Book Excerpt: ...e, Miss Kingsley," he said sadly; "you and I are only fit for Sunday school entertainments." "It is thus with me about this Crown Colony affair. I know I have not risen to the height other people--my superiors, like the purser--would rise to, if they knew it; but at the same time, I may seem to those who do not know it, who only know the good intentions of England, and who regard systems as inanimate things, to be speaking harshly. I would not have mentioned this affair at all, did I not clearly see that our present method of dealing with tropical possessions under the Crown Colony system was dangerous financially, and brought with it suffering to the native races and disgrace to English gentlemen, who are bound to obey and carry out the orders given them by the system. Plotinus very properly said that the proper thing to do was to superimpose the idea upon the actual. I am not one of those who will ever tell you things are impossible, but I am particularly hopeful in this matter. England has an...

Kindness and leadership aren't often synonymous. Ask someone to describe "good leadership" to you and you will hear many adjectives used: authentic, bold, challenging, charismatic, decisive, empowering, fearless, goal-oriented, humble, inspiring, original, passionate, role-model, strategic and transparent, to name of a few. And though there are many more that come to mind, kindness isn't one of them. And here's the problem with that. Leaders lead. And the way a leader leads – how they do what they do – influences those they lead. From the president of the country, to the president of a company, from middle managers, right down to front-line supervisors, what a leader models – how they think, speak and act – influences the people they lead. Leaders who think, speak and act unkindly give legitimacy and permission to those they lead to think, speak, and act in exactly the same unkind ways. Today, in a world where a leaders' words and actions travel quickly through social media channels such as Twitter, their influence – unkind or kind – is amplified through repeated views and sharing. In an increasingly fragmented, polarized and divided world, we need leaders who will bring people together not divide them. Leaders who value and model cooperation and collaboration over competition. And who model ways to think kindly, speak kindly and act kindly. We need kindness to become synonymous with good leadership. So that when someone is asked to describe the traits of a good leader, kindness will be the first word that comes to mind. Essentially, the purpose of this book is to teach leaders how to lead with kindness so they can influence the people they lead to create kinder workplaces, organizations and the world. Each chapter contains a mixture of theory, case studies and reflections from leaders and the people they influence. As well, the book follows the fictional stories of Kay'La Janson and Kevin Landrell, as they become leaders in a failing organization that is ultimately turned around through kind leadership. Between chapters there are a series of practical exercises based on concepts presented in the previous chapter with space to record outcomes and reflections on the practice process. This book gives you a deep theoretical understanding of the importance of leading

with kindness and also provides practical exercises for you to use to turn theory into practice. Because "change means doing things differently," and because we only really "learn by doing" to create kinder organizations, kinder communities and a kinder world, leaders must be able to begin practicing kindness right away. By the time you finish the book, you will feel confident in your ability to lead with kindness and also to address organizational problems at work, at home and in the community, with kindness.

Performance Metrics for Sustainable Cities provides an overview of measurement systems and tools to enable communities to self-assess and benchmark their progress along a continuum of smart, intelligent, and sustainable development. It begins by explaining the importance of measurement and evaluation for cities and smaller communities, as well as future factors that will need to be considered and embedded into planning processes. Across 14 chapters, the book describes existing evaluation mechanisms that are being used for government funding decisions, awards of recognition, and new measurement systems to assess what makes a city smarter and more sustainable, such as broader sustainable goal targets (UN SDGs), green cities, fabrication cities, and compassionate cities. It presents examples of metrics used for important sustainability and liveability concepts for cities such as how to measure trust, engagement, compassion, circular economy, and so forth. The book ends with reflections on the feasibility of a holistic system of measurement and the implications of its implementation. This volume will be of great interest to students, researchers, and professionals of urban sustainability, planning, smart cities, and sustainable communities.

