Issues And Ethics In The Helping Professions

Ethics in the field of archaeological research, particularly arising in response to the recent trend of contract archaeology, becomes increasingly more complicated as a result of changing human relations surrounding historical evidence. The past is in fact no "dead and buried", and ethical questions about this living record demand an ongoing discussion within the complex social and cultural domains that contend to interpret this record. Authored largely by members of the Society for American Archaeology Ethics Committee, this volume of original articles tackles issues such as the origin of archaeological ethics, responsibilities to the archaeological record (including discussion of documented and undocumented excavation) and responsibilities to diverse publics and between those in the field. This work should fuel a necessary debate among professionals and students of archaeology alike. Recent evidence readily confirms that ethical conduct in human interaction has declined in the context of business, but also in virtually every phase of life. An alarming number of government leaders at all levels have demonstrated by their conduct that their primary goal is the pursuit of self-interest for themselves, their party, and their constituents - regardless of whether the choices they make are in the long-term best interests of those whom they are obligated to serve.Academic institutions and their leaders similarly seem to be either tied to past assumptions and traditions that seem, or blatantly out of touch with the needs of their students and the communities that they serve. Increasingly, college and university academic programs are being taught by part-time and temporary faculty who are paid less than their elementary and high school counterparts who lack their educational preparation, level of knowledge, or responsibility in preparing students for their chosen careers. Non-governmental organizations also struggle to earn the respect of the public, and their trustworthiness has been called into question as chief executive officers and staff receive high salaries, but lack accountability for achieving results or acting with integrity. Those who work in the media are as a group no longer trusted to provide an objective and unbiased assessment of the news. Even religious institutions are under attack and their leaders are being asked to be accountable to the standards which their doctrines advocate.Implicit in ethical conduct is the responsibility to identify the far goals of human achievement - rather than short-term interests that undermine long-term value creation and outcomes that best serve society. Abraham Maslow has wisely noted that the pursuit of efficiency must be evaluated in terms of the specific goals intended to be achieved, but the ramifications of individual and collective actions often seem to be out of focus, misdirected, and short-sighted.The purpose of this book is to identify key ethics-related issues facing individuals and organizations in the 21st century, and to offer recommendations and encouragement to those who choose to raise the bar for their standards of conduct. This volume combines established thinking about ethics and morality with new insights and ethical perspectives that have never before been addressed by traditional business ethics.The authors are comfortable in challenging the status quo and failures of so many leaders and organizations who have been unable to earn the trust of the general public. In criticizing the failures of institutions and their leaders,

this book is also a plea to those who lead to rethink the standards and criteria which they have adopted about duties that they owe to others.Many of the insights contained within this book invite readers to begin from within themselves by examining their identities and their assumptions about their ethical beliefs. The evidence about personal ethical standards suggest that individuals rarely make conscious decisions regarding their own actions, and fall into patterns that they later acknowledge to be questionable and less than ideal. This book challenges the way that leaders make decisions about moral conduct and asks those who read this book to reassess the impacts of the choices that they make.Finally, this volume encourages readers to discover the best version of themselves. Only when people strive to achieve their highest potential are those individuals likely to optimally benefit others and create a better world. Ultimately, ethics is about each person"s responsibility to constantly improve and to help others along the way.We trust that this book will challenge the thinking of its readers, that it will become the source of dialogue and even possible disagreement about duties and obligations. Our intention is that this book will ultimately inspire individuals to think more clearly about the way that they interact with others and how they can best fulfill their highest purpose in life.

New and experienced psychotherapists alike can find themselves overwhelmed by an ethical quandary where there doesn't seem to be an easy solution. This book presents positive ethics as a means to overcome such ethical challenges. The positive approach focuses on not just avoiding negative consequences, but reaching the best possible outcomes for both the psychotherapist and the client. The authors outline a clear decision-making process that is based on three practical strategies: the ethics acculturation model to help therapists incorporate personal ethics into their professional roles, the quality enhancement model for dealing with high-risk patients who are potentially harmful, and ethical choice-making strategies to make the most ethical decision in a situation where two ethical principles conflict. Throughout the decision-making process, psychotherapists are encouraged to follow four basic guidelines: Focus on overarching ethical principles Consider intuitive, emotional, and other nonrational factors Accept that some problems have elusive solutions Solicit input from colleagues and consultation groups Numerous vignettes illustrate how to apply positive ethics to many different ethical challenges that psychotherapists will likely encounter in practice.

