Labeled either as the "next industrial revolution" or as just " hype," nanoscience and nanotechnologies are controversial, touted by some as the likely engines of spectacular transformation of human societies and even human bodies, and by others as conceptually flawed. These challenges make an encyclopedia of nanoscience and society an absolute necessity. Providing a guide to what these understandings and challenges are about, the Encyclopedia of Nanoscience and Society offers accessible descriptions of some of the key technical achievements of nanoscience along with its history and prospects. Rather than a technical primer, this encyclopedia instead focuses on the efforts of governments around the world to fund nanoscience research and to tap its potential for economic development as well as to assess how best to regulate a new technology for the environmental, occupational, and consumer health and safety issues related to the field. Contributions examine and analyze the cultural significance of nanoscience and nanotechnologies and describe some of the organizations, and their products, that promise to make nanotechnologies a critical part of the global economy. Written by noted scholars and practitioners from around the globe, these two volumes offer nearly 500 entries describing the societal aspects of nanoscience and nanotechnology. Key Themes - Art, Design, and Materials - Bionanotechnology Centers - Context - Economics and Business - Engagement and the Public - Environment and Risk - Ethics and Values - Geographies and Distribution - History and Philosophy - Integration and Interdisciplinarity - Nanotechnology Companies - Nanotechnology Organizations

The Wales Office and the Welsh Assembly Government must ensure UK digital inclusion initiatives meet Welsh needs and build on existing good work to deliver on Welsh digital ambitions, says the Welsh Affairs Committee in a report published today. This report "Digital Inclusion in Wales", examines the use of digital technologies in Wales, highlights the urgent need for the eradication of broadband 'hotspots' - areas with limited or no access to high speed internet connections - and says this issue must continue to receive priority attention. There should be more support to help a wider range of people use technology effectively. Employers told the Committee they need staff with better IT skills and more training opportunities. The Committee recommends the Welsh Assembly Government explicitly includes this issue in its digital inclusion strategy. The digital inclusion agenda is a complex mix of reserved and devolved matters. This brings a risk that key issues can be overlooked, for example no account has been taken of Welsh language speakers' needs in the Government's Digital Inclusion Action Plan. The Secretary of State for Wales must ensure that bodies in Wales across all sectors are fully engaged with initiatives and that the next stage of Digital Britain adequately reflects Welsh needs. Higher education institutions also have a vital role to play and should be involved in any new research opportunities. The Welsh Assembly already has successful digital inclusion projects in place and it should continue to be a leader in this area. The Committee also recommends the creation of a one-stop shop providing advice on the risks for young people using technology, and commends the Assembly's work tackling internet related crimes which it says should be promoted as part of the economic development strategy in Wales.