This book argues that ethical evaluation of AI should be an integral part of public service ethics and that an effective normative framework is needed to provide ethical principles and evaluation for decision-making in the public sphere, at both local and international levels. It introduces how the tenets of prudential rationality ethics, through critical engagement with intersectionality, can contribute to a more successful negotiation of the challenges created by AI technological innovations in AI and afford a relational, interactive, flexible, and fluid framework that meets the features of AI research projects, so that core public and individual values are still honoured in the face of technological development. This book will be of key interest to scholars, students, and professionals engaged in public management and ethics management, AI ethics, public organizations, public service leadership, and more broadly to public administration and policy, as well as applied ethics and philosophy.

The monograph provides ethnographically informed analyses of indigenous kin interactions in three Chinese diasporic households in the county of Los Angeles, California, U.S.A. Drawing upon the approach that regards talk as a form of social practice, the book demonstrates different ways in which kin relationships are indigenously orchestrated by foreign Chinese parents and their American-born children. Micro-analytically, social actions of membership categorization, attribution, deference, compliance, commands, and story-telling that unfold in kin interactions are foregrounded as key language devices to discuss ways in which epistemic asymmetry, power hierarchy, and harmony in kin relations are constructed or deconstructed in Chinese diasporic social lives. By way of illustration, the monograph, macro-analytically, speaks to the cultural stereotype of Chinese immigrant/foreign parents' style of parenting when they pass on the traditional Confucian ideologies in kin interaction. This book can be a useful reference textbook for graduate courses that address the dynamic intricacy among language, culture, and society.

This book examines the detrimental impact of illicit financial flows on South Africa's development, political economy, and transformation in the 21st century. Over the years, illicit financial flows have led to the systematic looting and channelling away of South African resources, yet they are rarely studied by researchers looking to explain the country's underdevelopment and political economy. This book looks across sectors, showing that illicit financial flows cut across all the key pillars of development, frustrating the betterment of peoples' lives in South Africa. Investigating the problem from a decolonial perspective, the book delves deep into the catastrophic impacts of illicit financial flows for people and the economy, discusses how the problem is being combatted, and ultimately suggests solutions for rebuilding social trust between people and the state. Making an important contribution to the decolonial debate, as well as to discussions of South Africa's political economy, this book will be of interest to researchers across African studies, global development, political science, law and corruption studies.

This new best selling adult coloring book is the perfect way to cool down and relax for those with a subversive and irreverent sense of humor. Unique Stress Relief Designs To Color. Each Coloring Page is designed for Fun and Relaxation, it includes over 30 Exclusive Gibberish Swear Word Coloring Pages Designed for Adults. Each Coloring Page is printed on a separate sheet to avoid bleed through. Each Swear Word is Designed with Animals, Flowers, Motifs, and Patterns. The Variety of Pages Ensure There is Something for Every Skill Level. Featuring some of the most inappropriate swear words imaginable, these beautiful designs are a joy to color. Each swear word is designed with animals: most of them from the Jungle, but also with flowers and other beautiful patterns. This is perfect for any adults who want to amuse themselves or their loved ones. Simply relax, choose the swear word of your choice and then color. Order now and start this incredibly delightful & impolite journey. You're

going to love it. This book explores the meanings and perceptions of development and the dialectics of theory, policy and practice. It looks at how theory translates into policy, and the disconnections in its design and implementation in the Indian context. The book focuses on the influence of capitalist globalisation, democratisation, decentralisation and neoliberal economic reforms on the development discourse in India and how these have challenged the traditional role of the 'state', the meaning of citizenship, and public participation. Through an analysis of case studies from various parts of the country, it bridges the gap between policy prescriptions and practices and unpacks the institutional, political and policy-led compulsions and incompatibilities which most often remain unreported. It also discusses the intersections between policymaking and the politics of class, caste and gender, and emphasises the role bureaucracy plays in institutional governance. The volume includes articles from professionals ranging from academics, practitioners and activists. It will be of interest to scholars and researchers of public policy, development studies, South Asian politics, and economics as well as policy makers and practitioners in government and civil society.

