This is one of the very few titles on a very important topic, finding risk management solutions for real-estate markets. The book combines facts and intuition with robust financial techniques. The book is written for the upper undergraduate and postgraduate level and it assumes basic knowledge in statistics and financial modelling. Loving the Unloved of Society "I realize that God brought me into this world, blessed with skills and talents. The only thing that makes sense to me is to use them in the service of the poor. It is at their feet that I find myself." For almost ten years, Gary Smith, S.J., lived and worked among the poor of Portland, Oregon. With this memoir, he invites us to walk with him and meet some of the abandoned, over-looked, and forgotten members of our society with whom he has shared his life. Just as Smith found a deeper, truer understanding of himself and of the heart of God through his work, these people and their stories stand to transform us. "Although its subject matter is bleak, the book is not. Smith has found love amid the despair. His book is touching, at times hopeful, and the kind of book that is hard to put down, that fascinates, horrifies, and rivets one's attention." —Booklist "Smith takes us where we would rather not go, the heart of the poor, the lonely, and the abandoned. In true Ignatian fashion, he finds God there. An unforgettable experience for those who have the courage to walk with him." —Michael L. Cook, S.J., Professor of Theology Gonzaga University "Smith performs modern-day miracles of compassion, and his book sets a new standard for writing about the rich faith of those who are materially poor. His stirring prose and utter honesty will change the hearts and minds of many readers." —Gerald T. Cobb, S.J. Chair, department of English Seattle University

The critical theory tradition has, since its inception, sought to distinguish its perspective on society by maintaining that persons have a deep-seated interest in the free development of their personality—an interest that can only be realized in and through the rational organization of society, but which is systematically stymied by existing society. And yet tradition has struggled to specify this emancipatory interest in a way that is neither excessively utopian nor accommodating to existing society. Despite the fact that Hegel's concept of reconciliation is normally thought to run ground on the latter horn of this dilemma, this book argues that reconciliation is the best available conceptualization of emancipatory interest. Todd Hedrick presents Hegel's idea of freedom as something actualized in individuals' lives through their reconciliation with how society shapes their roles, prospects, and sense of self; it presents reconciliation as less a matter of philosophical cognition, and more of inclusion in a responsive, transparent political process. Hedrick further introduces the concept of *reification*, which—through its development in Marx and Lukacs, through Horkheimer and Adorno—substantiates an increasingly cogent critique of reconciliation as something unachievable within the framework of modern society, as social forces that shape our identities and life prospects come to appear natural, as part of the way things just are. Giving equal weight to psychoanalysis and legal theory, this work critically appraises the writings of Rawls, Honneth, and Habermas as efforts to spell out a reconciliation more democratic and inclusive than Hegel's, yet still sensitive to the reifying effects of legal systems that have become autonomous and anonymous.

Written by psychologists, historians, and lawyers, this handbook demonstrates the central role psychological science plays in addressing some of the world's most pressing problems. Over 100 experts from around the world work together to supply an integrated history of human rights and psychological science using a rights and strengths-based perspective. It highlights what psychologists have done to promote human rights and what continues to be done at the United Nations. With emerging visions for the future uses of psychological theory, education, evidence-based research, and best practices, the chapters offer advice on how to advance the 2030 Global Agenda on Sustainable Development. Challenging the view that human rights are best understood through a political lens, this scholarly collection of essays shows how psychological science may hold the key to nurturing humanitarian values and respect for human dignity.

Since President John Magufuli came to power in 2015, the space for media, the opposition, and civil society to conduct activities in Tanzania has shrunk dramatically. The government has passed new legislation and enforced existing laws that repress independent reporting and restrict the work of media, civil society organizations and political opposition groups. The government has also cracked down on individuals and nongovernmental organizations (NGOs) that are critical of government policy. The growing restrictions on speech and association are particularly worrisome as elections, scheduled for 2020, approach.This report documents how authorities have stepped up censorship of the media and arbitrarily arrested and, in some cases, prosecuted journalists and activists perceived to be government critics. They have also exerted tighter control over NGOs and political opposition parties. The repression has effectively silenced critics and activists. The report calls on the Tanzanian government to take steps to protect the rights of freedom of expression and association, particularly ahead of elections, including by refraining from public rhetoric hostile to human rights issues; urgently reversing the pattern of repression and taking measures to stop the arbitrary arrest and harassment of journalists, NGO representatives and other activists, and political opposition members; and reforming repressive laws.

