

How Humans Evolved Seventh Edition

Magnum Opus: 500 pages of illuminating and inspiring poetry, prose and pictures by a life-long activist: We can awake; we can rejoice amid life's pain and darkness, and treasure light. We can learn and teach. We can build foundations for the Good New Age; it is now as though the hallways of Lascaux stand empty waiting for your brush. How can you live a good human life? That ancient question is very urgent now when we must rebuild society on wiser passions. So here's a life's work book about our human race in the world today, by a solemn worshiper of Goddess Earth; collected, enlarged and reissued constantly since 1992.

Humans possess an extraordinary capacity for culture, from the arts and language to science and technology. But how did the human mind—and the uniquely human ability to devise and transmit culture—evolve from its roots in animal behavior? Darwin's Unfinished Symphony presents a captivating new theory of human cognitive evolution. This compelling and accessible book reveals how culture is not just the magnificent end product of an evolutionary process that produced a species unlike all others—it is also the key driving force behind that process. Kevin Laland tells the story of the painstaking fieldwork, the key experiments, the false leads, and the stunning scientific breakthroughs that led to this new understanding of how culture transformed human evolution. It is the story of how Darwin's intellectual descendants picked up where he left off and took up the challenge of providing a scientific account of the evolution of the human mind.

The most complete introduction to the science of human evolution. With a signature blend of evolutionary theory, population genetics, and behavioral ecology, How Humans Evolved teaches the science and history behind human evolution. Thoroughly updated with coverage of recent research and new discoveries, the Eighth Edition offers the most visual, dynamic, and effective learning tools in its field. The Eighth Edition also includes an expanded suite of animations that help students better visualize and understand tricky concepts, as well as real-world videos and InQuizitive adaptive learning.

What is the nature of human language? How did it originate? How are different languages connected? Exploring over two thousand years of human enquiry, The Stories of Linguistics is an accessible introduction to the individuals, ideas and events that have shaped the field of linguistics. From Herodotus to Chomsky, and from philosophy to neuroscience, Kim Ballard presents a fascinating narrative that brings to life a dynamic subject with a rich history. The Stories of Linguistics: - Uses a thematic rather than a traditional chronological approach to explore the complex development of Western linguistics - Offers an accessible introduction to a field of linguistics which is attracting more and more interest - Guides readers seamlessly through linguistic history, supported by timelines and suggestions for further reading and research With its broad scope and conversational style, The Stories of Linguistics is an ideal introductory text for students at every level, as well as anyone else with an interest in the history and development of language.

Self-Domestication and Human Evolution

An Introduction to Language Study Past and Present

Descriptions in Plain English of More Than 12,000 Ingredients Both Harmful and Desirable Found in Foods

The Portal of Evolution

Evolution of Life and Form

Darwin's Unfinished Symphony

Building on her fundamental texts The Art of Acting and The Art of Speech, Dawn Langman shows how the great dramas of Western heritage illuminate the evolution of human consciousness - from the past and into the future - thus providing a context in which actors can consciously evolve their art. Having laid her foundation by exploring the Eleusis Mysteries - the seed point of Western drama - she moves to the end of the nineteenth century, when drama and performance practice prepared for its next great evolutionary leap. She explores the connection of this leap to the evolutionary threshold facing human beings at the end of what occult history calls Kali Yuga. Weaving back and forth between future, past and present - guided by the great cyclic themes of human soul and spiritual development - Langman shows how the inspiration of our greatest artists springs from a source of knowing that encompasses the high calling of the human being to mature beyond its biological inheritance, and to become a conscious co-creator with the macrocosmic powers that serve the evolution of the universe. In doing so, she clarifies the specific function drama has in our contemporary development within the spectrum of the arts. 'Building on the first two books of this extraordinary series, Langman's meta-historical analysis of drama lays the foundation for her ongoing explorations into an art of acting that takes fully into account the multidimensional nature of the human being. Here, she masterfully contextualizes the 20th century contributions of Rudolf Steiner and Michael Chekhov within the broad trajectory of the Western dramatic and theatrical tradition'. - Dr Diane Caracciolo, Associate Professor of Educational Theatre, Adelphi University, USA 'Mapping a meta-history of Western Drama, Langman unfolds a pathway for "future" actors and those who seek an understanding of the metaphysical in theatre. This work will inspire anyone interested in the psychic and spiritual evolution of human consciousness.' - Dr Jane Gilmer, freelance theatre practitioner based in New Zealand, teaching internationally