Dermoscopy can be a useful tool to evaluate skin of color for general dermatologic diseases; however, it does require practitioners to be aware of many points of difference from patients with lighter phototypes. This highly illustrated text brings together the pioneering experience of international experts to document patients of phototypes IV to VI (from subcontinental Asian, North African, South American, to African skin). This book analyses Russia-Europe/EU relations by exploring their practical essence and conceptualizing them in terms of the main categories of international relations research. It argues that the liberal world order, established in Cold War days, whereby international relations are underpinned by a global balance of power and a highly institutionalized framework of international relations, thereby balancing power and morality, continued after the Cold War, with high hopes in the early 1990s for a new order of security and cooperation for all Europe, including Russia. It goes on to show how the liberal world order has broken down, one manifestation of this being the new conflict between Russia and Europe in recent years, a conflict resulting from the failure of European countries/the EU to acknowledge the actual balance of

military, economic and political power, the lack of limits on the policy of European countries in terms of infringing on Russia's interests, and Russia's consequent revision, after 1999, of its policy of co-operation. Overall, the book provides huge insight into the nature of Europe-Russia relations.

Digital Participatory Planning outlines developments in the field of digital planning and designs and trials a range of technologies, from the use of apps and digital gaming through to social media, to examine how accessible and effective these new methods are. It critically discusses urban planning, democracy, and computing technology literature, and sets out case studies on design and deployment. It assesses whether digital technology offers an opportunity for the public to engage with urban change, to enhance public understanding and the quality of citizen participation, and to improve the proactive possibilities of urban planning more generally. The authors present an exciting alternative story of citizen engagement in urban planning through the reimagination of participation that will be of interest to students, researchers, and professionals engaged with a digital future for people and planning.

Clinical Disorders of Social Cognition provides contemporary neuroscientific theories of social cognition in a wide range of conditions across the lifespan. Taking a trans-diagnostic approach to understanding these disorders, it discusses how they present in different conditions, ranging from brain injury to neurodevelopmental disorders, psychiatric conditions and dementia. Social cognitive disorders directly impact upon individuals' work, leisure and social functioning. This book also collates and critiques the best and most useful assessment tools across the different disorders and coalesces research into intervention strategies across disorders to provide practical information about how such disorders can be assessed and treated so individuals can have meaningful, effective and satisfying social interactions. This book is essential reading for clinicians who work with people with clinical disorders and who are looking for new knowledge to understand, assess and treat their clients with social cognitive impairment. It will also appeal to students and professionals in clinical neuropsychology, speech and language pathology and researchers who are interested in learning more about the social brain and understanding how evidence from clinical conditions can inform this.

"Civil excavations and tunnelling provides comprehensive coverage of civil excavations at surface and subsurface locales, including tunnels created with or without the aid of explosives using the latest methods, equipment and techniques, and with due consideration to safety and the environment." "Excavation is a multi-disciplined activity involving civil, construction and mining engineers, earth-scientists and geologists. The book will appeal to practitioners, researchers and students of these disciplines."--BOOK JACKET.

The Dialogues in Urban and Regional Planning series offers a selection of some of the best scholarship in urban and regional planning from around the world with internationally recognized authors taking up urgent and salient issues from theory, to education for and practice of planning. This 7th volume features contributions on the theme of Transformative Planning: Smarter, Greener and More Inclusive Practices. It includes chapters from leading planning scholars and practitioners who critically examine how transformative planning practices seek to reduce inequalities, promote sustained, inclusive and sustainable economic growth, achieve gender equality, improve human health and well-being, foster resilience of urban communities and protect the environment and thereby change urban planning paradigms. Several case studies of emerging transformative planning interventions illustrate practical ways forward. Transformative Planning offers provocative insights into the global planning community's struggle and contribution to tackle the major challenges to society in the 21st century. It will be of use for advanced undergraduate and graduate courses in the wide-ranging fields encompassed by urban studies, sustainability studies, and urban and regional planning. The Dialogues in Urban and Regional Planning (DURP) series is published in association with the Global Planning Education Association Network (GPEAN) and its member national and transnational planning schools associations.

