**Introductory Accounting** adopts a measurement approach to teaching graduate students the basics of accounting. Integrating both financial and managerial principles from the U.S. and around the globe, it links accounting to other areas of business (such as finance, operations, and management). Providing students with the context to understand how and why accounting is a valuable part of business, readers will gain an understanding of accounting's role in financial analysis and managerial decision-making. Tinkelman discusses accounting as an imperfect measurement system, offering guidance on how quantitative data can benefit analysts and managers when used with an understanding of its limitations. The book is strongly grounded in research, and also draws on plenty of examples and cases to bring these issues to life. The conversational style of Introductory Accounting will appeal to MBA students, while key terms and illustrative problems make assignments easy for instructors. Additional materials for students and instructors are available on the book's companion website.

Introduction to Financial Accounting

Cima Official Learning System Test of Professional Competence in Management Accounting

A Measurement Approach for Managers

The theory and practice of management accounting should be seen within the context of varieties of global capitalism, to appreciate its role as a 'calculative technology of capitalism' which is practiced on factory floors, corporate boards, computer networks, spreadsheets, and so forth. This new textbook is the first to introduce the field from a rounded social science perspective. Strategizing Management Accounting offers a theoretical discussion on management accounting's strategic orientation by accommodating two interrelated lines of analyses, from historical and contemporary perspectives. The book illustrates how 'new management accounting' has evolved into the form in which it exists today in its neoliberal context and how those new management accounting practices have become manifestos for the managers, as calculative technologies of decision making, performance management, control, corporate governance, as well as global governance, and development within various forms of organizations across the globe. Each chapter draws on Foucauldian analysis of biopolitics explaining how neoliberal market logic informs a set of strategies and mechanisms through which various social entities and discourses are made governable by considering them as biopolitical entities of global governance. Written by two recognized accounting experts, this book is vital reading for all students of management accounting and will also be a useful supplementary resource for those wanting to understand and research accounting's vital role in contemporary society.

The ACCA F3 Study Text is split into six parts in line with the syllabus structure. The examiner has commented that the Study Text is well structured and focused to meet the requirements of the F3 student. There is a whole chapter devoted to the subject of ethical considerations, as ethics and social responsibility are integral to the new ACCA syllabus.
