Pulmonary Circulation provides physicians with a better understanding of the structure and function and pathophysiology of the pulmonary circulation. It provides comprehensive coverage from diagnosis and clinical evaluation of patients with pulmonary hypertension to imaging techniques, disorders and treatment. This new edition incorporates the latest clinical, pathophysiological and pathological research on pulmonary circulatory disorders. In particular, it provides greater emphasis on the role of the right ventricle in pulmonary vascular disease, updated knowledge on pathobiology and genetics, and includes new material related to imaging and other diagnostic modalities. This edition also reflects new classifications and all the recommendations from the 2013 World Conference on Pulmonary Circulation as well as current guidelines from the European Society of Cardiology and the European Respiratory Society. Thoroughly updated and up with the brisk pace of discovery and emerging therapies, the book remains an essential resource by providing a balance between scientific review and clinically relevant guidelines for the busy practicing physician.

This book is designed to meet the needs of nurse practitioners, advanced practice nurses and also physician assistants, working in urology. The full range of domains of practice is covered, including assessment and diagnosis, clinical management, nurse practitioner and patient relationships, consultation, health promotion and disease prevention, practice management and research. Some background knowledge is assumed regarding the normal anatomy and physiology of the genitourinary system and the pathophysiology underlying specific urologic health-related problems. The Nurse Practitioner in Urology will be invaluable in ensuring that the nurse practitioner is able to maintain excellent management of patients with acute and chronic urologic conditions in a wide variety of settings, including independent practices, hospitals, and academic urologic practices. It explains fully the role of the nurse practitioner as a skilled clinician in urology, bridging nursing and medical management and capable of managing many chronic nonoperative urologic conditions while recognizing those conditions which may benefit from surgical management. As populations continue to age worldwide, there is no doubt that the provision of advanced urologic care by nurse practitioners is an area that will continue to expand, benefiting from additional training and expertise. ?

In the three decades of its existence, the annual Going Romance conference has proved out to be the major European discussion forum for theoretically relevant research on Romance languages where current theoretical ideas about language in general and on Romance languages in particular are exchanged. The twenty-ninth Going Romance conference was organized by the Radboud University and took place in December 2007 in Nijmegen. The present volume contains a selection of 18 peer-reviewed articles dealing with syntax, phonology, morphology, semantics and acquisition of the Romance languages. They represent the wide range of topics at the conference and the variety of research carried out on Romance languages within theoretical linguistics and with particular interest to scholars in Romance and in general linguistics.

This volume is the first major production of the globalisation research strand of

Centre for Educational Research at Western Sydney University. This book makes significant contribution to the theory of and research in globalisation and education. It tackles the topics of superdiversity and supercomplexity. The book's thesis is that the effects of globalisation on education can only be understood if the specific yet complex conditions of globalisation in education are investigated. The book takes an interdisciplinary approach to understanding globalisation and does not restrict itself to just one methodological or theoretical plane of investigation. Education is one of these fields. The domains in which the effects of superdiversity cannot be dismissed, minimized or ignored. The continuously increasing complexity of learning environments is raising critical questions at every level, from description over analysis to theoretical generalization, and this book is a first and fruitful attempt at charting these waters. This pioneering book will be a key text for many years to come. Jan Bloomaert Professor of Language, Culture and Globalization and Director of the Babylon Center Tilburg University, the Netherlands. This provocative collection works from two premises: that today there is superdiversity in our globalised world and related is a supercomplexity of theoretical and methodological approaches. The collection proffers multifarious challenges for educational theory, research and practice in working with, through and across these two premises. *Super Dimensions in Globalisation and Education* is essential reading for all educational researchers, whatever their interests or location. Professor Bob Lingard The University of Queensland, Australia. This is a highly imaginative book that stops 'flat earth' convergence arguments dead in their tracks. Its genius is to bring super-complexity and super-diversity into a conversation with each other and with education, and in doing so shed light on the numerous and unexpected ways in which global processes are affecting education in revealing and compelling ways. Any scholar concerned with globalisation and education will find *Super Dimensions in Globalisation and Education* a 'must' on their reading list. Professor Susan Robertson Director of the Centre for Global Education and Social Futures University of Bristol, UK. This is an absorbing and compelling collection. It takes readers on a kaleidoscopic journey through various and intricate expressions of the nexus between globalisation and education. And it offers multiple ways that such expressions can be thought and rethought. In transcending conventional categorisations it invites educators to do so too. Professor Jane King Australian Professorial Fellow – Australian Research Council, Education Faculty, Monash University, Australia.

