the field, Cardiac Rehabilitation presents evidence-based medicine as the cornerstone of clinical cardiology practice discusses interventions that limit the physiological and psychological effects of cardiac illness offers guidelines that enable elderly patients to maintain self-sufficiency and functional independence describes means of social and workplace reintegration evaluates policies for maintaining high-quality care, efficacy, and safety in an atmosphere of diminishing resources explains the role of managed care in moving rehabilitative care into the home, workplace, and other nontraditional sites assesses new interactive technologies that aid in tracking patient data gives pragmatic recommendations for the delivery of cardiac rehabilitative care in the next millenium and more!

Advocating integrated, high-quality, consistent cardiac rehabilitation services for the well-being of patients recovering from a variety of cardiovascular problems and procedures, Cardiac Rehabilitation is ideally suited for cardiologists, cardiovascular surgeons, primary care physicians, cardiac rehabilitation professionals, cardiac care nurses, dietitians, physical and occupational therapists, exercise physiologists, psychologists, behavioral counselors, hospital managers, health plan designers, and upper-level undergraduate, graduate, and medical school students in these disciplines.
