**This comprehensive resource provides readers with the tools necessary to perform analysis of various waveforms for use in radar systems. It provides information about how to produce synthetic aperture (SAR) images by giving a tomographic formulation and implementation for SAR imaging. Tracking filter fundamentals, and each parameter associated with the filter and how each affects tracking performance are also presented. Various radar cross section measurement techniques are covered, along with waveform selection analysis through the study of the ambiguity function for each particular waveform from simple linear frequency modulation (LFM) waveforms to more complicated coded waveforms. The text includes the Python tool suite, which allows the reader to analyze and predict radar performance for various scenarios and applications. Also provided are MATLAB® scripts corresponding to the Python tools. The software includes a user-friendly graphical user interface (GUI) that provides visualizations of the concepts being covered. Users have full access to both the Python and MATLAB source code to modify for their application. With examples using the tool suite are given at the end of each chapter, this text gives readers a clear understanding of how important target scattering is in areas of target detection, target tracking, pulse integration, and target discrimination.**

*One icy winter's evening in Budapest, a man runs straight into John Taylor as he walks home through the narrow streets. John falls over into the snow and looks up at the man's face. *A basic understanding of headspace and how it affects the proper operation of a firearm are necessary if you wish to call yourself a gunsmith. Otherwise all you will be able to do is change parts with the hope that somehow the problem will go away. The later is normally called an armorer, not a gunsmith. This booklet contains all the information a gunsmith needs in order to understand and diagnose headspace.*

*Nowhere are the big guns covered in more detail. Before Sgt. First Class Dean Michaelis (Ret.) wrote the book on sniping, he wrote a first-of-its-kind program of instruction for the Special Operations Target Interdiction Course. A member of the 1st Special Forces Group, he taught students everything they needed to know to succeed and survive. Now he brings that information to you, covering every aspect of the sniper's art: the history, equipment, skills and missions. He also includes reproducible forms, a military-issue .50-caliber cartridge tip color guide and his exclusive Program of Instruction for Special Operations Hard-Target Interdiction Course. John Nosler - Going Ballistic is the story of John Nosler - a hunter, innovator and self-taught ballistics engineer. Born in California, he came of age in the Great Depression and raced his home-built cars on the dirt tracks of Huntington Beach and Pomona. From California, he moved to Oregon and embarked on a legendary big game hunting career. He first hunted moose in Canada in the 1940s and recognized the need for a projectile that would stand up to the velocity generated by the new magnum rifle cartridges. When hunters want a bullet they can depend on, the name they trust, more than any other, is Nosler. From the Partition, introduced to the shooting public in the late 1940s, to the Zippedo, Solid Base and Ballistic Tip, to today's cutting-edge AccuBond, John Nosler built a reputation on accuracy and performance, one bullet at a time. You know his bullets, now read his story.

Forensic Firearm Examination provides the reader with a thorough understanding of theory, application, and process of firearm comparison. It is essential in the field of forensic firearm examination to not only understand the marks that examiners are observing, but more importantly learn where these marks come from during the manufacturing process. This book explores the various machining techniques utilized in the manufacturing process and the resulting marks left by those tools. This information will equip the examiner with the knowledge to answer questions posed by the legal system regarding the uniqueness or potential similarity of marks on firearms imparted to fired bullets and cartridge cases. Intended primarily for firearm and tool mark examiners, this valuable resource serves as a primary requirement for the training of firearm and tool mark examiners. Other forensic science disciplines who rely on pattern matching as a primary determining factor whether or not two objects may share a common source would also find utility in this work. Finally, it will be a valuable resource for attorneys who are seeking to understand better the scientific aspects of firearm identification. Written by a foremost expert in the field, Forensic Firearm Examination explores specific firearm manufacturing techniques and the resulting marks, which has not been covered in any book publication. Chris Monturo has over 23 years of experience as forensic firearm and tool mark examiner. Additionally, he is a distinguished member of the Association of Firearm and Tool Mark Examiners (AFTE), a past member of the Scientific Working Group for Firearm and Tool Marks (SWGUN), past member of the Organization of Scientific Area Subcommittees (OSAC) for firearm and tool marks and has instructed courses in machining for the firearm examiner in the United States and Internationally. Provides reader with a thorough understanding of theory, application, and process of firearm identification Topics include the manufacturing process of all components that interact with the bullet or case during firing, the nature of manufacturing and potential pitfalls, such as subclass

***Supported by state-of-the-art motion analysis research, "short game guru to the pros" James Sieckmann unveils his "finesse wedge" swing -- a proven and pragmatic way to learn, practice, and perform with each wedge in the bag in every situation -- and shows players that upgrading their short game is possible. Since James Sieckmann first revealed his short-game methods two decades ago, he has amassed a cultlike following of more than seventy PGA and LPGA Tour disciples and has been dubbed the "short-game guru to the pros" (GOLF Magazine). Using his system, several of Sieckmann's students have become some of the best short-game players of the modern era. A two-time winner on the PGA Tour jumped 117 spots in the Sand Save rankings in one season; another client quickly jumped 81 spots in Scrambling percentage. The benefits of a good short game are undisputed. Unfortunately, players at all levels fail to develop effective short-game skills because instructors teach the exact opposite of the correct technique. Sieckmann studied the greatest short-game players in recent memory—including Seve Ballesteros, Corey Pavin, and Raymond Floyd—to develop a proven and pragmatic way to learn, practice, and perform with each wedge in every situation. His unique observations, which were later verified by motion capture technology, work equally well for amateurs and pros. In his long-awaited first***