Social Justice in Practice

Today's practitioners and researchers are looking, now more than ever, at the ethical

issues that are raised through the practice of social work and social services. As such, it is crucial that they are up-to-date on the latest data on how to address, manage, and overcome ethical issues in their practice. Ethical Issues in Social Work Practice is a pivotal reference source for the latest research on the role of moral values within social work and the ethical dilemmas that arise in the profession. Highlighting extensive coverage among a variety of applicable perspectives and themes, such as governing principles of social work practice, ethical analysis of social work cases, and individual and social responsibility in social services, this book is ideally designed for professionals and researchers working in the field of social work and social services as well as academics and upper-level students seeking cutting-edge research on ethics in the practice of social work.

In 1959 at a fashionable New England college I introduced a course with what I believed to be an engaging title: "Problems in Christian Ethics." It quickly became very popular, probably because the students thought it might provide a last-gasp answer to the enormous problems raised by the changing world of the '50's and '60's. For both professor and students, the course provided a wonderful opportunity to work out one's point of view on ethical issues. But the major pedagogical stumbling block came in attempting to assign appropriate readings for the juicy subject matter. I either assigned the students a dozen different books to cover the course material, or I prohibited them from reading anything, insisting that the course's substantive content would come from the lectures. Now, after all these years, the problem has been solved. Living Issues in Ethics, a new book by Richard T. Nolan and Frank G. Kirkpatrick, fulfills admirably the need for a one-volume text discussing the basic problems in ethics and dealing with them in both a theoretical and a practical way. It is a solid book, totally contemporary and aware of the latest developments in Christian ethical thinking. In a lucid and engaging way, the authors present the following topics: "The Search for a Moral Philosophy," "Personal Identity and Fulfillment," "Health and Sexuality" and "Social Ethics." They engage the reader in subject matter ranging from "The Ingredients of a Moral Philosophy" to an insightful rendering of the history of that philosophy, as well as problems of femininity, varieties

of love, marriage and the family, medical ethics, moral sexual conduct, obligations of the political order, the socialist alternative, the demand for expression versus the right to privacy, the dilemmas of dissent, sexual justice, energy and ecology, "life-boat" ethics, "just-war" theory, and many, many others. Each chapter contains a review and a section on suggested readings. The book is so good that I plan to use it in next year's "Problems in Christian Ethics." William A. Johnson Professor at Brandeis University, Mass.

The 14 chapters in Ethics at the End of Life: New Issues and Arguments, all published here for the first time, focus on

recent thinking in this important area, helping initiate issues and lines of argument that have not been explored previously. At the same time, a reader can use this volume to become oriented to the established questions and positions in end of life ethics, both because new questions are set in their context, and because most of the chapters—written by a team of experts—survey the field as well as add to it. Each chapter includes initial summaries, final conclusions, and a Related Topics section. TABLE OF CONTENTS John K. Davis, "Introduction" Geoffrey Scarre, "Is it possible to be better off dead?" This book brings together a wide range of topics in leadership ethics and business ethics. It approaches these topics from the perspective of the humanities as well as the social sciences. About half of the book is on leadership and the other half on topics in business ethics. Besides these general areas of research, the book explores how to teach and study ethics in both business ethics and leadership studies. Specifically, it examines issues ranging from the nature of ethical leadership, to studies of authenticity, virtue, and the public and private morality of leaders. In business ethics, the subjects covered span from moral imagination, to casuistry, meaningful work, and workplace ethics. The book includes a section on the importance of liberal arts for studying and teaching ethics in business and professional schools. It concludes with a reflection on the ethical challenges of leaders and followers in a world where some leaders have inverted moral values.