This title provides a systematic examination of the philosophy of Chinese art, exploring the peculiarity of artistic forms and distinctive conceptions and artistic principles of Chinese art which are grounded in the life awareness of the ancient Chinese and interconnect with the Chinese philosophy of life. Synthesizing Chinese theories of art with Western philosophical systems, the book is organized into five parts: (1) the subject, the actor who creates, appreciates, and criticizes artistic works; (2) ontological aspects, that is, the artwork per se and the dynamic process of creation; (3) aesthetic traits, the organic whole constituted by rhythm, meter, the principle of harmony, and space-time awareness; (4) artistic representation, which is manifested in the rhythm of vital energy, momentum of genre, vigour of style, and taste and inclination; and (5) the evolution of Chinese art. Based on this structural thread, the author looks into the interwoven relationship between the philosophy of Chinese art and ancient Chinese thought in terms of the spirit of life, nature-human relations, and ontological awareness of human-centredness. The book will appeal to scholars, students, and general readers interested in aesthetics, art theory, art philosophy, Chinese art, and ancient Chinese culture.

Risk science is becoming increasingly important as businesses, policymakers and public sector leaders are tasked with decision-making and investment using varying levels of knowledge and information. Risk Science: An Introduction explores the theory and practice of risk science, providing concepts and tools for understanding and acting under conditions of uncertainty. The chapters in this work cover the fundamental concepts, principles, approaches, methods and models for how to understand, assess, communicate, manage and govern risk. These topics are presented and examined in a way which details how they relate, for example, how to characterize and communicate risk with particular emphasis on reflecting uncertainties; how to distinguish risk perception and professional risk judgments; how to assess risk and guide decision-makers, especially for cases involving large uncertainties and value differences; and how to integrate risk assessment with resilience-based strategies. The text provides a variety of examples and case studies that relate to highly visible and relevant issues facing risk academics, practitioners and non-risk leaders who must make risk-related decisions. Presenting both the foundational and most recent advancements in the subject matter, this work particularly suits students of risk science courses at college and university level. The book also provides broader key reading for students and scholars in other domains, including business, engineering and public health.

Ethical Basics for the Caring Professions

"Written by an experienced engineer, this book is a series of personal conversation-style letters that offers practical career advice to all engineers. It guides them through their entire career from early education, to professional certification, on into the workplace, and eventually to retirement. Important topics such as how to acquire leadership skills, improve communication skills, and develop the business side of engineering, as well as how to find a good engineering job are also addressed. The book guides engineers on how to make good career decisions, using precise and systematic processes. It offers inspiration and insight to student engineers and working engineers on how to have successful and satisfying educations and careers. It can also help experienced engineers to more effectively guide and mentor new engineers. It explores the important topics of creativity, ethics, intellectual property, and scientific principles in engineering and at the same time weaves real-world stories, concepts, diagrams, and tips throughout the book in the form of personal letters perfect for quick and easy comprehension. The book targets all engineers working in all disciplines, all industry sectors, and all locations. Engineering students can also learn more about a career in engineering and what they need to do to prepare for it by reading this book"--

This book examines British collectors of so-called Persian art (a broad umbrella term then covering a large portion of Islamic art) in the late 19th century, including ceramics, metalwork, carpets, textiles and woodwork. Based on a foundational event, the very first exhibition of "Persian and Arab Art" held by a London Gentlemen's Club in 1885, this book follows one generation of men, retracing the subtle shades of difference among "amateurs," "connoisseurs," "experts" and "collectors," and exploring all the mechanisms of the construction of a collective fascination for the Orient. Isabelle Gadoin uncovers some of the first "scientific" analyses of Islamic objects and of the first private notebooks or exhibition catalogues, to provide an in-depth study of the way Westerners talked about Islamic objects and began to define what would become Islamic art history. All the while, Gadoin unravels the skein of Western prejudice, Romantic fancy, sincere admiration and ruthless appropriation, in art collecting, to write a new chapter of Orientalist history. The book will be of interest to scholars working in art history, history of collecting, colonialism and postcolonialism, and Orientalism.

