"Latinos" are the largest group among Americans of color. At 59 million, they constitute nearly a fifth of the US population. Their number has alarmed many in government, other mainstream institutions, and the nativist right who fear the white-majority US they have known is disappearing. During the 2016 US election and after, Donald Trump has played on these fears, embracing xenophobic messages vilifying many Latin American immigrants as rapists, drug smugglers, or "gang bangers." Many share such nativist desires to build enhanced border walls and create immigration restrictions to keep Latinos of various backgrounds out. Many whites' racist framing has also cast native-born Latinos, their language, and culture in an unfavorable light. Trump and his followers' attacks provide a peek at the complex phenomenon of the racialization of US Latinos. This volume explores an array of racialization's manifestations, including white mob violence, profiling by law enforcement, political disenfranchisement, whitewashed reinterpretations of Latino history and culture, and depictions of "good Latinos" as racially subservient. But subservience has never marked the Latino community, and this book includes pointed discussions of Latino resistance to racism. Additionally, the book's scope goes beyond the United States, revealing how Latinos are racialized in yet other societies.

With hundreds of color photographs and illustrations, this Chinese gardening book is a wonderful introduction to penjing—China's treasured bonsai art. Although most people think bonsai is a Japanese invention, the art originated in ancient China where it is called penjing. The two Chinese characters for penjing ("pot" and "landscape") capture the essence of this art: sculpting microcosms of the beauty of the natural world from plants, rocks, soil, and water, both as an artistic process and as horticultural cultivation. Both penjing and bonsai are art forms that express the beauty of nature. In China, bonsai, as a part of penjing, is often called "tree penjing," or "tree in a pot." The Chinese divide penjing into three categories: tree penjing, rock penjing, and water-and-land penjing. This Chinese gardening book showcases the Chinese art of penjing in all its aspects for the benefit of penjing aficionados and all other readers interested in Chinese culture. It covers the concept, history, categories, aesthetic features, techniques, display, appreciation, and preservation of penjing. It is a feast for the eyes while providing a wealth of information for the academically inclined as well as the practically minded. There are more than 300 lavish illustrations grouped into three different categories of penjing. The reader will not only be awed by the beautiful compositions of penjing, but will also learn about the Chinese approach to nature and to life.

Photography has been a key means by which Australians have sought to define their relationships with Japan. From the fascination with all things Japanese in the late nineteenth century, through the era of ‘White Australia’, the bitter enmity of the Pacific War, the path to reconciliation in the post-war period and the culturally complicated bilateralism of today, Australians have used their cameras to express a divided sense of conflict and kinship with a country that has by turns fascinated and infuriated. The remarkable photographs collected and discussed here for the first time shed new light on the history of Australia’s engagement with its most important regional partner. Pacific Exposures argues that photographs tell an important story of cultural production, response and reaction—not only about how Australians have pictured Japan over the decades, but how they see their own place in the Asia-Pacific. ‘Pacific Exposures presents the first study of the photographic exchanges between Australia and Japan—its photographers, personalities, motivations, anxieties and tensions—based on a diverse range of archival materials, interviews, and well-chosen photographs.’ — Dr Luke Gartlan, University of St Andrews [Pacific Exposures] will become a key text on Australia’s interactions with Japan, and the way that photographs can inform cross-cultural relations through their production, consumption and circulation.’ — Prof. Kate Darian-Smith, University of Tasmania

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would be uninteresting to the public." -an excerpt

Appropriate for everyone interested in the simplified science of growing miniature trees or landscape garden plants. Featuring Walter Pall Bonsai.

Herb Gustafson is one of the world's leading authorities on bonsai growing. In Bonsai Workshop, he provides a step-by-step guide to dwarfing a tree, extensively illustrated with colour photographs and line drawings.

Hidden away in foggy, uncharted rain forest valleys in Northern California are the largest and tallest organisms the world has ever sustained—the coast redwood trees, *Sequoia sempervirens*. Ninety-six percent of the ancient redwood forests have been destroyed by logging, but the untouched fragments that remain are among the great wonders of nature. The biggest redwoods have trunks up to thirty feet wide and can rise more than thirty-five stories above the ground, forming cathedral-like structures in the air. Until recently, redwoods were thought to be virtually impossible to ascend, and the canopy at the tops of these majestic trees was undiscovered. In *The Wild Trees*, Richard Preston unfolds the spellbinding story of Steve Sillett, Marie Antoine, and the tiny group of daring botanists and amateur naturalists that found a lost world above California, a world that is dangerous, hauntingly beautiful, and unexplored. The canopy voyagers are young—just college students when they start their quest—and they share a passion for these trees, persevering in spite of sometimes crushing personal obstacles and failings. They take big risks, they ignore common wisdom (such as the notion that there's nothing left to discover in North America), and they even make love in hammocks stretched between branches three hundred feet in the air. The deep redwood canopy is a vertical Eden filled with mosses, lichens, spotted salamanders, hanging gardens of ferns, and thickets of huckleberry bushes, all growing out of massive trunk systems that have fused and formed flying buttresses, sometimes carved into blackened chambers, hollowed out by fire, called "fire caves." Thick layers of soil sitting on limbs harbor animal and plant life that is unknown to science. Humans move through the deep canopy suspended on ropes, far out of sight of the ground, knowing that the price of a small mistake can be a plunge to one's death. Preston's account of this amazing world, by turns terrifying, moving, and fascinating, is an adventure story told in novelistic detail by a master of nonfiction narrative. The author shares his protagonists' passion for tall trees, and he mastered the techniques of tall-tree climbing to tell the story in *The Wild Trees*—the story of the fate of the world's most splendid forests and of the imperiled biosphere itself.