Author of the popular Primal Body, Primal Mind and widely recognized Paleo expert and nutritionist Nora Gedgudas presents a revolutionary and accessible high-fat diet for maintaining health, losing weight, and reversing some chronic diseases. Popular nutritionist Nora Gedgudas returns with advice that may sound counterintuitive: Eat fat to burn fat. In Primal Fat Burner, she explains the benefits and science behind a ketogenic (or fat-burning) diet, which switches your metabolism from a dependence on sugar to running on healthy fats. As Gedgudas reveals, numerous studies in recent years refute the long-promoted anti-saturated fat and anti-cholesterol agenda. Now, "with able, funny writing" (Booklist), Gedgudas explains the science that fat isn't always a bad thing—if you know the right kinds of fats to eat. In her comprehensible, enjoyable style, she also lays out a practical meal plan with recipes. Author of the bestselling Grain Brain, Dr. David Perlmutter writes in his foreword that Primal Fat Burner is, "Wonderfully actionable, compassionately taking the reader from 'why' to 'how.'" On this diet, you efficiently and effectively metabolize fat (ketones and free fatty acids) as your primary source of fuel, rather than glucose from carbs, starches, and sugars. Because fat is so satisfying, you naturally wind up eating less—without feelings of hunger or deprivation. And natural dietary fat is ultimately the key to feeling better, looking better, thinking clearer, and living longer. Discover all this and more healthy tips in one of the most groundbreaking nutritional books in recent time.

A distinctive feature of Philaletheians' compilations is that headings (and side captions, when available) function as subtitles: when read sequentially, they impart the salient points of the entire compilation. The value of this feature becomes apparent in long and complex analyses, where Contents double as Train of Thoughts. In this book, pages 2-18 provide an outline of the main points as well as the syllogism of propositions and further elaborations

Details the process of spiritual initiation from aspirant to the highest Adept • Explains the characteristics of each stage of initiation, including the associated psychological issues that need to be faced to move to the next stage • Explores the long history of the Mystery traditions from ancient Egypt, Babylonia, and India to the modern Theosophy of Blavatsky and Bailey • Reveals how the Brotherhood of Spiritual Adepts is increasing global tensions to prepare humanity for the Age of

Aquarius and spiritual revelation As the precessional cycle transits from Pisces to Aquarius, great shifts in spiritual evolution are on the horizon--not for all of humanity as many in the New Age movement have generously hypothesized but for those who have undertaken the necessary spiritual preparation and initiatory work. Drawing from his deep immersion in the Mystery traditions of both East and West, author J. S. Gordon investigates the initiatic path from ancient times to modern day, detailing the step-by-step process of initiation and the sequence from spiritual aspirant to the highest Adeptship. He explains the natural logic and characteristics of each stage of initiation, including the associated problems and psychological issues that need to be faced in order to move forward to the next stage. He shows how humanity is naturally inclined to spiritual evolution and the development of higher consciousness. We are part of the overall evolutionary process of Nature, a system guided by the most highly evolved Adepts and extending beyond Earth to the entire kosmos. Exploring the long history of the Mystery schools beginning with ancient Egypt, Babylonia, and India, Gordon examines the sacred metaphors and allegories of esoteric philosophy, metaphysics, occult science, and the Science of the Seven Rays as well as the Adept-inspired theosophical works of H. P. Blavatsky and A. A. Bailey. He looks at the Adept Hierarchy of the Great White Himalayan Brotherhood and considers in detail two much-discussed mysteries: The Jesus-as-Christ mystery and the Maitreya-Buddha mystery. Revealing how advancement--spiritual, scientific, and cultural--erupts out of tension, he explains how the Adepts have been increasing local and global tensions to prepare humanity for the Age of Aquarius, thereby creating the ideal preconditions for spiritual evolution and an eventual restoration of the Mysteries in our own modern era.

