through the use of mobile health (mhealth) technologies that allow physicians to monitor patients in real time and access important medical records from anywhere. Connecting millions of patients with caregivers like never before, mhealth technology is changing healthcare delivery for good. *Emerging Technologies in Healthcare* provides detailed descriptions of the latest mhealth technologies. It outlines the role of mhealth for self-care and remote care and describes the differences between telemedicine, telehealth, and telecare. The book justifies the use of mhealth technology for meeting regulatory standards of care and explains how analytics and social media are being used to improve the delivery of healthcare. It addresses healthcare reform and risk management in healthcare and

concludes by discussing future directions for healthcare technologies. The book is written by a leader in the application of analytics in the healthcare industry. Her extensive background in nursing and hospital administration provides her with the opportunity to share unique insights on how to apply technology and innovation to improve the management of today's healthcare systems.

quality patient care in today's healthcare system. As technology increases in complexity and scope, involving more healthcare roles and types of data analysis, so does the demand for project management and astute leadership. Among other responsibilities, Nurse Informatics Specialists (NIS) manage and implement technology initiatives so clinicians' workflow is more efficient, which improves patient care,

and the bottom line. To accomplish these goals, it is essential that the NIS has excellent Project Management skills. Written for graduate nursing students, Project Management in Nursing Informatics provides core project management skills for Informatics students. This text gives students project management examples using realistic healthcare case scenarios. Chapters describe nursing

informatics competencies and project management concepts that will be essential for clinical practicum and practical experience. Case scenarios show the consequences of right and wrong processes and highlight factors that lead to success. With plenty of chapter activities, exercises, and tasks, this text pushes the written concepts into practical realities for the NIS.

Today's physician education system produces trained doctors with strong scientific underpinnings in biological and physical sciences as well as supervised practical experience in delivering care. Significant financial public support underlies the graduate-level training of the nation's physicians. Two federal programs--Medicare and Medicaid--distribute billions each year to support teaching hospitals and other training sites

that provide graduate medical education. Graduate Medical Education That Meets the Nation's Health Needs is an independent review of the goals, governance, and financing of the graduate medical education system. This report focuses on the extent to which the current system supports or creates barriers to producing a physician workforce ready to provide high-quality, patient-centered, and affordable health care and identifies opportunities to maximize the leverage of federal funding toward these goals. Graduate Medical Education examines the residency pipeline,

geographic distribution of generalist and specialist clinicians, types of training sites, and roles of teaching and academic health centers. The recommendations of Graduate Medical Education will contribute to the production of a better prepared physician workforce, innovative graduate medical education programs, transparency and accountability in programs, and stronger planning and oversight of the use of public funds to support training. Teaching hospitals, funders, policy makers, institutions, and health care organizations will use this report as a

Your Window of Opportunity to Stand Out and Distinguish Yourself Amidst the Average or Mediocre Research shows that businesses who provide poor customer service will not only lose sales, but invariably also lose their customers to competitors. It is costing businesses an average of \$289 per Lost Customer per year. Multiply that one customer whose average lifetime with the company

is hypothetically 5 years, and that's \$1,445 of lost revenue...for just that one customer. If that same business loses 2 customers in one year, that's \$2,890 of squandered revenue. And that's not even taking into account all the referrals that those customers could've sent their way. And the referrals of those referrals. Can you see how lost revenue can rapidly and exponentially escalate? According to the American Express 2011 Global Customer Service Barometer, an annual report conducted by Echo Research in 10 nations. \* "Good customer service leads to repeat business" \* "Poor service leads to lost sales" \* "Consumers are more likely to tell

others about their poor customer service experiences" \* "Consumers will switch brands to get better Customer Service" In the American Express 2012 Global Customer Service Barometer, here are their findings. \* "Consumers think businesses are paying less attention to providing good customer service." \* "Only 7% of consumers said that the customer service experiences they have with companies usually 'exceed their expectations' (compared to 6% in 2011) and 31% said that companies usually 'miss their expectations' for customer service (compared to 29% in 2011)." \* "Most consumers still believe that companies are helpful,

but aren't doing anything extra to keep their business." \* "Consumers will spend more with companies that provide excellent service."