How do we know right from wrong, good from bad, help from hindrance, and how can we judge the behaviour of others? Ethics are the rules and guidelines that we use to make such judgements. Often there are no clear answers, which make this subject both interesting and potentially frustrating. In this book, the authors offer readers the opportunity to develop and express their own opinions in relation to ethics in psychology. There are many psychological studies that appear to have been harmful or cruel to the people or animals that took part in them. For example, memory researchers carried out studies on a man who had no memory for over forty years, but because he had no memory he was never able to agree to the studies. Is this a reasonable thing to do to someone? Comparative psychologist Harry Harlow found that he could

create severe and lasting distress in monkeys by keeping them in social isolation. Is this a reasonable thing to do even if we find out useful things about human distress? If you were able to use psychological techniques to break someone down so that they revealed information that was useful to your government, would you do it? If so, why? If not, why not? These ethical issues are not easy to resolve and the debates continue as we encounter new dilemmas. This book uses examples from psychological research to look at: key ethical issues ethical guidelines of psychologists socially sensitive research ethics in applied psychology the use of animals in research This book is essential reading for undergraduate and pre-undergraduate students of psychology and related subjects such as philosophy and social policy.

This book explores the impact of technology on ethical issues. A series of real-world scenarios are drawn from both business- and technology-oriented contexts.

Current Issues in Business Ethics analyzes the questions which underlie business activities, arguing that the prime object for a legitimate business must be sustainability. It also looks at the issues between individuals and business and asks whether businesses can support their employees as an alternative to family and church. Finally it assesses the impact of most recent trends in business looking at: * the activities of multinational companies * the changing gender balance * privatization * the loss of power of the trade unions.

The Power of Ethics
Following the boom in population databases in recent years there has been sustained and intense international debate about political processes and legal and ethical issues surrounding the protection and use of genetic data. As a result, several national and international organizations and committees have published widely differing guidelines and statements concerning genetic databases and biobanks. Ethical Issues of Human Genetic Databases compares the new area of biobanking with the tradition of ethically accepted classical research and highlights the distinctive features of existing databases and guidelines. The volume identifies areas of consensus and controversy while investigating the challenges posed to classical health research ethics by the existence of genetic databases, analyzing the reasons for such varying guidelines. The book will be essential to academics, biobankers, policy-makers and researchers in the field of medical ethics.
faces the urgent problem of determining what political and social conditions must be preserved in order to ensure a continu. ing thriving economy. "2 And the ethicist, we may add, can draw on all of those problems and quite a few more characteristic of situations when traditional communities struggle with the impact of sudden and unprecedented wealth as well as with a technological transformation of their society of singular proportions. Hong Kong is truly a society in transition, a society whose time is running short and which therefore cannot afford to wait long before it has to make decisive choices, choices also in ethics. The time factor which is so infamous in various ethical dilemmas applies here to the society as a whole; it may also account for some of its not just morally significant shortcomings. II. Ethics in a Cross-cultural Perspective The authors of this volume are scholars

and researchers based in Hong 3 Kong who have been living and working in the territory for many years. They are not only representative of the increased research interest in ethical issues across the academic spectrum of Hong Kong universities, but also of the inter disciplinary approach which has become the hallmark of work in applied eth ics. As is well documented, ethics research, at long last, has left behind its disciplinary confines and, even more so, the philosophical ivory tower and begun to permeate the full scope of the academic and scientific agenda.

The first suggestions and exchange of ideas for this Workshop began about two years ago when, at the invitation of Professor E Bennett, Director of Health and Safety of the Commission of the European Communities and Professor W W Holland of the Panel of Social Medicine and Epidemiology of the EEC, I asked the Panel to sponsor a project for the study of Ethical Issues in Preventive Medicine. The Panel gave its approval and support and asked Dr L Karhausen, Dr R Blaney, and me to undertake the planning. Since then we have had several meetings in Brussels and have added Professor Heleen Terborgh-Dupuis and Mrs Susie Stewart to our small planning team. The Planning Committee invited many experts to collaborate with us on the project and, as can be seen from the list of participants, they represent many scientific disciplines and many countries. About a year ago we also asked for the help and sponsorship of the NATO Science Council which was generously given. The culmination of our efforts was the Workshop held in Athens in January 1985, the proceedings of which are contained in the present book. The members of the Planning Committee and the participants at the Workshop would like to express thanks to Mr H Durand, Secretary General for NATO Scientific Affairs and Dr M di Lullo, Programme Director of N A TO Scientific Affairs and to Professor Bennett and Professor Holland for all the moral and financial support they have given to this project.