Climate, Clothing, and Agriculture in Prehistory

A Meta-Historical Approach to Drama - The Actor of the Future, Vol. 1

“An unforgettable journey through this twisted miracle of evolution we call ‘our body.’” —Spike Carlsen, author of *A Walk Around the Block* From blurry vision to crooked teeth, ACLs that tear at alarming rates and spines that seem to spend a lifetime falling apart, it’s a curious thing that human beings have beaten the odds as a species. After all, we’re the only survivors on our branch of the tree of life. The flaws in our makeup raise more than a few questions, and this detailed foray into the many twists and turns of our ancestral past includes no shortage of curiosity and humor to find the answers. Why is it that human mothers have such a life-endangering experience giving birth? Why are there entire medical specialties for teeth and feet? And why is it that human babies can’t even hold their heads up, but horses are trotting around minutes after they’re born? In this funny, wide-ranging and often surprising book, biologist Alex Bezzerrides tells us just where we inherited our adaptable, achy, brilliant bodies in the process of evolution.

Provides the essential foundation for psychology students, this is a revised and updated version of the most trusted introduction written by the bestselling psychology author Richard Gross. *Psychology: The Science of Mind and Behaviour* has helped over half a million students worldwide. It is the essential introduction to psychology, covering all students need to know to understand and evaluate classic and contemporary topics. - Enables students to easily access psychological theories and research with colourful, user-friendly content and useful features including summaries, critical discussion and research updates - Helps students to understand the research process with contributions from leading psychologists including Elizabeth Loftus, Alex Haslam and David Canter - Ensures students are up to date with the latest issues and debates with this fully updated edition

From his clairvoyant reading of the supersensible Akashic Record - the cosmic memory of all events, actions and thoughts - Rudolf Steiner was able to speak of aspects of the life of Jesus Christ which are not contained in the four biblical Gospels. Such research, in that it is not based on historical records or extant documents, can be spoken of as a 'Fifth Gospel'. Steiner speaks, for example, of Jesus' life in the community of the Essenes, the temptation of Christ in the wilderness, and of a significant conversation between Jesus and Mary.

Haptic perception - human beings' active sense of touch - is the most complex of human sensory systems, and has taken on growing importance within varied scientific disciplines as well as in practical industrial fields. This book's international team of authors presents the most comprehensive collection of writings on the subject published to date and cover the results of research as well as practical applications. After an introduction to the theory and history of the field, subsequent chapters are dedicated to the neuro-physiological basics as well as the psychological and clinical neuro-psychological aspects of haptic perception.

Linking Evidence, Causes, and Effects

A Consumer's Dictionary of Food Additives, 7th Edition

Being a Glace Through the Open Portal of Evolution at Some of the Mysteries of Nature

Ecological and Experimental Perspectives

Objection

Tales of Men and Women 7th Edition Ebook

An Essential Household Reference...Revised and Updated With our culture’s growing interest in organic foods and healthy eating, it is important to understand what food labels mean and to learn how to read between the lines. This completely revised and updated edition of A Consumer’s Dictionary of Food Additives gives you the facts about the safety and side effects of more than 12,000 ingredients—such as preservatives, food-tainting pesticides, and animal drugs—that end up in food as a result of processing and curing. It tells you what’s safe and what you should leave on the grocery-store shelves. In addition to updated entries that cover the latest medical and scientific research on substances such as food enhancers and preservatives, this must-have guide includes more than 650 new chemicals now commonly used in food. You’ll also find information on modern food-production technologies such as bovine growth hormone and genetically engineered vegetables. Alphabetically organized, cross-referenced, and written in everyday language, this is a precise tool for understanding food labels and knowing which products are best to bring home to your family.

This book is both an introduction and an original contribution to a study of the major evolutionary events, from the origin of life to the emergence of the human mind.

The latest edition of a popular introductory linguistics text, now including a section on computational linguistics, new non-English examples, quizzes for each chapter, and additional special topics. This popular introductory linguistics text is unique for its integration of themes. Rather than treat morphology, phonetics, phonology, syntax, and semantics as completely separate fields, the book shows how they interact. The authors provide a sound introduction to linguistic methodology, focusing on a set of linguistic concepts that are among the

