provides a handy,
consistently structured outline for
your review of key issues in
the study of human histology, the
CD-ROM is an inter-active,
annotated digital color atlas of
micrographs. Features new to
this edition include: Over 1,200
light and electron microscopic
images (almost 500 more
images than in the first edition)
that can be superimposed with
labels and descriptive legends
New electron micrographs with
diagrammatic overlays
highlighting structural features
New sections on mitosis and
meiosis, which contain stage-by-
stage diagrams detailing

figure legends to provide an atlas that can actually be read.

Combines textual descriptions of histology with telling micrographs usually found in companion atlases. Lavishly illustrated with over 400 4-color illustrations, this text/atlas stresses the relationship of tissue structure to function. Features chapter objectives and chapter summary tables of cell classifications and functions.

Histology: Text & Atlas (with Point Access Codes)

Histology: A Text and Atlas

Ocular Histology

Junqueira's Basic Histology: Text

Provides students with information on the structure and function of tissues and organs at the cellular level.

Hystophysiologic and clinical information feature at the beginning of each chapter and thumbnail illustrations have been added to the legend.

This work is a text and atlas in one. The text provides didactic material while the atlas section guides students in the laboratory. Concise descriptions of cell and tissue structure and organization are also included in the atlas section. Artwork, including photomicrographs, shows students what they will be seeing in the laboratory.

Atlas of Histology of the Juvenile

Rat should be of interest to toxicologic pathologists, toxicologists, and other biological scientists who are interested in the histomorphology of juvenile rats. For several decades the laboratory rat has been used extensively in nonclinical toxicology studies designed to detect potential human toxicity of drugs, agrochemicals, industrial chemicals, and environmental hazards. These studies traditionally have involved young adult rats that are 8-10 weeks of age as studies are started. It is becoming increasingly apparent that children and young animals may have different responses to drug/chemical exposures,

therefore, regulatory agencies are emphasizing toxicology studies in juvenile animals. While the histologic features of organs from young adult and aged laboratory rats are well known, less is known about the histologic features of organs from juvenile rats. Final histologic maturity of many organs is achieved postnatally, thus immature histologic features must be distinguished from chemical- or drug-related effects. While this postnatal organ development is known to exist as a general concept, detailed information regarding postnatal histologic development is not readily available. The Atlas includes organs that are typically sampled in nonclinical toxicology

studies and presents the histologic features at weekly intervals, starting at birth and extending through postnatal day 42. Written and edited by highly experienced, board-certified toxicologic pathologists Includes more than 700 high-resolution microscopic images from organs that are typically examined in safety assessment toxicology studies Detailed figure legends and chapter narratives present the salient features of each organ at each time interval Figures are available for further study via Elsevier's Virtual Microscope, which allows viewing of microscopic images at higher magnification Valuable resource for toxicologic pathologists who are confronted with

covering fundamental pathological processes and then addressing the common diseases encountered in systems pathology. Hundreds of high-quality images illustrate the essential features of pathology and make it easy to make definitive comparisons to your own lab sample, while concise captions enable you to quickly and easily understand key points.

It is difficult for a teacher to accept the fact that not all of the information in his or her field is a necessary part of the armamentarium of the student. This holds for histologists, and for that matter, pathologists, biochemists, and ophthalmologists. It may especially hold for those

who were trained during exciting periods in the history of their discipline. In the past two decades, information in every basic medical science has increased greatly, perhaps exponentially, and the basic science curriculum has been compressed to the point where the medical student can reasonably be expected to acquire only a superficial knowledge of anyone of these sciences. Hence the information provided must be carefully selected, effectively presented in retainable doses, and useful for understanding material to be presented later in the curriculum and for the solution of clinical problems. In the compact courses of today, the presentation

Bookmark File PDF Histology A
Text And Atlas With Correlated
Cell And Molecular Biology 6th
Edition

of only enough data to support basic working concepts of structure and function is appropriate. Additional factual information constitutes trivia, which in our opinion interferes with effective development, retention, and use of the concepts. This philosophy has been the basis for the preparation of this book. Consistent with this philosophy, the text is brief, and the content has been carefully examined for its appropriateness to the needs of the medical student.

color art program comprising over 500 high-quality photomicrographs, scanning electron micrographs, and drawings. Didactic text in each chapter includes an Introduction, Clinical Correlations, Overview, and Chapter Summary.

This best-selling atlas contains over 900 images and illustrations to help you learn and review the microstructure of human tissues. The book starts with a section on general cell structure and replication. Basic tissue types are covered in the following section, and the third section presents the microstructures of each of the major body systems. The highest-quality color light micrographs and electron micrograph images are accompanied by concise text and

captions which explain the appearance, function, and clinical significance of each image. The accompanying website lets you view all the images from the atlas with a "virtual microscope", allowing you to view the image at a variety of pre-set magnifications. Utilizes "virtual microscope" function on the website, allowing you to see images first in low-powered and then in high powered magnification. Incorporates new information on histology of bone marrow, male reproductive system, respiratory system, pancreas, blood, cartilage, muscle types, staining methods, and more. Uses Color coding at the side of each page to make it easier to access information quickly and efficiently. Includes access to