'This informative and wide-ranging book argues persuasively for the value of multiple perspectives, both international and disciplinary, in the study and practice of early childhood education, because they feed our imaginations and provoke us to think. And while illustrating the many differences that exist between countries, it highlights the shared issues confronting us, wherever we live.' - Emeritus Professor Peter Moss, Institute of Education, University of London

Stemming from original research in the field, a range of expert contributors explore the key themes and debates surrounding international perspectives on Early Childhood Education and Care (ECEC). Drawing on studies carried out in Norway, Mexico, France, Hungary and many more countries, the book covers a wide range of topics including: the relationship between early childhood and primary education gender and play in ECEC curriculum inclusion early interventions working with families place-based learning With case studies, detailed suggestions for further reading at different levels and discussion points, this is a key text for students of Early Years at all levels, from Foundation Degree to Masters, as well as current early years practitioners. Linda Miller is Professor Emeritus of Early Years, The Open University. Claire Cameron is Senior Reader in Education at the Thomas Coram Research Unit, Institute of Education, University of London.

This book provides an up-to-date overview of the main areas of the sociolinguistics of sign languages.

This open access book documents and analyses the various interventions – legal, political, and even artistic – that followed the Ali Enterprises factory fire in Karachi, Pakistan, in 2012. It illuminates the different substantive and procedural aspects of the legal proceedings and negotiations between the various local and transnational actors implicated in the Ali Enterprises fire, as well as the legal and policy reforms sparked by

the incident. This endeavour serves to embed these legal cases and reform efforts in the larger context of human and labour rights protection and global value chain governance. It also offers a concrete case study relevant for ongoing debates around the role of transnational approaches in making human rights litigation, advocacy, and law reform more effective. In this regard, the book interrogates and critically reflects on such legal campaigns and local and transnational reform work with a view to future transformative legal and social activism.

Comparative, International and Global Justice: Perspectives from Criminology and Criminal Justice presents and critically assesses a wide range of topics relevant to criminology, criminal justice and global justice. The text is divided into three parts: comparative criminal justice, international criminology, and transnational and global criminology. Within each field are located specific topics which the authors regard as contemporary and highly relevant and that will assist students in gaining a fuller appreciation of global justice issues. Authors Cyndi Banks and James Baker address these complex global issues using a scholarly but accessible approach, often using detailed case studies. The discussion of each topic is a comprehensive contextualized account that explains the social context in which law and crime exist and engages with questions of explanation or interpretation. The authors challenge students to gain knowledge of international and comparative criminal justice issues and think about them in a critical manner. It has become difficult to ignore the global and international dimensions of criminal justice and criminology and this text aims to enhance criminal justice education by focusing on some of the issues engaging criminology worldwide, and to prepare students for a future where fields of study like transnational crime are unexceptional. This book defines engagement for the field of language learning and contextualizes it within existing work on the psychology of language learning and teaching. Chapters address broad substantive questions concerned with what engagement is or looks like, and how it can be theorized for the language classroom; methodological questions related to the design, measurement and analysis of engagement in language classrooms and beyond; as well as applied issues examining its antecedents, factors inhibiting and enhancing it, and conditions fostering the re-engagement of language learners who have become disengaged. Through a mix of conceptual and empirical chapters, the book explores similarities and differences between motivation and engagement and addresses questions of whether, how and why learners actually do exert effort, allocate attention, participate and become involved in tangible language learning and use. It will serve as an authoritative benchmark for future theoretical and empirical research into engagement within the classroom and beyond, and will be of interest to anyone wishing to understand the unique insights and contributions the topic of engagement can make to language learning and teaching.

China has become one of the fastest-growing economies ever seen in the world in recent times. In the last three decades, China has transformed itself from a command economy to a market one, albeit a nominally socialist one, and its management systems have been reformed accordingly. In the light of these changes, Malcolm Warner, one of the leading authorities on management in China, explores the past, present and future of Chinese management. The first part of the work examines the history of management practices in the 'Middle Kingdom', outlining the influence of traditional Chinese values, especially the Confucian inheritance, and the legacy of the imperial bureaucracy with its meritocratic examination system, as well as the role of industrialization and the influx of foreign-owned businesses in the late nineteenth century and the twentieth century. It next goes on to consider the current state of China's management, showing how a new breed of manager has evolved since the beginning of Deng Xiaoping's reforms in the late 1970s and 1980s. The resulting impact of this strategy which has continued into the 1990s and the 2000s, up to the present day, is then examined. The final part of the book concludes with reflections on how management in China is likely to develop in the near future, especially on how far it will converge with global practices or to what degree an indigenous form of management 'with Chinese characteristics' will prevail.

