Arguably the strongest addition to numerical finance of the
past decade, Algorithmic Adjoint Differentiation (AAD) is
the technology implemented in modern financial software to
produce thousands of accurate risk sensitivities, within
seconds, on light hardware. AAD recently became a
centerpiece of modern financial systems and a key skill for
all quantitative analysts, developers, risk professionals or
anyone involved with derivatives. It is increasingly taught in
Masters and PhD programs in finance. Danske Bank's wide
scale implementation of AAD in its production and
regulatory systems won the In-House System of the Year 2015
Risk award. The Modern Computational Finance books,
written by three of the very people who designed Danske*

Bank's systems, offer a unique insight into the modern implementation of financial models. The volumes combine financial modelling, mathematics and programming to resolve real life financial problems and produce effective derivatives software. This volume is a complete, self-contained learning reference for AAD, and its application in finance. AAD is explained in deep detail throughout chapters that gently lead readers from the theoretical foundations to the most delicate areas of an efficient implementation, such as memory management, parallel implementation and acceleration with expression templates. The book comes with professional source code in C++, including an efficient, up to date implementation of AAD and a generic parallel simulation library. Modern C++, high performance parallel programming and interfacing C++ with Excel are also covered. The book builds the code step-by-step, while the code illustrates the concepts and notions developed in the book.

An introduction to a broad range of topics in deep learning, covering mathematical and conceptual background, deep learning techniques used in industry, and research perspectives. "Written by three experts in the field, Deep Learning is the only comprehensive book on the subject." —Elon Musk, cochair of OpenAI; cofounder and CEO of Tesla and SpaceX Deep learning is a form of machine learning that enables computers to learn from experience and understand the world in terms of a hierarchy of concepts. Because the computer gathers knowledge from experience, there is no need for a human computer operator to formally specify all the knowledge that the computer needs. The hierarchy of concepts allows the computer to learn complicated concepts by building

them out of simpler ones; a graph of these hierarchies would be many layers deep. This book introduces a broad range of topics in deep learning. The text offers mathematical and conceptual background, covering relevant concepts in linear algebra, probability theory and information theory, numerical computation, and machine learning. It describes deep learning techniques used by practitioners in industry, including deep feedforward networks, regularization, optimization algorithms, convolutional networks, sequence modeling, and practical methodology; and it surveys such applications as natural language processing, speech recognition, computer vision, online recommendation systems, bioinformatics, and videogames. Finally, the book offers research perspectives, covering such theoretical topics as linear factor models, autoencoders, representation learning, structured probabilistic models, Monte Carlo methods, the partition function, approximate inference, and deep generative models. Deep Learning can be used by undergraduate or graduate students planning careers in either industry or research, and by software engineers who want to begin using deep learning in their products or platforms. A website offers supplementary material for both readers and instructors.

*An account by "the finest travel writer of the last
century" of his journey through 1930s Spain in
search of an ancestral tomb (The New Yorker). In the
1930s, Norman Lewis and his brother-in-law, Eugene
Corvaja, journeyed to Spain to visit the family's
ancestral tomb in Seville. Seventy years later, with
evocative and engrossing prose, Lewis recounts the
trip, taken on the brink of the Spanish Civil War.
Witnesses to the changing political climate and
culture, Lewis and Corvaja travel through the
countryside from Madrid to Seville by bus, car, train,
and on foot, encountering many surprises along the
way. Dodging the skirmishes that will later erupt into
war, they immerse themselves in the local culture and
landscape, marveling at the many enchantments of
Spain during this pivotal time in its history.

**New Yorker and author Verona Scott is battling heartbreak,
both personally and professionally. Coming off a disastrous split
with her ex, she's struggling for inspiration to write her next
book. And she's lost without her favorite Aunt Theoni's wisdom
and guidance. Hoping for a fresh start and to avoid the holiday
completely, she's planned a Valentine's detox: a luxurious trip
alone to the historic Courtington Castle hotel, near the adorably
quaint town of Camelot Creek, tucked into a picturesque valley
in the Adirondacks. But escaping the heart-shaped balloons and
red roses isn't as easy as she thought. This won't be the restful
retreat she'd imagined. Instead, she's just walked into one of the
biggest matchmaking events of the year. Not to mention, the
incredibly attractive single dad and dating coach Troy Turner
is heading the whole thing up, and he's on a mission to include
Verona in the festivities. Troy is in the midst of a professional
crisis of his own. After a bit of unfounded bad press, the very
last thing he needs is a guest to cast doubt in the minds of his
attendees. Will Troy change Verona's mind about the most
romantic day of the year? Just when sparks begin to fly, an
unexpected visitor checks into the castle, stirring up the past.
No matter what, for Verona, Valentine's Day is the day where
everything changes. A heartwarming, sweet romance that will
whisk you away to a magical winter wonderland, and have you
reaching for the hot cocoa and box of chocolates long after the
holidays.**

**Cover Design By: Rebecca Gibson Jones It is estimated that up
to sixty-five percent of children entering grade school this year
will end up working in careers that have yet to be created. This
is a result, in part, of the rapid advances in technology that have
occurred since Apple introduced the iPhone just ten years ago.
This technology is not only impacting the way that we learn or
the jobs that we will hold in the future, but it is literally
changing the way that we think. As modern technologies are
introduced during formative periods of brain development, they**

are having an impact on traditionally linear patterns of thought. Today's youth no longer process information in the same linear fashion as past generations. This is creating confusion in educational settings that are specifically designed to meet the needs of linear thinkers. Administrators, educators, and parents must learn to better understand these changes in order to create models that will be viable for 21st century learners. We must work together to create systems that will both support and encourage children who literally think differently than those who teach them. The Rise of the Human Digital Brain: How Multidirectional Thinking is Changing the Way We Learn contains information about the history of education, the changes in the systems of education over the years, and the impact of technology on learning for 21st century students. It also contains the results of a unique study regarding the impact of iPad instruction on literacy attainment for struggling readers. The hope is that the information contained in this book will cause administrators, educators, parents, and developers of new technologies to take a moment to step back and envision a new model that will revolutionize education across the world. Praise for The Rise of the Human Digital Brain: "Beatriz Pacheco's experience as both a researcher and a practitioner in the field of education lends an authenticity to her writing that is both refreshing and enlightening. She has conducted one of the most comprehensive studies to date concerning the use of the iPad for direct instruction, and the results of her study have the potential to influence the teaching of literacy skills on the national level. I highly recommend this book." ~ Michael Gurian, New York Times bestselling author of The Wonder of Boys and The Minds of Girls "For much of human history adults have looked upon the youth of their era as flawed creatures who fail to measure up to nostalgic standards. Dr. Beatriz Pacheco's Rise of the Human Digital Brain guides us to recognize and to understand the elements that make rising

generations of young people different from their predecessors. The digital brain prefers collaborative engagement over traditional hierarchy and linear thinking. Anyone with a smart phone has command of massive amounts of data and information, and coming generations will be more creative and more critical. Educational systems must change to meet the needs of a changing time. Any educator would benefit from this book." ~ Tori Murden McClure, President of Spalding University Author of A Pearl in The Storm "There is no doubt that the accelerated development of digital technology in our day has profoundly transformed the ways in which human beings interact and how we interpret reality. We live in a new paradigm that demands critical assessment of how we educate the new generations, especially in an era of multidimensional thinking. Beatriz Pacheco's well-researched work insightfully names key questions, poses challenges, and offers ways forward. This book promises to be a key tool in defining the what and the how of education during the rest of the 21st century." ~ Hosffman Ospino Associate Professor of Theology and Education Boston College
