Alcohol consumption goes to the very roots of nearly all human societies. Different countries and regions have become associated with different sorts of alcohol, for instance, the “beer culture” of

Over the last three decades, wine

economics has emerged as a growing field within agricultural economics, but also in other fields such as finance, trade, growth, environmental economics and industrial organization. Wine has a few characteristics that differentiate it from other

agricultural commodities, rendering it an interesting topic for economists in general. Fine wine can regularly fetch bottle prices that exceed several thousand dollars. It can be stored a long time and may increase in value with age. Fine wine quality

and prices are extraordinarily sensitive to fluctuations in the weather of the year in which the grapes were grown. And wine is an experience good, i.e., its quality cannot be ascertained before consumption. As a result, consumers often rely on 'expert

opinion' regarding quality and maturation prospects. This handbook takes a broad approach and familiarizes the reader with the main research strands in wine economics. After a general introduction to wine economics by Karl Storchmann, Volume 1

Download File PDF Ib French Hl 2011 Past Paper

focuses on the core areas of wine economics. The first papers shed light on the relevance of the vineyard's natural environment for wine quality and prices. 'Predicting the Quality and Prices of Bordeaux Wine' by Orley Ashenfelter is a classic paper and

may be the first wine economics publication ever. Ashenfelter shows how weather influences the quality and the price of Bordeaux Grands Crus wine. Since the weather condition of the year when the grapes were grown is known, an econometric analysis

may be constructed. It turns out this model outperforms expert opinion, i.e., critical vintage scores. At best, expert opinion reflects public information. The subsequent papers, by Ashenfelter and Storchmann, Gergaud and Ginsburgh, and

Download File PDF Ib French Hl 2011 Past Paper

Cross, Plantinga and Stavins, tackle the terroir question. That is, they examine the relevance of a vineyard's physical characteristics for wine quality and prices, but from various dimensions and with different results. Next, Alston et al. analyze

a question of great concern in the California wine industry: the causes and consequences of the rising alcohol content in California wine. Is climate change the culprit?The next chapter presents three papers that apply hedonic price analyses

to fine wine. Combris, Lecocq and Visser show that Bordeaux wine market prices are essentially determined by the wines' objective characteristics. Costanigro, McCluskey and Mittelhammer differentiate their hedonic analysis for various

storage life, which makes it potentially an investment asset. Studying wine's increasing role as an alternative asset class, Sanning et al., Burton and Jacobsen, Masset and Weisskopf, Masset and Henderson, and Fogarty all examine the rate of

return to holding wine as well as the related risks. Since these papers analyze different wines and different time periods there is no 'one message.' However, all point out that, while wine may diversify an investor's portfolio, wine's returns do not beat

common stock in the long run. The last two chapters examine the role of wine experts. First, Ashenfelter and Quandt revisit the 1976 'Judgment of Paris' and show that aggregating the assessments of several judges should go beyond 'adding points.'

Download File PDF Ib French HI 2011 Past Paper

Depending on the method employed, the results may vary, and some measure of statistical precision is essential for interpreting the reliability of the results. In two different papers, Cicchetti and Quandt respond to the necessity to provide

Download File PDF Ib French HI 2011 Past Paper

statistical tools for the assessment of wine tastings. In a seminal paper, Hodgson reports a remarkable field experiment in which similar wines were placed before judges at a major competition. The results have the shocking implication that how

medals are awarded at a major California wine fair is not far from being random. Ashton analyzes the performance of professional wine judges and finds little support for the idea that experienced wine judges should be regarded as experts.Do

experts scores influence the price of wine? The answer to this question is less obvious than commonly thought since expert opinion oftentimes only repeats public information such as wine quality that results from the weather that produced the wine

grapes. Hadj Ali, Lecocq, and Visser as well as Dubois and Nauges find that high critical scores exert only small effects on wine prices. However, Roberts and Reagans show that a high critical exposure reduces the price-quality dispersion of

wineries. Lecocq and Visser analyze wine prices and find that 'characteristics that are directly revealed to the consumer upon inspection of the bottle and its label explain the major part of price differences.' Expert opinion and sensory variables appear to

Download File PDF Ib French Hl 2011 Past Paper

play only a minor role. In an experimental setting using two Vickrey auctions, Combris, Lange and Issanchou confirm the leading role of public information, i.e., the label remains a key determinant for champagne prices. In a

Download File PDF Ib French HI 2011 Past Paper

provocative and widely discussed study drawing on blind tasting results of some 5,000 wines, Goldstein and collaborators find that most consumers prefer less expensive over expensive wine. Finally, Weil examines the value of expert wine descriptions

and lets several hundred subjects match the wines and their descriptors. His results suggest that the ability to assign a certain description to the matching wine is more or less random. Volume 2 covers the topics reputation, regulation, auctions, and market

women in the wine industry. He finds that (1) women are underrepresented and (2) that the presence of a female CEO increases the likelihood of women in winemaker, viticulturist, and marketing roles in that firm. Gokcekus, Hewstone, and Cakal

Telemedicine networks to support healthcare workers in resource-limited settings (often for humanitarian purposes) have evolved in a largely autonomous way. Communication between the

Download File PDF Ib French HI 2011 Past Paper

networks has been informal and relatively limited in scope. This situation could be improved by developing a comprehensive approach to the collection and dissemination of information. While many telemedicine networks

Download File PDF Ib French HI 2011 Past Paper

remain experimental, some have matured to become routine services which assist health care delivery in challenging environments. For example, there are a few networks which have been in operation for over a decade, and provide store-

Download File PDF Ib French HI 2011 Past Paper

and-forward telemedicine services to doctors in low and middle-income countries. These networks deliver clinically useful services and improved healthcare access. However, like much of telemedicine, the formal evidence

Download File PDF Ib French HI 2011 Past Paper

for their cost-effectiveness remains weak. Topics of current research interest therefore include the cost-effectiveness of telemedicine in resource-limited settings. Other topics of interest concern outcomes data (and methods for gathering it)

Download File PDF Ib French HI 2011 Past Paper

such as patient quality of life following a telemedicine episode, the knowledge-gain of healthcare staff involved in telemedicine, and staff recruitment and retention in rural areas. Finally, there is little published information about the

performance of these telemedicine networks (and methods for measuring it), about how best to manage them, and about how to share resources between them. Following the previous volume, this Research Topic will document

Most of the technological developments relevant to water supply and wastewater date back to more than to five thousand years ago. These developments were driven by the necessity to make efficient use

Download File PDF Ib French HI 2011 Past Paper

of natural resources, to make civilizations more resistant to destructive natural elements, and to improve the standards of life, both at public and private level. Rapid technological progress in the 20th century created a disregard for past

sanitation and wastewater and stormwater technologies that were considered to be far behind the present ones. A great deal of unresolved problems in the developing world related to the wastewater management principles,

Download File PDF Ib French HI 2011 Past Paper

such as the decentralization of the processes, the durability of the water projects, the cost effectiveness, and sustainability issues, such as protection from floods and droughts were intensified to an unprecedented degree. New problems have arisen

Download File PDF Ib French HI 2011 Past Paper

such as the contamination of surface and groundwater. Naturally, intensification of unresolved problems has led to the reconsideration of successful past achievements. This retrospective view, based on archaeological,
