Rituals and performances are a key theme in the study of nations and nationalism. With the aim of stimulating further research in this area, this book explores, debates and evaluates the role of rituals and performances in the emergence, persistence and transformation of nations, nationalisms and national identity. The chapters comprising this book investigate a diverse array of contemporary and historical phenomena relating to the symbolic life of nations, from the Yasukuni Shrine in Japan to the Louvre in France, written by an interdisciplinary cast of world-

renowned and up-and-coming scholars. Each of the contributors has been encouraged to think about how his or her particular approach and methods relates to the others. This has given rise to several recurring debates and themes running through the book over how researchers ought to approach rituals and performances and how they might best be studied. The Cultural Politics of Nationalism and Nation-Building will appeal to students and scholars of ethnicity and nationalism, sociology, political science, anthropology, cultural studies, performance studies, art history and architecture.

national stature. Our combination of award-winning feature writing, investigative reporting, service journalism, and design covers the people, lifestyle, culture, entertainment, fashion, art and architecture, and news that define Southern California. Started in the spring of 1961, Los Angeles magazine has been addressing the needs and interests of our region for 48 years. The magazine continues to be the definitive resource for an affluent population that is intensely interested in a lifestyle that is uniquely Southern Californian.

Information Communication Technology (ICT) Integration to Educational Curricula serves as a standard textbook in graduate and senior level undergraduate classes in colleges and universities to contribute to the existing mass communication and ICT literature. The textbook offers a multi-discipline perspective to students of mass communication and information technology and avails them an opportunity to have a valid research tool with great details to pursue their research and class assignments. It provides

an essential platform for appropriate literature in mass communication, political communication, and ICT details with relevance to its integration in Africa educational curricula. The book can also serve as a supplemental text for courses in mass media effects, politics, and political communications. It includes contributions by scholars and professionals of African extraction with varied research interests on diverse issues relevant to ICT and its significant impact to curricula development and application to Africa as the new African educational system. The chapters cover a wide array of mass communication, diffusion of innovation, and ICT issues of diverse importance that

Recent discussions among scientists and policy-makers have highlighted that knowledge generated by many research and demonstration projects is not reaching policymakers in an efficient way. Conversely, the consideration of research results by the policy making community is not straightforward, and difficulties arise in integrating the latest research developments in legislation. The difficulty is enhanced by the fact that the policy-making community is not defining its role as "client" sufficiently well and the dialogue and communication channels are far from ideal to ensure an efficient flow of information. An increasing number of experts consider

## Access Free Icm Past Papers For 2010

that improvements could be achieved through the development of a "science-policy interface" so that R&D results are synthesised in a way to efficiently feed policy implementation and that short, medium and long term research needs may be identified. This book examines the issue of integrating science into policy, with an emphasis on water system knowledge and related policies. An important feature of the book is the discussion of science-policy interfacing needs, illustrated by examples from authors from different countries in relation to water system management. This publication is timely in that the science-policy interfacing is now identified as a key

## Access Free Icm Past Papers For 2010

challenge worldwide with regard to integrated water resource management, and therefore the book will be of great interest to scientists, water managers and stakeholders. Readers will also benefit from a better understanding of the needs, benefits and drawbacks of an established transfer mechanism of scientific outputs to policies.

The explosive growth of e-commerce and online

environments has made the issue of information search and selection increasingly serious; users are overloaded by options to consider and they may not have the time or knowledge to personally evaluate these options.

Recommender systems have proven to be a valuable way for online users to cope with the information overload and have become one of the most powerful and popular tools in electronic commerce. Correspondingly, various techniques for recommendation generation have been proposed. During the last decade, many of them have also been successfully deployed in commercial environments. Recommender Systems Handbook, an edited volume, is a

multi-disciplinary effort that involves world-wide experts from diverse fields, such as artificial intelligence, human computer interaction, information technology, data mining, statistics, adaptive user interfaces, decision support systems, marketing, and consumer behavior. Theoreticians and practitioners from these fields continually seek techniques for more efficient, cost-effective and accurate recommender systems. This handbook aims to impose a degree of order on this diversity, by presenting a coherent and unified repository of recommender systems' major concepts, theories, methodologies, trends, challenges and applications.

Collaboration has become a hallmark in both intragovernmental and intergovernmental relationships. As collaboration scholarship rapidly emerges, it diverges into several directions, resulting in confusion about what collaboration is and what it can be used to accomplish. This book provides much needed insight into existing ideas and theories of collaboration, advancing a revised theoretical model and accompanying typologies that further our understanding of collaborative processes within the public sector. Organized into three parts, each chapter presents a different theoretical approach to public problems, valuing the collective insights that result from honoring many individual perspectives. Case studies in collaboration, split across three levels of government, offer additional*

Contributions are made by authors from a variety of backgrounds, including an attorney, a career educator, a federal executive, a human resource administrator, a police officer, a self-employed entrepreneur, as well as scholars of public administration and public policy. Drawing upon the individual experiences offered by these perspectives, the book emphasizes the commonalities of collaboration. It is from this common ground, the shared experiences forged among seemingly disparate interactions that advances in collaboration theory arise. Advancing Collaboration Theory offers a unique compilation of collaborative models and typologies that enhance the existing understanding of public sector collaboration.*

This edited volume emphasizes risk and crisis communication principles and practices within the up-to the minute context of new technologies, a new focus on resiliency, and global environmental change. It includes contributions from experts from around the globe whose research, advocacy, teaching, work, or service in the natural or social sciences deals with risk communication and/or management surrounding natural and technological disasters,

with a particular focus on climate change-related phenomena. Resilience and good communication are intimately linked and with climate change precipitating more numerous and onerous weather-related catastrophes, a conversation on resilience is timely and necessary. The goal is robust communities that are able to withstand the shock of disaster. Communicating well under ordinary circumstances is challenging; communicating during a crisis is extraordinarily difficult. This book is dedicated to all those who have directly

or indirectly suffered the effects of climate change and extreme events with the hope that the advance of knowledge, implementation of sound science and appropriate policies and use of effective communication will help in reducing their vulnerability while also improving resilience in the face of often devastating natural and technological disasters.

The nature of interactions between mathematicians and physicists has been thoroughly transformed in recent years. String theory and quantum field theory have

contributed a series of profound ideas that gave rise to entirely new mathematical fields and revitalized older ones. The influence flows in both directions, with mathematical techniques and ideas contributing crucially to major advances in string theory. A large and rapidly growing number of both mathematicians and physicists are working at the string-theoretic interface between the two academic fields. The String-Math conference series aims to bring together leading mathematicians and mathematically minded physicists working in

and explain the changing ideas about the practice of midwifery in China. Using participant observations and interviews, it examines each phase of the development of midwifery in depth. Providing a systematic study of the existing literature and contemporary national health policies, it analyses the factors contributing to the current demise of midwifery in China, such as the absence of national regulation, high standards of education and national midwives' associations. Furthermore, it argues that China's national statistics in the past six decades demonstrate clear evidence that

minimising maternal mortality rates will only happen through wider availability of services, rather than through obstetric technology or facility based care.

Ultimately, therefore this book supports the view that humanity and midwifery will survive to overcome domination by both technology and market forces and that economic growth and medical technology alone will not be sufficient in providing effective healthcare. This book is an indispensable resource for the study of Chinese midwifery, both in theory and in practice. As such it will be useful to students and scholars of Midwifery,
