In Insects, early readers learn about the defining characteristics of this animal group. Vibrant, full-color photos and carefully leveled text will engage early readers as they discover what features set these animals apart. A labeled diagram helps readers identify body parts of an insect, while a picture glossary reinforces new vocabulary. Children can learn more about insects online using our safe search engine that provides relevant, age-appropriate websites. Insects also features reading tips for teachers and parents, a table of contents, and an index. Insects is part of Jump!'s Animal Classification series.

It's easy to sketch accurate, character-filled likenesses of dogs, and this book will show you how to draw 30 different types of canines: hunting, working, sporting, hounds, terriers, and other kinds of dogs. You'll discover how combining circles, ovals, rectangles, and other simple forms results in realistic depictions of a beagle, cocker spaniel, collie, Dalmatian, Old English sheepdog, golden retriever, and 24 other breeds. If you like, you can even create your own fantasy dogs by combining heads, bodies, tails, and legs from different breeds. Each of the step-by-step guides includes a blank practice page as well as a short description of the breed. The finished drawings are great for coloring, too.

You can get FREE bonus book. All the information you will find on the last page. Yes, ideas! Ideas are beginnings, and they can be very fundamental in the realization of greater things. And so, this book could not only be used to serve as a resource of ideas for all you artists around and those who have the advanced set of skills in drawing, but also for those who are trying to discover the artist in them and to find their path in the realm of drawing. So, you might be thinking why you see a lot of words and letters on this page and in this book, so to speak, when this is a book of drawing. Well, you see, artists don't always talk with their brush or pencil. Non-drawers aren't forbidden to read this book, or else, this would be ridiculous. So, this is for all who can see and read. This can be a beginner's book on drawing as a few basics are also found in here. But as the title suggests, this is also book of ideas. Ideas are like little drops of water that later brings forth streams and rivers that nourishes life, both inanimate and animate, like the flowers and the trees and the insects that dwell around. Simple lines and circles make up something that can either please the eye and the soul, but sometimes they can also upset. Insects can be fascinating but also creepy. So, as a matter of precaution, this book may not be appropriate for those who are entomophobic, or those who fear of insects a lot. For those who are not, drawing insects can be fun. And by art, which means an expression of creative skill and imagination, this book is by no means intended to urge you what to do or not to do or to help you make a copy of these little creepy-crawlies around you, but hope to contribute to your imagination a little of something, from which you can build your own idea or even inspire you to make your own. Drawing insects brings about the artist in you and at the same time, gets you in touch with science too. It could also be a mental exercise and a good way to communicate your ideas as well. In whatever way you use drawing for, there can always be an effect, more or less, in you as the artist and on the viewer as well. With this fun, instructive sticker activity book, kids can learn about a dozen cold-blooded creatures from around the world: the Galápagos tortoise, crocodile, chameleon, regal horned lizard, and more.

A step-by-step methodology on learning to re-create all types of insects with pencil or pen and paper, this book is a great source of ideas and an inspiration for anyone wanting to draw these fascinating and intricate creatures. From the weird to the wonderful—including a ladybug, a butterfly, a mantis, a dragonfly, a wasp, a glowworm, and more—this workbook has no text, but is rather a visual and practical approach that allows artists to build their drawings in clear, simple stages. The dozens and dozens of two-color line drawings highlight every stage of the process, giving artists, no matter their experience level, the confidence needed to create their own drawings.

Members of the insect class often get a bad rap. People swat at them, stomp on them, and go to great lengths to repel them. Though some insects are pests that spread disease, many are actually helpers, pollinating plants and eating other insects that wreak havoc.

Hedges and field margins are important wildlife habitats and deliver a range of ecosystem services, and their value is increasingly recognised by ecologists. This book reviews and assesses the current state of research on hedgerows and associated field margins. With the intensification of agriculture in the second half of the last century, field sizes were increased by amalgamation and the rooting out of hedges, synthetic pesticide and inorganic fertiliser use increased, and traditional methods of hedge management were largely abandoned. The book is split into two main sections. The first deals with definitions, current and historic management, the impact of pesticides, the decline in hedge stock and condition, and new approaches to hedge evaluation using remote sensing techniques. The second section explores the pollination and biological pest control benefits provided by hedges and field margins and examines the ecology of some of the major groups that are found in hedgerows and field margins: butterflies and moths, carabid beetles, mammals, and birds. A case study on birds and invertebrates from a research farm managed as a commercial enterprise, but which attempts to farm with wildlife in mind, brings these themes together. A final chapter introduces the neglected area of hedges in the urban environment. The book will be of great interest to advanced students, researchers and professionals in ecology, agriculture, wildlife conservation, natural history, landscape, environmental and land management.
