

Hazardous Response Guidebook

This guide will help local communities prepare for potential accidents involving hazardous materials. Describes how to form a local planning team, find a team leader, identify and analyze hazards, identify existing response equipment and personnel, write a plan, and keep the plan up to date. Will help communities, small and large alike, to make the impact of accidents less severe. Appendices: Implementing Title III; list of acronyms and recognized abbreviations; glossary; criteria for assessing state and local preparedness; bibliography. Also includes a 32-page report, "What's Happening with Hazardous Materials Emergency Response Teams," excerpts from "Energy and Transportation Network News" (April 1994). Are you in the Hazardous Waste industry or considering entering into this line of work? If so, there are many things that you need to know. The most important thing to consider in this line of work is your own personal safety and the safety of your team. Second, you must know and understand the requirements that OSHA, U.S.D.O.T., EPA, and other local, state, and federal agencies expect you to strictly follow. There is a lot of new information in this 2nd edition that will especially help personnel out in the field. Some of these new additions are: Detailed Decontamination Procedures, OSHA Confined Space Entry Regulations, and a Chemical Compatibility Chart, just to name a few. The HAZWOPER Handbook - 2nd edition can be used as a training aid for new hazardous waste workers or for those who need to update their annual refresher training. The HAZWOPER Handbook was designed for those workers who may need to reference a particular area within industry standards and practices and covers many topics such as: Environmental regulations, safety program management, energy hazards, most common job hazards, fire behavior, responding to meth labs, responding to terrorist incidents, and more! This handbook provides you with the necessary information to work safely in the field and to operate as an OSHA compliant hazardous waste worker. Author: Brett Postelli has 29 years of experience in public safety and private sector emergency response operations. Mr. Postelli began his career in public service in 1989 as a firefighter and medical first responder. While attending college, Mr. Postelli studied fire science and law enforcement. In 1994 Mr. Postelli graduated from the Kalamazoo Valley Regional Police Academy in Kalamazoo, Michigan and served as a State of Michigan certified firefighter, medical first responder and sworn police officer. After ten years of service, Mr. Postelli left the public sector and pursued work as a government contractor responding to environmental emergencies and natural disasters, provided support work and technical rescue for nuclear facilities throughout the U.S., served as an armed federal security contractor and communications technician in the Washington, D.C. area. Mr. Postelli is a published author, (Hazardous Waste Handbook - 8-40 Hr. Hazardous Waste Operations & Emergency Response, ISBN-10: 1537136453, ISBN-13: 978-1537136455, Second Edition ISBN-10: 107354656X, ISBN-13: 978-1073546565) and contributing writer for CERT Responder Magazine.

Offers a handbook for first responders to assist in determining the classification of the material involved in a hazardous materials incident and general guidelines for protecting first responders and the general public.

Does the identification number 60 indicate a toxic substance or a flammable solid, in the molten state at an elevated temperature? Does the identification number 1035 indicate ethane or butane? What is the difference between natural gas transmission pipelines and natural gas distribution pipelines? If you came upon an overturned truck on the highway that was leaking, would you be able to identify if it was hazardous and know what steps to take? Questions like these and more are answered in the Emergency Response Guidebook. Learn how to identify symbols for and vehicles carrying toxic, flammable, explosive, radioactive, or otherwise harmful substances and how to respond once an incident involving those substances has been identified. Always be prepared in situations that are unfamiliar and dangerous and know how to rectify them. Keeping this guide around at all times will ensure that, if you were to come upon a transportation situation involving hazardous substances or dangerous goods, you will be able to help keep others and yourself out of danger. With color-coded pages for quick and easy reference, this is the official manual used by first responders in the United States and Canada for transportation incidents involving dangerous goods or hazardous materials.

