The book gives equal prominence to ICD and DSM classification - often with direct comparisons - giving the book a universal appeal. Agnes ' s Jacket tells their story, focusing especially on the Hearing Voices Network (HVN), an international collaboration of professionals, people with lived experience, and their families and friends who have been working to develop an alternative approach to coping with voices, visions, and other extreme states that is empowering and useful and does not start

Andreasen gives us an engaging and readable description of how it all works -- from billions of neurons, to the tiny thalamus, to the moral monitor in our prefrontal cortex. She shows the progress made in mapping the human genome, whose 30,000 to 40,000 genes are almost all active in the brain. Four major disorders are