This book discusses new and innovative trends and techniques in the removal of toxic and or refractory pollutants through various environmental biotechnological processes from wastewater, both at the laboratory and industrial scale. It focuses primarily on environmentally-friendly technologies which respect the principles of sustainable development, including the advanced trends in remediation through an approach of environmental biotechnological processes from either industrial or sewage wastewater. Features: Examines the fate and occurrence of refractory pollutants in wastewater treatment plants (WWTPs) and the potential approaches for their removal. Highlights advanced remediation procedures involving various microbiological and biochemical

processes. Assesses and compares the potential application of numerous existing treatment techniques and introduces new, emerging technologies. Removal of Refractory Pollutants from Wastewater Treatment Plants is suitable for practicing engineers, researchers, water utility managers, and students who seek an excellent introduction and basic knowledge in the principles of environmental bioremediation technologies.

How do you sell an innovative product to a market that does not yet exist? Entrepreneurial businesses often create products and services based on radically new technology that have the power to change the marketplace. Existing market research data will be largely irrelevant in these cases, making sales and marketing of innovative new products especially challenging to entrepreneurs. Entrepreneurial Marketing focuses on this challenge. Classic core marketing concepts, such as segmentation, positioning, and the marketing mix undergo an 'extreme makeover' in the context of innovative products hitting the market. Edwin J. Nijssen stresses principles of affordable loss, experimentation, and adjustment for emerging opportunities, as well as cooperation with first customers. Containing many marketing examples of successful and cutting-edge innovations (including links to websites and videos), useful lists of key issues, and instructions on how to make a one-page marketing plan, Entrepreneurial Marketing provides a vital guide to successfully developing customer demand and a market for innovative new products. This third edition has been thoroughly expanded, including: Expanded content on leveraging digital technologies and their new business models More practical tools, such as coverage of the Lean Canvas model Updated references, cases, and new examples throughout; and, Updated online resources This book equips advanced undergraduate and postgraduate students of marketing strategy, entrepreneurial marketing, and entrepreneurship with the fundamental tools to succeed in marketing.

Revised to reflect significant advances in pharmaceutical production and regulatory expectations, Handbook of Validation in Pharmaceutical Processes, Fourth Edition examines and blueprints every step of the validation process needed to remain competitive. This book blends the use of theoretical knowledge with recent technological advancements to achieve applied process solutions. As the industry's leading source for validation of sterile pharmaceutical processes for more than 10 years, this great work is a comprehensive analysis of all the fundamental elements of pharmaceutical and bio-pharmaceutical production processes. Handbook of Validation in Pharmaceutical Processes, Fourth Edition is essential for all global health care manufacturers and pharmaceutical industry professionals. Key Features: Provides an in-depth discussion of recent advances in sterilization Identifies

that may be encountered at any stage of the validation program, and suggests the newest and most advanced solutions. Explores process steps, and identifies critical process control points to reach acceptable results. New chapters include disinfection of combination products, nano-technology, rapid microbial methods, contamination control in non-sterile products, liquid chemical sterilization, and medical device manufacture.

Under Pressure is about instigation and design in urban housing. Urban housing is a bellwether for economic, social, and political life. It varies widely in quality, typology, and audience and lies between the formal systems of urban infrastructure and the informal systems of daily life. Housing's complexity offers unique and exciting opportunities to architects. Its entwinement with private equity and public agencies presents important challenges amplified by urbanization. This book gathers and contextualizes relevant conversations about housing unfolding today across architecture through four topics: Learning from History, Changing Domesticities, Housing Finance, Policy, and Design and Material Innovation. The result is a multi-disciplinary amalgam of research and design intelligence from leading leaders in the fields of architecture, real estate, economics, policy, material design, and finance.

