Ford FE engines, which were manufactured from the late 1950s all the way through the mid-1970s, were designated as the large-displacement engines in the Ford lineup. FE

means Ford Edsel, and reflects an era when Ford sought to promote the Edsel name. The design of these engines was implemented to increase displacement over its predecessor, the Y-Block engines of the previous decade. Early models were fairly modest in displacement, as were most big-blocks of the era, but they grew quickly to fill the needs of rapidly changing chassis requirements and consumer demand for larger vehicles. As it grew, the FE engine performed admirably as a heavy passenger car and light truck engine. It also became quite accomplished in performance circles, winning the 24 Hours of Le Mans, as well as powering Ford's muscle car and drag racing programs in the mid- to late 1960s. In this book, you will learn everything you need to know to rebuild one of these legendary engines. CarTech's unique Workbench series format takes you step-by-step through the entire rebuilding process. Covered are engine identification and selection, disassembly, cleaning, parts analysis and assessment, machine shop processes, replacement parts selection, re-assembly and start-up/break-in techniques. Along the way you find helpful tips on performance upgrades, trouble spots to look for, special tools required, and professional builder's tips. FE master, owner of Survival Motorsports, and veteran author Barry Raboutnick shares all of his tricks and secrets on building a durable and reliable FE engine. Whether you are simply rebuilding an old truck for reliable service use, restoring a 100-point show car, or building the foundation for a high-performance street and strip machine, this book will be an

irreplaceable resource for all your future FE engine projects.

The German Tiger I was the most feared battle tank of the Second World War. Its invincibility lay in its main 8.8cm gun and heavy defensive armour. Tiger Tank gives a rare insight into acquiring, owning and operating one of these awesome fighting machines, using the UK's Tank Museum's Tiger 131 – the only Tiger I in the world that has been restored to full running order. In addition to offering unique insights into maintenance and driving the Tiger, the book includes vivid personal recollections from wartime German tank crewmen and reveals what it was like to operate this 57-ton giant in combat. It was written by a team of experts from the Tank Museum who were closely involved with the strip-down and rebuild of the Tiger I. David Fletcher is a historian, a prolific author and a world expert on tanks. David Willey is a curator, and Mike Hayton is workshop manager. Other members of the writing team include volunteers Darren Hayton and Steven Vase, Mike Gibb of the SdKfz Military Vehicle Foundation and David Schofield, a specialist in forensic science.
