DR SEBI CURE FOR GENITAL HERPES Dr. Sebi was a Honduran man with a very humble beginning and was known and addressed as an herbalist, pathologist or a naturalist in different regions of the world; he left the biosphere in 2016. Indeed, it is true that he is no longer in our midst today, but his self-invented and established effective traditional therapy for diabetes, hypertension and organ cleansing is still helping millions of people with these conditions around the world. Dr. Sebi said that there were six fundamental food groups: live, raw, dead, hybrid, genetically modified, and drugs, but his diet basically cut out all the food groups except live and raw food, thereby encouraging dieters to eat as closely to a raw vegan diet as possible. These foods include foods like naturally grown fruits and vegetables, along with whole grains. He has believed that raw and live foods were "electric," which fought the acidic food waste in the body. So, with his approach to eating, Dr. Sebi established a list of foods that he deliberated to be the best for his diet. Sticking to Dr Sebi's Diet and Food List to cure these diseases can be challenging if you eat out a lot. Consequently, you need to get used to making lots of meals at home. To help with this, this book is born so as to give you all of the information you need to eat right and the type of herbs to eat to live healthy. More than 100 million people live with the chronic and frequently painful disease, according to the World Health Organization. Dr. Sebi has been in the world longer than the average person and has seen more than they can imagine, so you should pay heed when he says that herpes can be healed with just a few herbs. Herpes is a disease that we've all heard of but are embarrassed to confess. Therefore, most of us have no idea how it works or how to treat it. We put this book together with the assistance of Dr. Sebi (diet guidelines), who has been utilizing natural cures for herpes and other sexually transmitted illnesses for years and is now ready to share what he has discovered with the rest of the world. Dr. Sebi is a big fan of natural medicine. He has spent his whole career studying plants and how they affect the body. What Is Herpes and How Does It Affect You? Herpes is one of the most common STDs and is caused by the herpes simplex virus (HSV). Oral sex, anal intercourse, vaginal sex, and even kissing are all ways to contract it. The virus can also be passed from mother to child during pregnancy or childbirth in some situations. In most circumstances, the person who has been infected with herpes will have no symptoms at first. If the virus spreads to the genitals, however, it can cause skin sores or blisters, which can lead to fever, headaches, sore throats, and swollen glands. Only about 20 herpes viruses are known to infect people, despite the fact that there are over 100 varieties of herpes viruses. HSV-1 and HSV-2 are the two most frequent kinds among them. While nearly everyone has been infected with HSV-1 at some point in their lives, most individuals will only be infected with HSV-2 once. It is conceivable for a person to contract herpes twice, but this is extremely rare. How Is Herpes Detected? Taking a blood sample to test for the presence of antibodies is the first step in diagnosing herpes. When the immune system senses an infection, antibodies are created. Herpes can be spread without causing any symptoms since it is transmitted through sexual

contact. As a result, even if there are no obvious symptoms, the existence of antibodies might establish the diagnosis. If a blood test reveals that the patient lacks antibodies, a doctor can examine other samples to see if a specific virus is present. What Is Herpes and How Does It Work? The virus enters our bodies through our genitals or mouth when we have sex with someone. The virus then goes through our circulation to nerve cells in our genitals and brain, where it remains dormant. This dormant virus remains in nerve cells and produces the glycoprotein C protein. The virus then hides in this protein, allowing it to avoid being detected by the immune system. The virus can still reproduce at this time, but it can't because the immune system has discovered it. The immune system continues to battle the virus by producing antibodies that bind to it and eliminate it. The virus, on the other hand, always returns and strives to replicate itself. This cycle repeats until the virus's immune system can no longer keep up with it. This is why herpes can be so difficult to eradicate. Is There a Herpes Cure? Herpes is usually not lethal, but it can bring a slew of issues. As a result, many people opt to treat their herpes infection using natural remedies. Herpes is a virus that can be treated with herbal remedies. I also use the same method to treat herpes. Numerous studies have confirmed this. It also has no negative side effects. It's a safe and effective technique to treat and prevent herpes. In this book, I'm going to tell you everything you need to know about this remedy. Get the book and live a healthy lifestyle!!!!

Making Peace with Herpes is the most thought-provoking and original book ever written on the subject of herpes. Christopher Scipio started off as a victim of the virus and transformed himself into one of the most experienced holistic practitioners who treats herpes in North America. He is an outspoken advocate of treatment without drug therapy." While it is a subject that many people would rather avoid, Scipio points out that 60% of the sexually active population in North America has either herpes simplex 1 or 2. "70% of the people who have it either don't know they have it, won't admit they have it or are not treating it," Scipio explains "For some people having herpes can make you feel like a leper. There are no public fundraisers or celebrity spokespersons championing the cause of herpes. In fact you would be hard-pressed to get anyone to admit in public that they have 'the gift.' " "The good news and the ironic news is that herpes is one of the easiest diseases to manage naturally. There is absolutely no need for drug-therapy for herpes. This book isn't just about how to have fewer outbreaks or how to stop having outbreaks; just doing that isn't enough to be healthy. This book is about holistically healing your herpes and living a healthy, happy and balanced life. Holistic health is about much more than making symptoms go away." Making Peace with Herpes is a must read for everyone. Whether you have herpes, are in a relationship with someone with herpes or you just want to educate yourself on the worlds fastest growing pandemic; it's a self-empowerment guide of the first order.

viruses that produce viral infections in the majority of humans. Both HSV-1 (which produces most cold sores) and HSV-2 (which produces most genital herpes) are common and contagious. They can be spread when an infected person begins shedding the virus. About 67% of the world population under the age of 50 has HSV-1. In the United States more than one-in-six people have HSV-2. Although it can be transmitted through any intimate contact, it is one of the most common sexually transmitted infections. Many of those who are infected never develop symptoms. Symptoms, when they occur, may include watery blisters in the skin or mucous membranes of the mouth, lips, nose, or genitals. Lesions heal with a scab characteristic of herpetic disease. Sometimes, the viruses cause mild or atypical symptoms during outbreaks. However, they can also cause more troublesome forms of herpes simplex. As neurotropic and neuroinvasive viruses, HSV-1 and -2 persist in the body by hiding from the immune system in the cell bodies of neurons. After the initial or primary infection, some infected people experience sporadic episodes of viral reactivation or outbreaks. In an outbreak, the virus in a nerve cell becomes active and is transported via the neuron's axon to the skin, where virus replication and shedding occur and cause new sores.
