In the realm of health care, privacy protections are needed to preserve patients' dignity and prevent possible harms. Ten years ago, to address these concerns as well as set guidelines for ethical health research, Congress called for a set of federal standards now known as the HIPAA Privacy Rule. In its 2009 report, Beyond the HIPAA Privacy Rule: Enhancing Privacy, Improving Health Through Research, the Institute of Medicine's Committee on Health Research and the Privacy of Health Information concludes that the HIPAA Privacy Rule does not protect privacy as well as it should, and that it impedes important health research.

'An excellent introduction to the theory and practice of health promotion in a developed country such as Australia' From the foreword by Professor Brian Oldenburg This widely used text offers a comprehensive overview of the field of health promotion. Drawing on current Australian and international research, the authors provide a detailed review of health promotion principles. They demonstrate how these principles fit into the broader public health context, and how they can be integrated into practice in a range of settings, including the workplace, schools, rural communities, Indigenous communities and health care organisations. The authors also include a step-by-step guide to program management from planning to evaluation. This third edition includes new material on the use of evidence in health promotion practice, and on the increasing importance of an ecological perspective. The text has been fully revised with new data and case studies, and planning models have been updated to reflect current practice. Health Promotion is an essential text for students and a valuable resource for health professionals.

While research teams are producing relevant and valid knowledge for health promotion, there is not yet a structured manual and distinct field of health promotion research. This timely "state-of-the-art" handbook contributes to the structuring of such a field of research. This collection of original contributions explores the major epistemological, methodological, and ethical challenges facing health promotion research. It brings together experts from different "research traditions" that coexist in the field. The handbook covers the existing knowledge production and sharing practices to delineate the "discipline" and its agenda for future research. Ultimately, it contributes to the creation of a global community of health promotion researchers. The handbook is organized by four types of practices (what people actually do) studied in health promotion; the practices of:

Individuals and populations in relation to their health and its determinants Professionals who intervene to improve population health Policy-makers and institutions involved in the advocacy, design, and implementation of policies and programs Researchers and innovators (academic scholars and global agencies) through which investment in research and production of evidence-based guidelines are made. Global Handbook of Health Promotion Research, Vol. 1: Mapping Health Promotion Research is a highly relevant reference tool for researchers and graduate students in health promotion, public health, education and socio-health sciences; practitioners in health, medical, and social sectors; policy-makers; and health research administrators.

Health promotion is a key mechanism in tackling the foremost health challenges faced by developing and developed nations. Covering key concepts, theory and practical aspects, this new edition continues to focus on the themes central to health promotion practice worldwide. Social determinants, equality and equity, policy and health, working in partnerships, sustainability, evaluation and evidence-based practice are detailed, and the critical application of health promotion to practice is outlined throughout the book. Beginning with the foundations of this important area, in this new edition the authors then place greater emphasis on the role of power within health and communities. Drawing upon international settings and teaching experience in the global North and South, it finishes with a summary of the future directions of professional health promotion practice. Placing a strong emphasis on a global context, this book provides an accessible and engaging resource for postgraduate students of health promotion, public health nursing and related subjects, health practitioners and NGOs.

"Well before evidence-based practice became fashionable beyond clinical medicine, the team at SSRU was telling us what we ought to already know - that some interventions work better than others, and that that some well-meaning attempts at health promotion, just like medicine and surgery, may do harm. This book is a must for policy makers and practitioners who want to make a real difference, and understand how research evidence can inform their practice. The book will also be an important tool for researchers, who will increasingly be using the tools of systematic review if they want to inform and influence those who deliver services." - Helen Roberts, Professor of Child Health, City University This book bridges the gap between research and practice in health promotion. It advances evidence-based health promotion by illustrating how service providers and researchers can change their working practices to benefit the public. It addresses the need for health promotion services to be grounded in empirical research, and for research to focus on issues important to those delivering as well as those receiving the services. Using Research for Effective Health Promotion advances the debate about the relative values of qualitative and experimental research in health promotion, and encourages an increased participation of service users in the development and evaluation of services. It provides health promotion specialists with time-saving tools to draw upon research quickly and critically; and is an important resource for students and professionals in fields such as public health, nursing, education, social work, and voluntary services.