Blockchain is an emerging technology for organizations to almost instantaneously make and verify transactions, streamlining business processes, saving money, and reducing the potential for fraud. This book covers the application of blockchain technology to the real world, it describes the opportunities and challenges for adoption of DLT (Digital Ledger Technology) in a corporate environment. It provides specific use cases that may benefit from a decentralized and distributed trustless network. There are many books on blockchain technology, but the centralized ledger technology made famous (or infamous) by Bitcoin, Onecoin and others. But as cryptocurrencies and stocks have crashed and fall with surprise volatility and the world economy emerges changed by coronavirus and the resulting economic crash, many are looking again at the powerful features of blockchain and how these may help them adapt. This new book sets out the core concepts of blockchain and uniquely describes, in natural language and in real-life scenarios, how de-centralised ledgers may affect industries such as virus-tracking apps, finance, investment and healthcare.

Capitalist societies need to undergo major change to provide for the material needs of all the people who work within the system. The 1 percent. They have become dysfunctional and need a different kind of orientation to continue in existence. Instead of creating wealth, which is what they are supposed to accomplish, they have created nothing but debt for the past several decades and are now in trouble with regard to finding the wherewithal to keep on functioning as viable societies that can provide job opportunities for all and the promise of a better life in the future for their citizens. The coronavirus pandemic has exposed just how many people are living paycheck and have not been able to accumulate any kind of savings. The 1 percent, meanwhile, have benefited greatly and have significantly increased their wealth over the past several decades. This book does not advocate the need to turn to a form of socialism, but rather to give most workers a chance at a decent life for themselves. What is needed is a redefinition of capitalism to make it work for everyone. Capitalism and Capitalism seeks to uncover various myths about capitalism that hinder our ability to change the system and discuss the process of redefining capitalism by examining where neo-liberalism went wrong and what role restructuring the corporation along stakeholder lines can play in making capitalism more responsive to the entire society. It will be of interest to researchers, academics, and students.

Lived Experiences of Housing and Infrastructure between Displacement and Relocation

The former VA secretary describes his fight to save veteran health care from partisan politics and how his efforts were ultimately derailed by a small group of unelected officials appointed by the Trump White House. Known in health care circles for his ability to turn around ailing hospitals, Dr. David Shulkin was originally brought into government by President Obama to save the beleaguered Department of Veterans Affairs. When President Trump appointed him as secretary of the VA, Shulkin was as shocked as anyone. Yet this surprise was trivial compared to what Shulkin encountered as secretary: a team of political appointees devoted to stopping anyone -- including the secretary himself -- who stood in the way of privatizing the agency and implementing their political agenda. In this uninhibited memoir, Shulkin opens up about why the government has long struggled to provide good medical care to military veterans and the plan he had to solve these problems. This is a book about the commitment we make to the men and women who risk their lives fighting for our country, how the VA was finally beginning to live up to it, and why the new administration may now be taking us in the wrong direction.

Коммерсантъ 99-2015Litres

Maintaining a practical perspective, Python Programming: A Practical Approach acquaints you with the wonderful world of programming. The book is a starting point for those who want to learn Python programming. The backbone of any programming, which is the data structure and components such as strings, lists, etc., have been illustrated with many examples and enough practice problems to instill a level of self-confidence in the reader. Drawing on knowledge gained directly from teaching Computer Science as a subject and working on a wide range of projects related to ML, AI, deep learning, and blockchain, the authors have tried their best to present the necessary skills for a Python programmer. Once the foundation of Python programming is built and the readers are aware of the exact structure, dimensions, processing, building blocks, and representation of data, they can readily take up their specific problems from the area of interest and solve them with the help of Python. These include, but are not limited to, operators, control flow, strings, functions, module processing, object-oriented programming, exception and file handling, multithreading, synchronization, regular expressions, and

Python database programming. This book on Python programming is specially designed to keep readers busy with learning fundamentals and generates a sense of confidence by attempting the assignment problems. We firmly believe that explaining any particular technology deviates from learning the fundamentals of a programming language. This book is focused on helping readers attempt implementation in their areas of interest through the skills imparted through this book. We have attempted to present the real essence of Python programming, which you can confidently apply in real life by using Python as a tool. Salient Features □ Based on real-world requirements and solution. □ Simple presentation without avoiding necessary details of the topic. □ Executable programs on almost every topic. □ Plenty of exercise questions, designed to test readers' skills and understanding. Purposefully designed to be instantly applicable, Python Programming: A Practical Approach provides implementation examples so that the described subject matter can be immediately implemented due to the well-known versatility of Python in handling different data types with ease.