most fundamental within the field. By studying the topics in detail, students can get a feeling for how work in different areas of linguistics is done. As in the last edition, part I covers the structural and interpretive parts of language—morphology, phonetics, phonology, syntax, semantics, variation, and change. Part II covers use and context of language and includes chapters on pragmatics, psychology of language, language acquisition, and language and the brain. This seventh edition has been extensively revised and updated; new material includes a chapter on computational linguistics (available in digital form and updated regularly to reflect the latest research in a rapidly developing field), more non-English examples, and a wide range of exercises, quizzes, and special topics. The seventh edition of *Linguistics* includes access to a new, web-based eCourse and enhanced eTextbook. The content from the former print supplement *A Linguistics Workbook* is now available in this online eCourse as interactive exercises. The eCourse is available via the Rent eTextbook link at <http://mitpress.mit.edu/linguistics7>, and may be used on its own for self-study or integrated with instructor-led learning management systems. The eCourse is a comprehensive, web-based eLearning solution. There is nothing to download or install; it is accessible through any modern web browser and most mobile devices. It features a singular new tool for building syntax trees, an IPA keyboard, a combination of auto-graded and essay questions, and classroom management tools. The enhanced eTextbook includes videos and flashcards and allows bookmarking, note-taking, highlighting, and annotation sharing. Access to the eCourse is free with the purchase of a new textbook or e-book. New print copies of this book include a card affixed to the inside back cover with a unique access code for the eTextbook. If you purchased an e-book, you may obtain a unique access code by emailing digitalproducts-cs@mit.edu or calling 617-253-2889 or 800-207-8354 (toll-free in the U.S. and Canada). If you have a used copy of this book, you may purchase a digitally delivered access code separately via the Rent eTextbook link at <http://mitpress.mit.edu/linguistics7>.

The 7th New Enlarged Edition of the ALL NEW Objective NCERT Xtract Biology for NEET is now available in a new 2-Color format much powerful than the previous one. •The most highlighting feature of the book is the inclusion of all the concepts from NCERT Class 11 & 12 Books in the form of ONE-LINERS Notes. •This book-cum-Question Bank spans through 38 chapters - 22 Chapters of Class 11 & 16 Chapters of Class 12 Categorized into BOTANY & ZOOLOGY. Each Chapter can be divided into 2 Parts: Part I - Learn & Revise: •Every Chapter starts with TREND BUSTER, which highlights the Most & Least Important Topics of the Chapter based upon the last 7 years Questions of NEET. •The book provides Topical NCERT ONE-LINER Notes without missing a single concept. •Another NEW INCLUSION in this edition is extract of NEET Past MCQs in the form of NEET ONE-LINERS. •Further Tips/ Tricks/ Techniques ONE-LINERS to provide additional inputs for Quick Problem Solving Part II - Practice & Excel: •This is followed by 4 types of Objective Exercises covering all variety of questions asked in NEET 1. NCERT based Topic-wise MCQs exactly as per NCERT Flow with ample amounts of MCQs 2. NCERT Exemplar & Past NEET MCQs Past Questions are categorised into Concept, Application & Skill Levels. Questions out of NCERT scope are also marked as Beyond NCERT 3. Matching, Statement & A-R type MCQs 4. Skill Enhancer MCQs/ HOTS •The book also provides 3 Mock Tests as per latest (2021) pattern for Self Assessment.. •In all the book contains 5000+ High Probability MCQs specially designed to Master MCQs for NEET •Detailed Quality explanations have been provided for all MCQs for conceptual clarity. •This book assures complete syllabus coverage by means of Concept Coverage & MCQs for all significant concepts of Biology. In nutshell this book will act as the MUST HAVE PRACTICE & REVISION MATERIAL for NEET Aspirants.

How Humans Evolved

Live Longer, Slow Aging, Super-Power Your Brain, and Save Your Life with a High-Fat, Low-Carb Paleo Diet

Human Haptic Perception

The Stories of Linguistics

The gold-standard text, with new cutting-edge genetic research

Basics in Human Evolution offers a broad view of evolutionary biology and medicine. The book is written for a non-expert audience, providing accessible and convenient content that will appeal to numerous readers across the interdisciplinary field. From evolutionary theory, to cultural evolution, this book fills gaps in the readers' knowledge from various backgrounds and introduces them to thought leaders in human evolution research. Offers comprehensive coverage of the wide ranging field of human evolution Written for a non-expert audience, providing accessible and convenient content that will appeal to numerous readers across the interdisciplinary field Provides expertise from leading minds in the field Allows the reader the ability to gain exposure to various topics in one publication

Reproduction of the original: Evolution of Life and Form by Annie Besant

Understanding the chimpanzee mind is akin to opening a window onto human consciousness. Many of our complex cognitive processes have origins that can be seen in the way that chimpanzees think, learn, and behave. The Mind of the Chimpanzee brings together scores of prominent scientists from around the world to share the most recent research into what goes on inside the mind of our closest living relative.