The Amazon and Orinoco basins in northern South America are home to the highest concentration of freshwater fish species on earth, with more than 3,000 species allotted to 564 genera. Amazonian fishes include piranhas, electric eels, freshwater stingrays, a myriad of beautiful small-bodied tetras and catfishes, and the largest scaled freshwater fish in the world, the pirarucu. Field Guide to the Fishes of the Amazon, Orinoco, and Guianas provides descriptions and identification keys for all the known genera of fishes that inhabit Greater Amazonia, a vast and still mostly remote region of tropical rainforests, seasonally flooded savannas, and meandering lowland rivers. The guide's contributors include more than fifty expert scientists. They summarize the current state of knowledge on the taxonomy, species richness, and ecology of these fish groups, and provide references to relevant literature for species-level identifications. This richly illustrated guide contains 700 detailed drawings, 190 color photos, and 500 distribution maps, which cover all genera. An extensive and illustrated glossary helps readers with the identification keys. This handbook offers a theoretical foundation for the adaptation of Parent-Child Interaction Therapy (PCIT) for children with autism spectrum disorder (ASD) and their families. The volume examines current treatments for children with ASD and provides a rationale for why PCIT is considered a strong option to address many of the concerns found within this population of children and families. It presents an overview of PCIT theory, the goals of PCIT, the unique aspects of the treatment, and the exceptional outcomes. The handbook demonstrates the versatility of PCIT in conjunction with standard science-based therapies in addressing specific behavioral problems in this young population. Chapters provide a theoretical basis for PCIT, the empirical evidence for its efficacy, clinical considerations, and training issues. Chapters also offer a selection of case studies that help illustrate how PCIT has been successful in treating children with autism. The handbook concludes by identifying the gaps that need to be addressed by future research. Topics featured in the Handbook include: A clinical description of Parent-Child Interaction Therapy. The effects of medication for individuals with ASD. The importance of parent-child interactions in social communication and development. Teaching complex social behavior to children with ASD. Internet-delivered PCIT (I-PCIT) for children with autism. Child-Directed Interaction treatments for children with ASD. Parent-Directed Interaction treatments for children on the autism spectrum. The Handbook of Parent-Child Interaction Therapy for Children on the Autism Spectrum is a must-have resource for researchers, professors, clinicians/practitioners/therapists, and graduate students across many interrelated disciplines, including child and school psychology, behavioral therapy, social work, child and adolescent psychiatry, pediatrics, and family studies as well as occupational therapy, physical therapy, behavior analysis, and speech therapy.

Digital technologies are changing the way that surgeons operate. They are revolutionizing the ability of surgeons to visualize, plan, and create rapid prototyped models and patient-specific implants for the broad disciplines of ENT, plastic, oral and maxillofacial surgeons. This book provides information on the latest digital technologies available for craniomaxillofacial surgery, discussing how this technology allows for preplanned procedures with improved and superior outcomes. Rather than improvise during surgery, surgery and its procedures can be preconceptualized with superior outcomes and decreased patient morbidity.

This foundational work comprehensively examines the current state of the genetics, genomics and brain circuitry of psychiatric and neurological disorders. It consolidates discoveries of specific genes and genomic regions associated with these conditions, the genetic and anatomic architecture of these syndromes, and addresses how recent advances in genomics are leading to a reappraisal of the biology underlying clinical neuroscience. In doing so, it critically examines the promise and limitations of these discoveries toward treatment, and to the interdisciplinary nature of understanding brain and behavior. Coverage includes new discoveries regarding autism, epilepsy, intellectual disability, dementias, movement disorders, language impairment, disorders

of attention, schizophrenia, and bipolar disorder. Genomics, Circuits, and Pathways in Clinical Neuropsychiatry focuses on key concepts, challenges, findings, and methods in genetics, genomics, molecular pathways, brain circuitry, and related neurobiology of neurologic and psychiatric disorders. Provides interdisciplinary appeal in psychiatry, neurology, neuroscience, and genetics Identifies key concepts, methods, and findings Includes coverage of multiple disorders from autism to schizophrenia Reviews specific genes associated with disorders Discusses the genetic architecture of these syndromes Explains how recent findings are influencing the understanding of biology Clarifies the promise of these findings for future treatment

This book presents state-of-the-art knowledge, cutting-edge research and integrated analysis methods from the fields of social networks, travel behaviour and urban analysis. It explores the challenges related to the question of how we can synchronize among social networks activities, transport means, intelligent communication/information technologies and the urban form. It offers new horizons for research and will be of interest to students and scholars studying mobilities, transport studies, urban geography, urban planning, the built environment and urban policy.

This volume is motivated by the desire to explain why Neanderthals were replaced by modern humans, in terms of cultural differences between the two (sub-) species. It provides up-to-date coverage on the theory of cultural evolution as is being used by anthropologists, archaeologists, biologists and psychologists to decipher hominin cultural change and diversity during the Palaeolithic. The contributing authors are directly involved in this effort and the material presented includes novel approaches and findings. Chapters explain how learning strategies in combination with social and demographic factors (e.g., population size and mobility patterns) predict cultural evolution in a world without the printing press, television or the Internet. Also addressed is the inverse problem of how learning strategies may be inferred from actual trajectories of cultural change, for example as seen in the North American Palaeolithic. Mathematics and statistics, a sometimes necessary part of theory, are explained in elementary terms where they appear, with details relegated to appendices. Full citations of the relevant literature will help the reader to further pursue any topic of interest.