Urban Resettlements in the Global South provides new perspectives on resettlement through an urban studies lens. To date, resettlement has been theorised through development studies and refugee studies, but urban resettlement is also a major dimension of urban development in the Global South and may help to rethink contemporary urban dynamics between spectacular new town developments and rising incidences of eviction and displacement. Conceptualising resettlement as a binding notion between production/regeneration and destruction/demolition of urban space helps to illuminate interdependencies and to underline significant ambiguities within affected people's perspectives towards resettlement projects. This volume will offer an interesting selection of ten different case studies with rich empirical data from Latin America, North and Sub-Saharan Africa, and Asia, focused on each stage of resettlement (before, during, after relocation) through different timescales. By offering a frame for analysing and rethinking resettlement within urban studies, it will support any scholar or expert dealing with resettlement, displacement, and housing in an urban context, seeking to improve housing and planning policies in and for the city.

Tribology and Sustainability brings a vision of promoting a greener, cleaner and eco-friendly environment by highlighting sustainable solutions in tribology via the development of self-lubricating

materials, green additives in lubricants, natural fibre-reinforced materials and biomimetic approaches. Backed by supporting schematic diagrams, data tables and illustrations for easy understanding, the book focuses on recent advancements in tribology and sustainability. Global sustainability and regional requirements are addressed through chapters on natural composites, green lubricants, biomedical systems and wind energy systems, with a dedicated chapter on a global sustainability scenario. FEATURES Highlights sustainability via new tribological approaches and how such methods are essential Covers the theoretical aspects of various tribological topics concerning mechanical and material designs for energy-efficient systems Includes practical global sustainability based on the regional requirements of tribological research and sustainable impact Reviews the tribology of green lubricants, green additives and lightweight materials Discusses topics related to biomimetics and biotribology Tribology and Sustainability will assist researchers, professionals and graduate students in tribology, surface engineering, mechanical design and materials engineering, including mechanical, aerospace, chemical and environmental engineering.

This newest edition of Broadcast Journalism continues its long tradition of covering the basics of broadcasting from gathering news sources, interviewing, putting together a programme, news writing, reporting, editing, working in the studio, conducting live reports, and more. Two new authors have joined forces in this new edition to present behind the scenes perspectives on multimedia broadcast news, where it is heading, and how you get there. Technology is meshing global and local news. Constant interactivity between on-the-scene reporting and nearly instantaneous broadcasting to the world has changed the very nature of how broadcast journalists must think, act, write and report on a 24/7 basis. This new edition takes up this digital workflow and convergence. Students of broadcast journalism and professors alike will find that the sixth edition of Broadcast Journalism is completely up-to-date. Includes new photos, quotations, and coverage of convergent journalism, podcasting, multimedia journalism, citizen journalism, and more!

This book argues that renewable electrification in developing countries provides important opportunities for local economic development, but new pathways are required for turning these opportunities into successful reality. Building Innovation Capabilities for Sustainable Industrialisation offers a novel input into the debate on development of capabilities for sustainable industrialisation and delivers key insights for both researchers and policy makers when it comes to the question of how to increase the economic co-benefits of renewables expansion. The chapters in the book use a tailored analytical framework in their studies of renewable electrification efforts in Kenya and other countries in sub-Saharan Africa. They draw on a mix of project, sector and country level case studies to address questions such as: What capabilities are developed through on-going renewable electrification projects in developing economies? How can the expansion of renewable electrification be supported in a way that

also encourages sustainable economic development? What role do international linkages (South-South and North-South) play and what role should they play in the greening of energy systems in developing economies? The authors provide a new understanding of how green transformation and sustainable industrialisation can be combined, highlighting the opportunities and constraints for local capability building and the scope for local policy action. This book will be of great interest to students and scholars of development studies, energy studies, sustainability and sustainable development, as well as practitioners and policy makers working in development organisations and national governments.

