Part of the Illustrated Series, this text offers a quick, visual, step-by-step approach for learning how to integrate Microsoft Office 2000 applications. This textbook provides future data analysts with the tools, methods, and skills needed to answer data-focused, real-life questions; to carry out data analysis; and to visualize and interpret results to support better decisions in business, economics, and public policy. Data wrangling and exploration, regression analysis, machine learning, and causal analysis are comprehensively covered, as well as when, why, and how the methods work, and how they relate to each other. As the most effective way to communicate data analysis, running case studies play a central role in this textbook. Each case starts with an industry-relevant question and answers it by using real-world data and applying the tools and methods covered in the textbook. Learning is then consolidated by 360 practice questions and 120 data exercises. Extensive online resources, including raw and cleaned data and codes for all analysis in Stata, R, and Python, can be found at www.gabors-data-analysis.com.

"The book's use of real-world case study vignettes really does go to the heart of the subject matter. This stuff is real, it has real applicability to real problems, and, as with most things in life, it shows how it all comes down to real money in the final analysis. This book shows you what your peers are doing to drive costs out of integration projects and to build new applications without re-inventing the entire wheel—just a few new spokes and off you go. This is a good book. Read it." —Peter Rhys Jenkins, Complex Systems Architect, Candle Corporation

"When you get two long-term, acknowledged experts on integration and interoperability together to lay out the current state of the IT universe you expect an immediate return on investment—and this book delivers. It's common knowledge that 90% of total software lifecycle cost is in maintenance and integration, and that needs to drive IT decision-making. With comprehensive coverage of the integration technology landscape, and clear case studies presented at every turn, this book belongs on every IT manager's, every system architect's, and every software developer's bookshelf." —Richard Mark Soley, chairman and CEO, Object Management Group

The narrative, examples, and templates establish a common reference point between the business and the technology organizations. A must-read for senior business leaders challenged with the complexities of business integration, as well as Senior IT Leaders challenged with shrinking budgets and lower tolerances for failures." —Chuck Papageorgiou, managing partner, Ideasphere

"Integration has, and will continue to be, one of the success indicators of any enterprise project. Failing to understand the nuances of integration is a critical mistake managers cannot afford to make." —Marcia Robinson, author of Services Blueprint: Roadmap for Execution

"A much-needed book; it ties together the business and technology aspects of information system implementation, emphasizing best practices for really getting things done. I believe that both the technical and business communities will benefit from the

in-depth material provided in this book.” —Dr. Barry Horowitz, professor of systems and information engineering, University of Virginia (former CEO, Mitre Corporation) Integration of applications, information, and business process has become today’s #1 IT investment priority. Renowned enterprise integration experts Beth Gold-Bernstein and William Ruh present best practices and case studies that bring their methodology to life. In addition to providing detailed information on the 500+ accredited programs across the nation, this guide lists the accredited programs that meet especially high standards set by leaders in each teaching field. The guide's resource materials make it easy for the student, guidance counselor, and career advisor to gain up-to-date information about becoming a teacher today.
