engineering and the
sciences. Into the mix
of these ideas comes

the opportunity to
visualize concepts
through the use of
computer algebra
systems such as
Maple. The book
emphasizes that this
visualization goes
hand-in-hand with the
understanding of the

mathematics behind
the computer
construction. Students
will not only “ see ”
geodesics on surfaces,
but they will also see
the effect that an
abstract result such as
the Clairaut relation
can have on geodesics.
Furthermore, the
book shows how the
equations of motion of

particles constrained
to surfaces are actually
types of geodesics.

Students will also see
how particles move
under constraints. The
book is rich in results
and exercises that
form a continuous
spectrum, from those
that depend on
calculation to proofs
that are quite abstract.