Transference-Focused Psychotherapy for Borderline Personality Disorder: A Clinical Guide presents a model of borderline personality disorder (BPD) and its treatment that is based on contemporary psychoanalytic object relations theory as developed by the leading thinker in the field, Otto Kernberg, M.D., who is also one of the authors of this insightful manual. The model is supported and enhanced by material on current phenomenological and neurobiological research and is grounded in real-world cases that deftly illustrate principles of intervention in ways that mental health professionals can use with their patients. The book first provides clinicians with a model of borderline pathology that is essential for expert assessment and treatment planning and then addresses the empirical underpinnings and specific therapeutic strategies of transference-focused psychotherapy (TFP). From the chapter on clinical assessment, the clinician learns how to select the type of treatment on the basis of the level of personality organization, the symptoms the patient experiences, and the areas of compromised functioning. In order to decide on the type of treatment, the clinician must examine the patient's subjective experience (such as symptoms of anxiety or depression), observable behaviors (such as investments in relationships and deficits in functioning), and psychological structures (such as identity, defenses, and reality testing). Next, the clinician learns to establish the conditions of treatment through negotiating a verbal treatment contract or understanding with the patient. The contract defines the responsibilities of each of the participants and defines what the reality of the therapeutic relationship is. Techniques of treatment interventions and tactics to address particularly difficult clinical challenges are addressed next, equipping the therapist to employ the four primary techniques of TFP (interpretation, transference analysis, technical neutrality, and use of countertransference) and setting the stage for and guiding the proper use of those techniques within the individual session. What to expect in the course of long-term treatment to ameliorate symptoms and to effect personality change is covered, with sections on the early, middle, and late phases of treatment.

This material prepares the clinician to deal with predictable phases, such as tests of the frame, impulse containment, movement toward integration, episodes of regression, and termination. Finally, the text is accompanied by supremely instructive online videos that demonstrate a variety of clinical situations, helping the clinician with assessment and modeling critical therapeutic strategies. The book recognizes that each BPD patient presents a unique treatment challenge. Grounded in the latest research and rich with clinical insight, Transference-Focused Psychotherapy for Borderline Personality Disorder: A Clinical Guide will prove indispensable to mental health professionals seeking to provide thoughtful, effective care to these patients.

The book examines the history of criminal justice, and the criminal process in the United States, and the criminal process in the United Kingdom. It analyzes how the criminal justice system regulates health care practice, and to what extent it can and should be used as a tool to resolve ethical conflict in health care. For most of the twentieth century, criminal courts were engaged in matters relating to medicine principally as a forum to resolve ethical controversies over the sanctity of life. However, the judiciary approached this function with reluctance and marked tendency to defer to the medical profession to define what constituted ethical, and thus lawful conduct. However, over the past 25 years, criminal courts have increasingly been drawn into these types of question, and the criminal law has become a major actor in the resolution of ethical conflict. The trend to prosecute for aberrant professional conduct or medical malpractice and the role of the criminal process in medicine has been analytically neglected in the UK. There is scant literature addressing the appropriate boundaries of the criminal process in resolving ethical conflict, the theoretical legal analysis of the law's relationship with health care, or the practical impact of the criminal justice system on professionals and the delivery of health care in the UK. This volume addresses these issues via a combination of theoretical analyses and key case studies, drawing on the experiences of other carefully selected jurisdictions. It places a particular emphasis on the appropriateness of the involvement of the criminal justice system in health care, the limitations of this developing trend, and solutions to the problems it throws up. The book takes enthusiasm as a primary example of the issues raised by the intersection of health care and the criminal law, and questions whether health care issues appropriately fall within the remit of the criminal justice system.

This book summarizes recent advances in the work on agenda-setting in a comparative perspective. The book first presents and explains the data-gathering effort undertaken within the Comparative Agendas Project over the past ten years. Individual country chapters then present the research undertaken within the many national projects. The third section illustrates the possibilities and directions for new research in comparative public policy using the data presented in this book. All the data used and discussed in the book is moreover publicly available. The book represents a significant contribution to the study of comparative public policy. By introducing a unified research infrastructure it opens up new possibilities for both empirical and theoretical research in this area.

Most aviation accidents are attributed to human error, pilot error especially. Human error also greatly effects productivity and profitability. In his overview of this collection of papers, the editor points out that these facts are often misinterpreted as evidence of deficiency on the part of operators involved in accidents. Human factors research reveals a more accurate and useful perspective: The errors made by skilled human operators - such as pilots, controllers, and mechanics - are not root causes but symptoms of the way industry operates. The papers selected for this volume have strongly influenced modern thinking about why skilled experts make errors and how to make aviation error resilient.