Building Health Promotion Capacity explores the professional practice of health promotion and, in particular, how individuals and organizations can become more effective in undertaking and supporting such practice. The book is based on the experiences of the Building Health Promotion Capacity Project (1998-2003), a continuing education and applied research venture affiliated with the Saskatchewan Heart Health Program. The project studied the process of capacity development in relation to practitioners and regional health districts in Saskatchewan. For health promotion practitioners across Canada and beyond, this book provides a coherent framework for effective professional practice. Leaders in health sector organizations will develop a firmer grasp of how to support health promotion practice and how to recruit and retain individual practitioners with a high level of capacity. Policy makers will improve their knowledge of environments that support the health promotion capacity of individuals and organizations. Scholars will learn about the nature of health promotion capacity and about a methodology for its study.

Health Promotion in Practice

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. Communities in Action: Pathways to Health Equity seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Does health promotion have a lasting and positive effect on people? With mounting pressure to reduce costs to the NHS and increasing scepticism of the so-called nanny state, health promotion initiatives are increasingly being criticised as costly and ineffective, with many arguing that health inequalities can only be reduced through radical political and economic change. This book examines the methods used to evaluate the value of health promotion projects and determines whether attempts to change people ' s lifestyles have proved successful. Taking into account the practical and ethical issues involved in deciding the appropriate approach to take in efforts to reduce health inequalities, the book assesses what might be the best path forward for health promotion.

Amid the ongoing changes in how health care is administered and financed, prevention-oriented care is a critical and cost-effective method for improving population health through primary care. As the key figure in promoting patients' health and prevention of disease, the primary care provider can play a major role in patient engagement, self-management, and behavior change. Prevention Practice in Primary Care systematically explores state-of-the-art practical approaches to effective prevention in primary care. Guided by theory and evidence, the book reviews approaches to risk factor identification and modification for the major causes of mortality in adulthood, including cancer, stroke, and cardiovascular disease. Topical coverage in this book includes: · the practical applications of genomics and proteomics to personalizing prevention · transformative approaches to practice change, including the patient-centered medical home, academic detailing, and practice facilitation · Engaging self-management and behavior change using counseling tools (goal setting, assessing the stage of change, motivational interviewing, and the five A's) Prevention Practice in Primary Care is a vital, practical guidebook for the implementation of evidence-based prevention to improve patient health. Brief, simple summaries and innovative content make it book a valuable reference for busy practitioners and students alike.

In today's world 'health' means far more than merely the absence of illness. In Rethinking Health Promotion Theodore H. MacDonald sweeps away the confusion surrounding the function and position of health promotion. He argues that, far from being a modern innovation, health promotion has existed as a distinct and separate enterprise for as long as biomedicine and cautions against health promotion becoming organized merely an off-shoot of medical care. Drawing on the author's experience as a World Health Organisation consultant, the book also tackles the question of whether health promotion has relevance on an international scale or whether it is purely a eurocentric phenomenon. Against this background individual chapters explore universal factors such as sexual health, diet, unemployment, alcohol and tobacco use. With its critical and historical approach this book breaks new ground in assessing health promotion and will be stimulating reading for the wide variety of students and professionals studying health promotion.

Dr John Kemm presents a nuanced understanding of the complexities of the field, and careful consideration of the theoretical and practical difficulties involved. With the core belief that health promotion has a vital contribution to make to the health of populations, this book is packed with the knowledge and tools necessary to help people contribute in real and practical ways to health promotion. Healthcare professionals, including lactation consultants and nurses, have the unique challenge of educating the community and their patients on healthy breastfeeding and the benefits of lactation. However, breastfeeding is not efficiently represented in texts specific to health promotion. With her 30 years' experience educating undergraduate and graduate nursing students and interprofession healthcare providers on maternal-infant health and lactation, Suzanne Hetzel Campbell is breaking that tradition. Lactation: A Foundational Strategy for Health Promotion uses evidence-based research and a person-centered care framework to empower healthcare practitioners to advocate for and support families in their breastfeeding ventures.

The field of health education is of prime importance in a rapidly changing world where computers and the internet make the possibilities almost limitless. The areas of dynamic impact include education and training of health professionals, patients, medical and other institutions of other higher learning, families of ill people, and the public at large. This book presents new and important issues in the field.