"This report presents a user-friendly guidebook to support risk assessment, emergency response preparedness, resource allocation, and analyses of hazardous commodity flows across jurisdictions. The guidebook, which updates the U.S. Department of Transportation's "Guidance for Conducting Hazardous Materials Flow Surveys," is targeted at transportation planning operations staff at the local and regional levels, as well as local and regional personnel involved in hazardous materials training and emergency response. A Complete Training Solution for Hazardous Materials Technicians and Incident Commanders! In 1982, the authors Mike Hildebrand and Greg Noll, along with Jimmy Yvorra, first introduced the concept of the Eight-Step Process© for managing hazardous materials incidents when their highly regarded manual, Hazardous Materials: Managing the Incident was published. Now in its Fourth Edition, this text is widely used by fire fighters, hazmat teams, bomb squads, industrial emergency response teams, and other emergency responders who may manage unplanned hazardous materials incidents. As a result of changing government regulations and consensus standards, as well as the need for terrorism response training, Mr. Noll and Mr. Hildebrand have modified and refined their process of managing hazmat incidents and added enhanced content, tips, case studies, and detailed charts and tables. The Fourth Edition contains comprehensive content covering: • Hazard assessment and risk evaluation • Identifying the problem and implementing the response plan • Hazardous materials properties and effects • Identifying and coordinating resources • Decontamination procedures • The Eight-Step Process© • Personal protective equipment selection • Procedures for terminating the incident The Fourth Edition's dynamic features include: • Knowledge and Skills Objectives correlated to the 2013 Edition of NFPA 472, Standard for Competence of Responders to Hazardous Materials/Weapons of Mass Destruction Incidents • ProBoard Assessment Methodology Matrices for the Hazardous Materials Technician and Hazardous Materials Incident Commander levels • Correlation matrix to the National Fire Academy's Fire and Emergency Services Higher Education (FESHE) Bachelor's (Non- Core) Managerial Issues in Hazardous Materials Course Objectives • Realistic, detailed case studies • Practical, step-by-step skill drills • Important hazardous materials technician and safety tips

"This Guide presents comprehensive, step-by-step guidance on assessing hazardous materials emergency response needs at state, regional, and local levels; matching state, regional, and local capabilities with potential emergencies involving different types of hazardous materials; and assessing how quickly resources can be brought to bear in an emergency. The methodology described in the Guide is designed to be scalable, allowing the implementation results to be aggregated at the local level up through regional, state, and national levels. Also, the Guide is designed to connect as many components as possible to already-established standards, guidelines, regulations, and laws, so that the Guide will remain current as these underlying components are updated. In addition, the Guide discusses appropriate means for maintaining currency of the information over time. The Guide and accompanying spreadsheet tool (on the attached CD-ROM), which leads planners through the assessment process, will be most useful for local jurisdictions that have limited resources and expertise in hazardous materials emergency response planning."--pub. desc.

It is well known that fluorescent light bulbs and consumer appliances such as televisions, computers, and monitors contain mercury, dangerous chemicals, and other harmful components. The existing literature on hazardous materials addresses the risks attached to specific materials and emphasizes compliance and personal protective equipment (PPE)—but not the life cycle management of the materials that represent the hazards. A logistics treatment of the subject is needed to understand the underlying supply chain management principles and apply solutions to reduce overall use of hazardous materials. Hazardous Material (HAZMAT) Life Cycle Management: Corporate, Community and Organizational Planning and Preparedness is organized into two thematic sections. Section I defines and classifies hazardous materials and covers the U.S. regulatory framework and standards governing the transport and use of such materials. Section II examines institutional and organizational program elements and provides guidelines for developing these programs to reduce liability and risk while lowering point-source pollution and total hazardous waste production. The logistics approach to hazardous materials yields exponential benefits in costs and the reduction or elimination of such materials. It limits organizational liability and, at the same time, reduces the costs associated with hazardous waste management and disposal. This book serves as an integrative reference offering a better understanding of hazardous materials use, life cycle management, consumption, and waste reduction at a holistic, strategic level.

It is important for responders to at least understand the basis of these regulations because they dictate everything, from how they manage a spill to the disposal of the spilt material. These regulations stipulate who should be notified and when it is not necessary, as well as what resources or assistance are available to local and state entities if the containment of a spill is beyond their capabilities.
