What does it mean to become a man in the Arctic today? Becoming Innumarik focuses on the lives of the first generation of men born and raised primarily in permanent settlements. Forced to balance the difficulties of schooling, jobs, and money that are a part of village life with the conflicting demands of older generations and subsistence hunting, these men struggle to chart their life course and become innumariit - genuine people. Peter Collings presents an accessible, intelligent, humorous, and sensitive account of Inuit men who are no longer youths, but not yet elders. Based on over twenty years of research conducted in Ulukhaktok, Northwest Territories, Becoming Innumarik is a profound and nuanced look at contemporary Inuit life that shows not just what Inuit men do, but who they are. Collings recounts experiences from his immersion in the daily lives of Ulukhaktok's men - from hunting and sharing meals to playing cards and grocery shopping - to demonstrate how seemingly mundane activities provide revelations about complex issues such as social relationships, status, and maturity. He also reflects on the ethics of Immersive anthropological research, the difficulties of balancing professional and personal relationships with informants, and the nature of knowledge in Inuit culture. Becoming Innumarik shows that while Inuit born into a modern society see themselves as different from their parents' generation, their adherence to traditional ideas about life ensures that they remain fully Inuit even as their community has witnessed drastic upheaval. Aerodynamics has never been more central to the development of cars, commercial vehicles, motorbikes, trains and human powered vehicles, driven by the need for efficiency: reducing carbon dioxide emissions, reducing fuel consumption, increasing range and alleviating problems associated with traffic congestion. Reducing vehicle weight makes it more challenging to ensure that they are stable and handle well over a wide range of environmental conditions. Lighter structures are also more vulnerable to aerodynamically induced vibration. Alongside this, customers demand an environment that is quiet, comfortable and maintains their vision of the world around them in all weathers. These aims must be met by designing vehicles that engage customers emotionally, promoting the brand values of manufacturers and operators. This can only be done by collaboration between designers and aerodynamicists. Examine the latest developments in vehicle aerodynamic development Explore opportunities to network and share experiences around different areas Focus on future challenges and the engineering knowledge and technology required to resolve them Discuss other areas of development including handling and stability, tyre aerodynamics and modelling, aeracoustics and fluid structure interaction

Virtual and augmented reality raise significant questions for law and policy. When should virtual world activities or augmented reality images count as protected First Amendment "speech", and when are they instead a nuisance or trespass? When does copying them infringe intellectual property laws? When should a person (or computer) face legal consequences for allegedly harmful virtual acts? The Research Handbook on

the Law of Virtual and Augmented Reality addresses these questions and others, drawing upon free speech doctrine, criminal law, issues of data protection and privacy, legal rights for increasingly intelligent avatars, and issues of jurisdiction within virtual and augmented reality worlds.

The introduction of consumer-level head-mounted devices (HMDs) has led to a major drop in the application costs of virtual reality (VR), making the technology available for a wide range of users. To understand if VR HMDs can be used for planning and training in the context of manual order picking, this thesis provides the results of a large-scale randomized controlled study in which order picking has been compared between a virtual and a real environment. The results imply that VR HMDs can indeed be used by manufacturers and warehouse operators in a rack planning process if the reduction of searching times or the perceived workload is in focus. Additionally, the findings enable the use of VR HMDs for scientific research on human-centred rack design. Finally, the thesis highlights the usability of VR HMDs for training manual order picking activities.

Expanding HTC services is a key activity for national programmes in order to achieving universal access to prevention, treatment and care. As services are scaled up and more resources are invested in HTC, national programmes must be able to establish standards, and ensure the quality of and coverage with HTC services among populations with the greatest need. An effective HTC programme will result in a larger number of people with HIV receiving an early diagnosis of, and care and treatment for, HIV. Focusing HTC services on those who are most vulnerable to acquiring HIV also presents an important opportunity for prevention counselling and referral to prevention services. As in any programme, achieving these objectives requires a minimum, reliable set of data to guide the efficiency and effectiveness of service implementation. The purpose of this guide is to describe a set of indicators that can be used by national AIDS programmes to monitor and evaluate their HTC services. The guide aims to be as comprehensive as possible including HTC indicators that are relevant to other areas of work where HTC is a key intervention, such as services for prevention of mother to child transmission and TB. Several of the indicators are new and require field testing, this is why the guide has been presented as a field test version and it will be revised following field testing of new indicators.