Intertwining a range of topics—including imitation, tool use, face recognition, culture, cooperation, and reconciliation—with critical commentaries on conservation and welfare, the collection aims to understand how chimpanzees learn, think, and feel, so that researchers can not only gain insight into the origins of human cognition, but also crystallize collective efforts to protect wild chimpanzee populations and ensure appropriate care in captive settings. With a breadth of material on cognition and culture from the lab and the field, The Mind of the Chimpanzee is a first-rate synthesis of contemporary studies of these fascinating mammals that will appeal to all those interested in animal minds and what we can learn from them.

Basics and Applications

A Philosophical Anthropology

Human Biology

Reflections on the Origins of Numinous Perception

The Mind of the Chimpanzee

An Introduction to Language and Communication

The first book on the origin of clothes shows why climate change was crucial - for the origin of agriculture too.

Why do we consider incest wrong, even when it occurs between consenting adults unable to have children? Why are words that gross us out more likely to be deemed "obscene" and denied the protection of the First Amendment? In a world where a gruesome photograph can decisively influence a jury and homosexual behavior is still condemned by some as "unnatural," it is worth asking: is our legal

system really governed by the power of reason? Or do we allow a primitive human emotion, disgust, to guide us in our lawmaking? In *Objection*, psychologists Debra Lieberman and Carlton Patrick examine disgust and its impact on the legal system to show why the things that we find stomach-turning so often become the things that we render unlawful. Shedding light on the evolutionary and psychological origins of disgust, the authors reveal how ancient human intuitions about what is safe to eat or touch, or who would make an advantageous mate, have become co-opted by moral systems designed to condemn behavior and identify groups of people ripe for marginalization. Over time these moral stances have made their way into legal codes, and disgust has thereby served as the impetus for laws against behaviors almost universally held to be "disgusting" (corpse desecration, bestiality) - and as the implicit justification for more controversial prohibitions (homosexuality, use of pornography). Written with a critical eye on current events, Lieberman and Patrick build a case for a more reasoned approach to lawmaking in a system that often confuses "gross" with "wrong."

There is scientific evidence proving evolution cannot be responsible for life on Earth. In *Evolution Impossible*, Dr. John Ashton uses discoveries in genetics, biochemistry, geology, radiometric dating, and other scientific disciplines to explain why the theory of evolution is a myth. Regardless of your level of scientific education, you will finish this book able to cite 12 reasons why evolution cannot explain the origin of life.

With this seventh edition, Noback's *Human Nervous System: Structure and Function* continues to combine clear prose with exceptional original illustrations that provide a concise lucid depiction of the human nervous system. The book incorporates recent advances in neurobiology and molecular biology. Several chapters have been substantially revised. These include Development and Growth, Blood Circulation and Imaging, Cranial Nerves and Chemical Senses, Auditory and Vestibular Systems, Visual System, and Cerebral Cortex. Topics such as neural regeneration, plasticity and brain imaging are discussed. Each edition of *The Human Nervous System* has featured a set of outstanding illustrations drawn by premier medical artist Robert J. Demarest. Many of the figures from past editions have been modified and/or enhanced by the addition of color, which provides a more detailed visualization of the nervous system. Highly praised in its earlier versions, this new edition offers medical, dental, allied health science and psychology students a readily understandable and organized view of the bewilderingly complex awe-inspiring human nervous system. Its explanatory power and visual insight make this book an indispensable source of quick understanding that readers will consult gratefully again and again.

Written for the introductory human biology course, the Seventh Edition of Chiras' acclaimed text maintains the original organizational theme of homeostasis presented in previous editions to present the fundamental concepts of mammalian biology and human structure and function. Chiras discusses the scientific process in a thought-provoking way that asks students to become deeper, more critical thinkers. The focus on health and homeostasis allows students to learn key concepts while also assessing their own health needs. An updated and enhanced ancillary package includes numerous student and instructor tools to help students get the most out of their course!

