focus of this publication utilizes 1960's and prior motorcycles as examples, the reader is reminded that engineering theory and the laws of physics do not change and as such, the information it contains is still relevant today. Consequently, this publication is indispensable to those either contemplating modification to a current model or the construction of a 'special' for any form of motorcycle competition. Predominantly a technical work, it is written in terms easily understood by the layman. While it includes geometry and math formulae the reader will be aptly rewarded if they take a moment to

comprehend the significance of the examples. Consequently, 'Motorcycle Engineering' is considered by many knowledgeable motorcycle enthusiasts to be the best book ever written on how to construct, improve, modify and fine tune a motorcycle from the 'ground up'. It is our pleasure to offer this reprint to all motorcycle enthusiasts worldwide.

How to identify the Evolution models. 2. Why the Evolution models are better. 3. Everything you need to know about engines. 4. Troubleshooting every facet of the Evolution. And so much more! They could design, tool-up and build a new motorcycle

in a mere eighteen months. The flavor of the day could easily be accomplished with this organizational skill and dexterity. On top of this they had lower prices. The Gang of 13 took over a failing company or did they? By 1982, Harley-Davidson sales went into a tailspin with plunging production. The USA was in a deep recession. Adding to the perfect storm was the flood of Asian imports that many believe were being sold in the U.S. below their manufactured costs. Whether this was true or not, how did a small country a half-world away manufacture a quality product that was

faster, handled better, and was less expensive? Furthermore, these import motorcycles were more functional. Well, of course they did because USA motorcycle manufacturing offered old clunker styling that was slower, did not handle well, and broke down all the time! And for all of this, Harley-Davidson ' s cost more. Insulting if one thinks about it. It is not that the Evolution was that good relative to their competitors because in my opinion it was not. However, the Evolution was stellar relative to what went before. I was a loyal Shovelhead rider, necessarily becoming a mechanic

along the way. I like the rest of my ilk would never consider riding any other product. I did not care that a Honda might be functionally better, less expensive, and not require my newfound mechanical skills. Honda simply did not give what my psyche craved. Importantly, H-D dropped its lackadaisical attitude towards copyright infringement, particularly with knock-off products. Harley-Davidson became extremely aggressive against the counterfeiting of their trademarks. It licensed use of its logos with all manner merchandise that was embraced by mainstream

America followed by the world including the Japanese. H-D then saw the birth of HOG, the most successful marketing and loyalty campaign in the annals of corporate sustenance. The world embraced this pasteurized version of the outlaw subculture. You might meet the nicest people on a Honda but Harley riders are all about cool. They adapt a pseudo-outlaw lifestyle that emulates freedom and individualism. They spend much of their time adopting one charity or another to prove they really aren't bad. Many charities benefitted greatly during the Harley boom. Can these riders be

contesting the Honda mantra of niceness? The previous owners AMF deserve much credit for the success of Harley-Davidson. They gave the Gang of 13 a platform from, which to launch. These new guys were brighter than bright. They put a management team together that knew no bounds in success. I am sure that Marketing 101 in every business school teaches and will continue to teach their brilliant story. Harley-Davidson became the epitome of American manufacturing and marketing, the darling of capitalism at its finest. Think about it! How could a rusty old manufacturer

whose time had drifted by reach such pinnacles of success? Well, H-D had a little help along the way with two main sociological factors: 1. The post World War II baby boom, the aging bulge in American demographics looking for adventure and whatever (safely) came their way. 2. A generation that worked hard; raised families and then looked back at what they had missed in their youth. Harley-Davidson embodied the freedom and adventure they lacked. Harley-Davidson was granted two decades, in which to plan a lasting and viable future. It sought to be the motorcycle of

mainstream America. The world would follow. This venerable company almost pulled it off. The Motor Company updated technology both in their manufacturing venue and in the product itself. H-D balanced on a near-impossible fulcrum, maintaining tradition on one side and complying with environmental dictates on the other. The Evolution ' s successor, the air-cooled Twin Cam introduced in 1999 with great success. H-D continued to grow and prosper. I have always viewed the Twin Cam as a transitional model embracing the past but leading into a future of

overhead cams and water jackets. The new H-D V-Rod 's technological marvels are a wonderful attempt but as much as the Factory hoped, mainstream Harley riders did not take the bait en masse. After all they had their psychological needs. These attempts did not prevent dark clouds from appearing on the horizon: 1. Inexorably, the post World War II baby boom 's bulge has grown older, losing interest in reclaiming youth with interests shifting elsewhere. Who is to take over this downsizing market? Who will be left to support the Motor Company in the style it has become

accustomed? 2. In my humble opinion, the masters of marketing did not fill the coming void of consumers. I think H-D is good at pretty much everything except lowering prices for the incoming generations. Nor have they developed affordable and desirable product lines for the youth. Certainly, the Factory began to enjoy economies of scale in manufacturing. I for one do not think they have used their profits wisely for continued prosperity. Will I continue to ride a Harley at age 62? Sure I will but I was riding them before they became cool. I am not a dentist looking for a safe walk on the wild side

business turnarounds, each studied for twenty years. Nine were successful and seven unsuccessful, the differences owing to the strategies employed, the managerial skills, and character traits on the part of the people involved. The proposition advanced here is that the successful turnarounds focuses involved conscientious, carefully orchestrated efforts aimed at improving the firm's effectiveness as an efficient low-cost producer of increasingly differentiated quality products simultaneously. This study also revealed that successful turnarounds involve leaders who focus on operations, possess strong ethical values, have good personal reputations, and follow the principles of fair play in dealing with employees, creditors, suppliers, and customers. The 16 cases were drawn from actual documented histories
