Globalization has altered in significant ways the tools available to regulate international commerce. One result is the emergence of ethics codes, codes of responsible conduct, and best practice codes designed to win adherence to internationally acceptable norms of conduct on the part of corporations and other organizations interacting in the global market place. This volume looks at these developments with particular focus on five topic areas: respect for human rights, treatment of labor, bribery and corruption, environmental protection, and international finance and the control of money laundering. What is significant about these developments is the emerging emphasis on self-regulation as the primary method for raising standards of corporate conduct. The contributors examine the reasons for the emergence of ethical codes and the phenomenon of self-regulation within the context of globalization and look at the role of national governments, international government institutions and other international organizations in shaping and enforcing them. They also study the implications of these developments for corporate governance and the changing roles of national and international institutions in the regulation of international commerce.

Integrated management systems (IMS) are an innovative way of handling the plethora of management functions and procedures that are applied throughout major construction projects. Contracting companies use management systems to shape and define the corporate arrangement of their business activities, translating these into operational procedures for application to the construction projects they undertake. The management of quality, environment, and safety are at the forefront of systems evolution where the integration of these traditionally independent and dedicated standards-based and process-orientated systems can provide the potential to deliver greater organisational efficiency and effectiveness. This is the first textbook to cover each of the international standards for quality, safety and environment (ISO9000, ISO14001 and ISO18001) and to discuss integrating them. This book provides a detailed yet accessible text to support the study of quality, environment, and safety management systems on professionally accredited undergraduate courses throughout the built environment and for advanced postgraduate courses in construction, project, and engineering management. It is also an indispensable reference for construction professionals working for principal contractors, subcontractors and construction industry supply chain organisations.