Every day in the United States, over two million men, women, and children step into an aircraft and place their lives in the hands of strangers. As anyone who has ever flown knows, modern flight offers unparalleled advantages in travel and freedom, but it also comes with grave responsibility and risk. For the first time in its history, the Federal Aviation Administration has put together a set of easy-to-understand guidelines and principles that will help pilots of any skill level minimize risk and maximize safety while in the air. The Risk Management Handbook offers full-color diagrams and illustrations to help students and pilots visualize the science of flight, while providing straightforward information on decision-making and the risk-management process.

Exposure to potentially traumatic events puts individuals at risk for developing a variety of psychological disorders; the complexities involved in treating them are numerous and have serious repercussions. How should diagnostic criteria be defined? How can we help a client who does not present with traditional PTSD symptoms? The mechanisms of human behavior need to be understood and treatment needs to be tested before we can move beyond traditional diagnostic criteria in designing and implementing treatment. No better guide than Retraumatization exists to fulfill these goals. The editors and contributors, all highly regarded experts, accomplish six objectives, to: define retraumatization outline the controversies related to it provide an overview of theoretical models present data related to the frequency of occurrence of different forms of trauma detail the most reliable strategies for assessment to provide an overview of treatments. Studies of African-derived religious traditions have generally focused on their retention of African elements. This emphasis, says Dianne Stewart, slights the ways in which communities in the African diaspora have created and formed new religious meaning. In this fieldwork-based study Stewart shows that African people have been agents of their own religious, ritual, and theological formation. She examines the African-derived and African-centered traditions in historical and contemporary Jamaica. Myal, Obeah, Native Baptist, Revival/Zion, Kumina, and Rastafari, and draws on them to forge a new womanist liberation theology for the Caribbean.

The earlier that children develop a love for physical activity, the better able they are to acquire the healthy habits that will serve them well throughout their lives. Moving With Words & Actions is designed to help them develop that critical physical literacy. Moving With Words & Actions offers early childhood and physical education teachers more than 70 lesson plans that can be used immediately or can be used as models for creating additional lessons. The plans reinforce both physical literacy and language literacy: they use words related to children's academic learning and understanding of their immediate environment to entice them to move. The lesson plans • Use an interdisciplinary approach, integrating academic concepts from language arts, math, science, health and nutrition, community awareness, and environmental awareness • Are highly adaptable for various settings, including those working with individualized education programs and 504 accommodation plans as well as those teaching in limited spaces • Offer great noncompetitive activities that are perfect for use by recess, lunchtime, and before- and after-school specialists • Have been field tested according to best practices to ensure age appropriateness • Each lesson plan includes three learning tasks that help children apply a variety of action words and movement concepts to the moderate- to vigorous-intensity physical activities prescribed in the tasks. Most tasks are easy to implement, requiring no equipment or specialized setting. What's more, all lesson plans address

SHAPE America's National Standards and Grade-Level Outcomes for K-12 Physical Education, so preschool children will have a head start on their kindergarten learning. This SHAPE America book, based on the authors' classic Movement-Based Learning, has been completely revamped with new lessons and new material to reflect current research, address the new standards and outcomes, and emphasize physical literacy. Part I offers expert guidance in selecting age-appropriate content, creating and implementing lesson plans, making the most of every lesson, and assessing your students' learning and progress. In part I, you'll explore the importance of words in young children's lives and learn what constitutes an appropriate learning task and how that understanding should inform your teaching. These chapters also highlight two primary instructional strategies for this age group, identify five teaching practices to help student teachers create preservice lessons, and outline three assessment techniques for teachers in early-childhood settings. Part II supplies the lesson plans themselves, categorized by these units: • Healthy Bodies (examining body parts and the ways they move) • Our Community (enhancing children's understanding of community helpers in familiar roles) • Living Creatures (helping children appreciate animals by imitating their movements, behaviors, and characteristics) • Science and Math (using action rhymes, riddles, and games to learn math and science concepts) • Language Arts (expanding on children's language arts and movement vocabularies with alphabet challenges, action poems, movement riddles, and more) Moving With Words & Actions will help you plan lessons with confidence, use sound instructional strategies, and assess your students effectively as they learn how their bodies function, move, and grow in healthy ways. Children will enjoy the movement activities, which are fun in and of themselves; but, more importantly, they will be taking a solid first step toward becoming physically literate learners who will gain the knowledge, skills, and confidence they need to move with competence in multiple environments and lead active lives.

The Third Reich met its end in the spring of 1945 in an unparalleled wave of suicides. Goeschel analyses the Third Reich's self-destructiveness and the suicides of ordinary people and Nazis in Germany from 1918 until 1945, including the mass suicides of German Jews during the Holocaust.

The Institute of Medicine study Crossing the Quality Chasm (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. Health Professions Education: A Bridge to Quality is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.
