Recent Trends in Computer-aided Diagnostic Systems for Skin Diseases: Theory, Implementation, and Analysis provides comprehensive coverage on the development of computer-aided diagnostic (CAD) systems employing image processing and machine learning tools for improved, uniform evaluation and diagnosis (avoiding subjective judgment) of skin disorders. The methods and tools are described in a general way so that these tools can be applied not only for skin diseases but also for a wide range of analogous problems in the domain

of biomedical systems. Moreover, quantification of clinically relevant information that can associate the findings of physicians/experts is the most challenging task of any CAD system. This book gives all the details in a step-by-step form for different modules so that the readers can develop each of the modules like preprocessing, feature extraction/learning, disease classification, as well as an entire expert diagnosis system themselves for their own applications. Demonstrates extensive calculations for illustrating the theoretical analysis of advanced image processing and machine learning techniques Provides a comprehensive coverage on the development of various signal processing tools for the extraction of statistical and clinically correlated features from skin lesion images Describes image processing and machine learning techniques for improved uniform evaluation and diagnosis of skin disorders

The growing number of cancer survivors presents a new challenge to generalists and specialists involved in their care. Prior cancer treatments may compound known comorbidities or contribute to future health risks. The ultimate success of cancer treatments ultimately depends on the meticulous management of post-cancer care, and this requires a clinical workforce that is engaged and ready. Cancer survivorship has now become recognized as an independent field of research and clinical practice.

the approved textbooks and teachers due to the overload of information that is easily available on the internet using different search engines. The trend and fashion are so deep-rooted to the extent that the Google search engine is the 'Bible' for everyone. These days' students do a common mistake of going through information overload and assuming the information available on the web as knowledge. It is very well true for medical students; information overload confuses the mind and focus of study. This book aids a learner of the cardiovascular system, to know the appropriate depth of knowledge that one needs to know. In the evaluation-based academic assessment, student knowledge is measured by different methods of assessment tools such as written examinations such as long essay, short essay, viva-voce, etc. This book provides comprehensive and concise knowledge based on a question so that a student develops an awareness that helps to frame the answer required for a question.

*There are several classic atlases of human anatomy available to the student, with excellent illustrations. However in most cases they are the work of an artist, seeking to present each detail to be seen in the field of view. And such drawings may not be useful to the uninitiated student of anatomy. depiction of the layout of individual structures, unobscured by detail that detracts from the main relationships within those structures. Such illustrations can be produced only by a very close collaboration of artist and anatomist and better still if the anatomist himself draws them. This atlas is the result of Dr. Singh's life time's work as both anatomist and artist. This text addresses the need for a practical handbook on asthma and allergy in adolescents and young adults, which constitutes an interesting and challenging age group. Asthma may diminish in intensity with age but is still an ongoing concern. In addition, compliance with management is not generally successful, with the risk that, the failure to treat it adequately could lead to long-term sequelae (namely, COPD). Finally, obesity and sedentarism in young adults and adolescents can worsen asthma on the one hand, while some can be athletes on the other hand. This ready reckoner aims to help in understanding clinical allergy, which is imperative for every physician who is caring for patients with asthma given its high prevalence and heterogeneous treatment options. **KEY FEATURES** Covers allergic diseases in

Physiology is the study of the myriad of mechanisms operating in the human body. It is vital to gain a rationale view of pathological processes and also, to comprehend the mechanism of action of drugs in pharmacology. Thus, physiology is the link between the basic sciences and clinical medicine. Specific Learning Objectives (SLOs) specify the learning elements in which the student should be 'competent' at the end of any teaching-learning session. The National Medical Commission (NMC) has rolled out the new Competency Driven Curriculum from the academic year 2019. The competencies in each subject define the scope (breadth) of the particular subject. Yet, students frequently ask, "How much should they read in each topic?" This book is a modest endeavour to answer this million dollar question. This book aims to define the 'depth' of the Medical Physiology curriculum.