WORK SMARTER, NOT HARDER, with The Princeton Review! This revised 7th edition of our popular ACT practice question compendium contains 1,523 practice problems to help familiarize you with the exam, including both drills and full-length tests and detailed answers and explanations to better support your understanding of tricky problems. Practice Your Way to Perfection. • 3 full-length practice ACTs to prepare you for the actual testing experience • 875 additional questions (grouped by subject and equivalent in length to 3 more ACTs) to help you pinpoint your strengths and work through your weaknesses • Bonus targeted subject drills to bolster critical ACT English and Math skills Work Smarter, Not Harder. • In-depth answer explanations that help you learn by exploring every answer choice • Powerful techniques from The Princeton Review's repertoire that will help you work quickly and efficiently • Solid fundamentals that lay the groundwork for your test-taking experience Take Control of Your Prep. • Score conversion charts help to assess your current progress • Diagnostic drills that allow you to customize a study plan • Essay checklist to help you write a high-scoring response for the newest essay prompts

The Rebirth of the feminine surrounds us in many forms -- from the worldwide movement for women's rights to the resurgence of interest in the feminine spirituality of the Goddess and the Divine Mother. What is the spiritual meaning of this rebirth? What is the feminine divine? Who is she? She has had many names in many cultures: Ishtar in Babylon, Inanna in Sumeria, Athena, Hera, Demeter, and Persephone in Greece, Isis in Egypt, Durga, Kali, and Lakshmi in India. She is the Shekinah of the Kabbalists and the Sophia, or Divine Wisdom of the gnostics. For Rudolf Steiner, she is Anthroposophia, the Divine Wisdom who descended from the spiritual world and passed through humanity to become now the goal and archetype of human wisdom in the cosmos. This book contains most of Rudolf Steiner's statements on Sophia. We see him, as it were, "midwifing" the birth of the Sophia, the new Isis, divine feminine wisdom, in human hearts on earth. Each chapter explores the mystery of the different relationships of Sophia: Sophia and Isis, Sophia and the Holy Spirit, Sophia and Mary, the mother of Jesus (and Mary Magdalene), Sophia and the Gnostic Ahamod, and Sophia and the New Isis. Above all, in a remarkable way, Steiner makes clear the relationship of Christ and Sophia: Isis-Sophia, Divine Wisdom, slain by Lucifer, Carried off on wings of world-wide forces into cosmic space, The Christ-Will working in us Will wrest Her from Lucifer And on vessels of spiritual knowledge Call Isis-Sophia, Divine wisdom, to new life in human souls. Arranged in chronological order, traces the history of debates surrounding theories of human evolution from the first natural philosophers to the present day.

Psychology: The Science of Mind and Behaviour 7th Edition

How Humans Evolved Seventh Edition W. W. Norton & Company

Principles of Human Evolution presents an in-depth introduction to paleoanthropology and the study of human evolution. Focusing on the fundamentals of evolutionary theory and how these apply to ecological, molecular genetic, paleontological and archeological approaches to important questions in the field, this timely textbook will help students gain a perspective on

human evolution in the context of modern biological thinking. The second edition of this successful text features the addition of Robert Foley, a leading researcher in Human Evolutionary Studies, to the writing team. Strong emphasis on evolutionary theory, ecology and behavior and scores of new examples reflect the latest evolutionary theories and recent archaeological finds. More than a simple update, the new edition is organized by issue rather than chronology, integrating behavior, adaptation and anatomy. A new design and new figure references make this edition more accessible for students and instructors. New author, Robert Foley – leading figure in Human Evolutionary Studies – joins the writing team. Dedicated website – www.blackwellpublishing.com/lewin – provides study resources and artwork downloadable for Powerpoint presentations. Beyond the Facts boxes – explore key scientific debates in greater depth. Margin Comments – indicate the key points in each section. Key Questions – review and test students' knowledge of central chapter concepts and help focus the way a student approaches reading the text. New emphasis on ecological and behavioral evolution – in keeping with modern research. Fully up to date with recent fossil finds and interpretations; integration of genetic and paleoanthropological approaches.

Instinct and Revelation revolves around the hypothesis that ritual behavior and imaginative awareness in early hominids may have helped to spawn the evolution of the human brain and human consciousness. Using an integral perspective comparable with systems theory, the book carefully interweaves fact and theory from physical and cultural anthropology, psychobiology and the brain sciences, psychology, and to a lesser degree, eastern philosophy. This book breaks from tradition by discussing from a primarily anthropological perspective the origin of human consciousness within a philosophical framework that embraces precepts from human evolution, evolutionary psychology, the neurosciences, biocultural anthropology, and cultural symbolic anthropology.

How Humans Evolved teaches the processes that shape human evolution with a unique blend of evolutionary theory, population genetics, and behavioral ecology. The new edition continues to offer the most up-to-date research—in particular, significantly revised coverage of how recent discoveries are shaping our history of human evolution—while now giving you the best tools to engage your students in and out of the classroom.
