A NOW READ THIS PBS NewsHour and New York Times Book Review selection From the New York Times best-selling author of How Children Succeed comes an essential handbook of successful strategies to help kids overcome issues, learn, and thrive in today's chaotic learning environments. In How Children Succeed, Paul Tough introduced us to research showing that personal qualities like perseverance, self-control, and conscientiousness play a critical role in children's success. Now, in Helping Children Succeed, Tough takes on a new set of pressing questions: What does growing up with economic and other stresses do to children's mental and physical development? How does adversity at home affect their success in the classroom, from preschool to high school? And what practical steps can the adults who are responsible for them take to improve their chances for a positive future? Tough once again encourages us to think in a new way about the challenges of childhood. Mining the latest research in psychology and neuroscience, he provides us with insights and strategies for a new approach to childhood adversity, one designed to help many more children succeed. This accessible and engaging work introduces current and future teachers, child care providers, and others interested in early childhood education to the importance for the early years in children's well-being and success. It summarizes their research on the value of high-quality services for young children, families, and society, showing why early education matters both today and into the future. Emphasizing the need to understand and respect young children's strengths and unique characteristics, the authors offer inspiration for working in the field, as well as addressing the realistic challenges of implementing developmentally appropriate care and education.

Your Handbook for Action

Infants, Toddlers and Caregivers is an ideal introduction to care and education in the first three years of life, featuring a respectful approach inspired by field pioneers Magda Gerber and Dr. Emmi Pikler. The text provides practical information based on theoretical and research foundations that students can implement in a variety of infant and toddler settings. At a time in early childhood education when school readiness and technological devices and screens for the very young are hot topics, this text focuses on the value of free play, the development of self-reliance, and the importance of responsive, respectful interactions.

The purpose of this document is to suggest guidelines for the identification and assessment of children who should participate in programs related to the infant-toddler (Part H) and the preschool (Part B, Section 619) components of Public Law 99-457, the Education of the Handicapped Amendments of 1986. The guidelines integrate information from the fields of medicine, health care, social services, psychology, and education and describe practices to advance the field of early intervention and improve services to children and families. The document first describes the requirements of Public Law 99-457 regarding screening and assessment. A theoretical viewpoint about childhood development is presented, and the differences between screening and assessment are outlined. The complex factors involved in defining the population to be served by Public Law 99-457 are noted, and guidelines for screening and assessing young disabled and developmentally vulnerable children are then proposed. A sequenced planning process is outlined and future tasks are listed. Appendices are attached that contain illustrations of several different models, representative lists of screening and assessment instruments and procedures, a glossary, and regulations from Public Law 94-142 and Public Law 99-457 that pertain to screening and assessment. Includes 79 references. (JDD)

Building on extensive feedback from the field as well as vigorous new research on how best to support infant and toddler development and learning, the authors have revised and updated the widely used Infant/Toddler Environment Rating Scale. ITERS-3 is the next-generation assessment tool for use in center-based child care programs for infants and toddlers up to 36 months of age. ITERS-3 focuses on the full range of needs of infants and toddlers and provides a framework for improving program quality. Further, the scale assesses both environmental provisions and teacher-child interactions that affect the broad developmental milestones of infants and toddlers, including: language, cognitive, social-emotional and physical development, as well as concern for health and safety. ITERS-3 is appropriate for state- and district-wide QRIS and continuous quality improvement, program evaluation by directors and supervisors, teacher self-evaluation, monitoring by agency staff, and teacher training programs. The established reliability and validity of the scale make it particularly useful for research and program evaluation. While the approach to assessing quality and the scoring process remain the same for the new ITERS-3, users will find the following improvements informed by extensive use of the ITERS in the field and by the most recent research: Enhanced focus on interactions and the role of the teacher. Six new language and literacy Items. A new Item on beginning math experiences. Expanded age range to include children from birth to 36 months. A new approach to scoring based solely on observation of ongoing classroom activity (3-hour time sample). The elimination of the parents/staff subscale and teacher interviews, freeing up time for observing more actual classroom practice. Improved indicator scaling, providing more precise and useful scores for use in professional development and self-improvement. Reduced emphasis on the number of materials, along with greater emphasis on how materials are used to encourage learning. Suitable for use in inclusive and culturally diverse programs, ITERS-3 subscales evaluate: Space and Furnishings Personal Care Routines Language and Books Activities Interaction Program Structure

Written in a conversational style, yet solidly grounded in child development theory and research, Guidance of Young Children, 9/e focuses on positive and developmentally appropriate child guidance, while encouraging reflection, opportunities for applying knowledge, and the ability to make intentional and wise child guidance decisions. Parenting Matters

There are many ways parents and caregivers can help children thrive in their earliest years of life. Babies in the Rain explains the theories behind the best practices for infant and toddler care as well as preferred methods for doing so. In a personable, humorous voice, Jeff A. Johnson shares his own stories about the amazing ways infants and toddlers learn. He offers valuable information on how to spend quality time with young children by building strong emotional environments, nurturing meaningful relationships, and promoting child-centered, age-appropriate learning.