This book provides an extensive overview of producing in the ever-changing field of journalism for all types of newsrooms. Featuring interviews with renowned journalism professionals, *A Complete Guide to Television, Field, and Digital Producing* offers an in-depth look at the broadcast, field, and digital producing practices of newsrooms today. The book is divided into three parts: television news producing, field producing, and digital producing. Each part provides a clear explanation of the producing role before going into more detail on important skills such as developing stories, writing copy, creating graphics, producing live on location, audience engagement, and using social media. Each chapter includes a variety of supplemental material, including discussion questions, keyword definitions, classroom activities, and graded assignments, including rubrics. Written with a combined 64 years of journalism and journalism education experience, the book will prepare students to produce whatever their job requires. Taking an integrated approach to journalism education, this is a vital text for journalism and media students studying digital media, broadcast journalism, social media, and reporting.

Practical Career Advice for Engineers

*This book gathers and explains the key brand analysis tools that measure brand effectiveness and awareness along the customer journey. Rather than considering how to build and manage a brand, *Brand Metrics* shows students the methods by which they can assess the current market position of the brand and design effective strategies for the future. Each chapter follows the same logical and accessible structure, defining each metric and its usage, presenting the calculations, showing how the data should be interpreted, offering case studies and examples, presenting recommendations and offering questions for further discussion. The metrics covered in the book correspond with the customer journey, moving through measuring brand awareness, consideration and purchase, to customer loyalty and brand advocacy, and finally an overall analysis of the*

brand's strength. The book not only shows the formula for a metric and explains how it should be interpreted, but also considers what each metric really measures, how it impacts the brand's equity and how it is related to other metrics. As such it should be perfect recommended reading for advanced undergraduate and postgraduate students of Strategic Brand Management, Marketing Planning and Strategy, Marketing and Branding Metrics.

Ежедневная общенациональная деловая газета.российская ежедневная общественно-политическая газета с усиленным деловым блоком. Выпускается Издательским домом «Коммерсантъ». Периодичность - шесть раз в неделю (с понедельника по субботу).

Through an in-depth legal analysis by leading scholars, this book searches for the exact legal causes of land-related disputes in Asia within the histories, legal systems and social realities of the respective countries. It consists of four main parts: examining the relationship between law and development; land-taking in developmental stages; common ownership; and proposals for new approaches to land law and dispute resolution. With a combination of orthodox legal interpretations and the empirical approach of legal sociology, the contributors undertake an extensive comparative legal analysis across common and civil law traditions. Most importantly, they propose pathways forward for legal transformations in the pursuit of sustainable development in Asia. This book is vital contribution to the study of comparative law, and especially property law, in East and Southeast Asia.

A Practical Guide

Dawson, Yukon Territory

This book trains students of the caring professions, across health and social care, in the basic philosophical skills and knowledge needed to deal with the ethical aspects of their profession. It shows why ethical education is required, and teaches the skills of reasoning that equip professionals to think

critically about the theories and arguments used in ethical discussions. It demonstrates how we can be confident that we can rely on common moral ground; but it also points out how we need to recognise the influence of different world-views, and to note how, on some issues, these can lead us in starkly different directions. It explains relevant philosophical theories, and evaluates their strengths and weaknesses - particularly in relation to what is required for proper professional ethics. It shows how to employ the commonly accepted framework of four ethical principles - beneficence, non-maleficence, autonomy, and justice. These various matters are then illustrated in two extended case studies, which focus on the problem of euthanasia, and the question of screening for disability and the value of human life. Ethical Basics for the Caring Professions is designed for use on all health and social care and human services courses on ethics and values. It will also be of interest to academics and professionals working within these fields.
