These days, navigation is often associated with "asking" Google Maps for directions. Over one billion people per month use Google Maps and Google estimates that one-in-three mobile searches are location-related. What do spatial information practices look like in these everyday information contexts? York, Amsterdam and London, and asked for directions, requesting they draw directional instructions for me. In total, I collected 220 sets of drawings, corresponding observational fieldnotes, and 20 interviews. Following collection, I used visual grounded theory and situational analysis to assess the data from the interdisciplinary theoretical perspective of everyday life information seeking and critical information studies research. Findings show the complexity of everyday wayfinding, negotiated through the tacit and material forms of technological interventions, urban configurations, and information affects. I present the findings through a qualitative account of these modalities at play on the ground. The empirical findings build a theoretical framework