In recent decades, advances in biomedical research have helped save or lengthen the lives of children around the world. With improved therapies, child and adolescent mortality rates have decreased significantly in the last half century. Despite these advances, pediatricians and others argue that children have not shared equally with adults in biomedical advances. Even though we want children to benefit from the dramatic and accelerating rate of progress in medical care that has been fueled by scientific research, we do not want to place children at risk of being harmed by participating in clinical studies. Ethical Conduct of Clinical Research Involving Children considers the necessities and challenges of this type of research and reviews the ethical and legal standards for conducting it. It also considers problems with the interpretation and application of these standards and conduct, concluding that while children should not be excluded from potentially beneficial clinical studies, some research that is ethically permissible for adults is not acceptable for children, who usually do not have the legal capacity or maturity to make informed decisions about research participation. The book looks at the need for appropriate pediatric expertise at all stages of the design, review, and conduct of a research project to effectively implement policies to protect children. It argues persuasively that a robust system for protecting human research participants in general is a necessary foundation for protecting child research participants in particular.

INFANTS AND TODDLERS: CAREGIVING AND RESPONSIVE CURRICULUM DEVELOPMENT, 9th Edition, guides readers through the acquisition of skills necessary to provide high-quality care for infants and toddlers in any educational setting. This edition's new subtitle better reflects the book's goal of providing appropriate caregiving and educational techniques, as well as curriculum ideas, for infants and toddlers from birth to age three. Overviews of key child care philosophies as they relate to the child, the caregiver, and parent involvement are presented along with case studies and lesson plans that help students translate theory into practice. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version. Ethological attachment theory is a landmark of 20th century social and behavioral sciences theory and research. This new paradigm for understanding primary relationships across the lifespan evolved from John Bowlby's critique of psychoanalytic drive theory and his own clinical observations, supplemented by his knowledge of fields as diverse as primate ethology, control systems theory, and cognitive psychology. By the time he had written the first volume of his classic Attachment and Loss trilogy, Mary D. Salter Ainsworth's naturalistic observations in Uganda and Baltimore, and her theoretical and descriptive insights about maternal care and the secure base phenomenon had become integral to attachment theory. Patterns of Attachment reports the methods and key results of Ainsworth's landmark Baltimore Longitudinal Study. Following upon her naturalistic home observations in Uganda, the Baltimore project yielded a wealth of enduring, benchmark results on the nature of the child's tie to its primary caregiver and the importance of early experience. It also addressed a wide range of conceptual and methodological issues common to many developmental and longitudinal projects, especially issues of age appropriate assessment, quantifying behavior, and comprehending individual differences. In addition, Ainsworth and her students broke new ground, clarifying and defining new concepts, demonstrating the value of the ethological methods and insights about behavior. Today, as we enter the fourth generation of attachment study, we have a rich and growing catalogue of behavioral and narrative approaches to measuring attachment from infancy to adulthood. Each of them has roots in the Strange Situation and the secure base concept presented in Patterns of Attachment. It inclusion in the Psychology Press Classic Editions series reflects Patterns of Attachment's continuing significance and insures its availability to new generations of students, researchers, and clinicians.

Clearly babies come into the world remarkably receptive to its wonders. Their alertness to sights, sounds, and even abstract concepts makes them inquisitive explorers--and learners--every waking minute. Well before formal schooling begins, children's early experiences lay the foundations for their later social behavior, emotional regulation, and literacy. Yet, for a variety of reasons, far too little attention is given to the quality of these crucial years. Outmoded theories, outdated facts, and undersized budgets all play a part in the uneven quality of early childhood programs throughout our country. What will it take to provide better early education and care for our children between the ages of two and five? Eager to Learn explores this crucial question, synthesizing the newest research findings on how young children learn and the impact of early learning. Key discoveries in how young children learn are reviewed in language accessible to parents as well as educators: findings about the interplay of biology and environment, variations in learning among individuals and children from different social and economic groups, and the importance of health, safety, nutrition and interpersonal warmth to early learning. Perhaps most significant, the book documents how very early in life learning really begins. Valuable conclusions and recommendations are presented in the areas of the teacher-child relationship, the organization and content of curriculum, meeting the needs of those children most at risk of school failure, teacher preparation, assessment of teaching and learning, and more. The book discusses: Evidence for competing theories, models, and approaches in the field and a hard look at some day-to-day practices and activities generally used in preschool. The role of the teacher, the importance of peer interactions, and other relationships in the child's life. Learning needs of minority children, children with disabilities, and other special groups. Approaches to assessing young children's learning for the purposes of policy decisions, diagnosis of educational difficulties, and instructional planning. Preparation and continuing development of teachers. Eager to Learn presents a comprehensive, coherent picture of early childhood learning, along with a clear path toward improving this important stage of life for all children.

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Decades of research have demonstrated that the parent-child dyad and the environment of the familyâ€”which includes all primary caregiversâ€”are at the foundation of children's well- being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.