When (if ever) may a professional deceive a client for the client's own good? Under what conditions (if any) is whistle-blowing morally required? These are just some of the questions that scholars as diverse as Michael D. Bayles, Thomas Nagel, Sissela Bok, Jessica Mitford, and Peter A. French confront in this stimulating anthology. Organized around philosophical issues such as the moral foundations of professional ethics, models of the professional-client relationship, deception, informed consent, privacy and confidentiality, professional dissent, and professional virtue, the volume illuminates the complex ethical issues that arise in journalism, law, health care, counseling, education, engineering, business, politics, and social science research. A variety of pedagogic aids including clear introductions to and study questions for each set of readings, concrete cases designed to focus discussion, and an appendix on preparing cases and position papers, make the text invaluable for both students and teachers of professional ethics.

In recent years ever-increasing concerns about ethical dimensions of fieldwork practice have forced anthropologists and

other social scientists to radically reconsider the nature, process, and outcomes of fieldwork: what should we be doing, how, for whom, and to what end? In this volume, practitioners from across anthropological disciplines-social and biological anthropology and primatology-come together to question and compare the ethical regulation of fieldwork, what is common to their practices, and what is distinctive to each discipline. Contributors probe a rich variety of contemporary questions: the new, unique problems raised by conducting fieldwork online and via email; the potential dangers of primatological fieldwork for locals, primates, the environment, and the fieldworkers themselves; the problems of studying the military; and the role of ethical clearance for anthropologists involved in international health programs. The distinctive aim of this book is to develop of a transdisciplinary anthropology at the methodological, not theoretical, level.

This book addresses the pressing issues involved with the ethical conduct of research in one developing world region – the Arab Region. Clinical research has soared in the developing world -as pharmaceutical companies continue their search for regions with large, treatment naive populations - including the Arab region, and has profound implications for the health and the economies for the area. The ethical issues involved with the conduct of such research, however, have so far not been adequately addressed. This volume presents the issues regarding research ethics and research governance that have relevance for health authorities, regulators, industry, and academia. As a multi-authored volume it includes both international and local experts on ethical issues in research, representing all stakeholders, thus presenting a balanced view on this timely topic.

The essential guide for ethical decision-making in the 21st century. It's not your imagination: we're living in a time of moral decline. Publicly, we're bombarded with reports of government leaders acting against the welfare of their constituents; companies prioritizing profits over health, safety, and our best interests; and technology posing risks to society with few or no repercussions for those responsible. Personally, we may be conflicted about how much privacy to afford our children on the internet; how to make informed choices about our purchases and the companies we buy from; or how to handle misconduct we witness at home and at work. How do we find a way forward? Today's ethical challenges are increasingly gray, often without a clear right or wrong solution, causing us to teeter on the edge of effective decision-making. With concentrated power structures, rapid advances in technology, and insufficient regulation to protect citizens and consumers, ethics are harder to understand than ever. But in The Power of Ethics, Susan Liautaud shows how ethics can be used to create a sea change of positive decisions that can ripple outward to our families, communities, workplaces, and the wider world—offering unprecedented opportunity for good. Drawing on two decades as an ethics advisor guiding corporations and leaders, academic institutions, nonprofit organizations, and students in her Stanford University ethics courses, Susan Liautaud provides clarity to blurry ethical questions, walking you through a straightforward, four-step process for ethical decision-making you can use every day. Liautaud also explains the six forces driving virtually every ethical choice we face. Exploring some of today's most challenging ethics dilemmas and showing you how to develop a clear point of view, speak out with authority, make effective decisions, and contribute to a more ethical world for yourself and others, The Power of Ethics is the must-have ethics guide for the 21st century.

Ethical Issues in Social Work

Dynamic, rapid, and radical changes are transforming the communication professions, provoking major implications for ethics. Traditional boundaries blur as media converge; relentless competitive pressures cause some forms of communication to atrophy and permit others to explode; and technological advances occur daily. In this volume, a new generation of scholars take a fresh look at the manner in which ethical issues manifest themselves in their areas of research and suggest new agendas for future research. This book addresses a wide range of questions from a variety of communication professions. Contributors tackle such issues as how to define a journalist in an era when anyone can disseminate information to a global audience; how to use "advergames," crowdsourcing, and facial recognition technology in advertising responsibly; and how to respond ethically in situations of public crisis communication, among many others. This volume will be critical reading for scholars and professionals in media, communication, and digital arts, as well as philosophy, government, public policy, business, and law.

This book provides up-to-date critical analyses of the ethical implications of new legislation in community care and criminal justice, and of trends in social work thought and policy, such as managerialism, user empowerment and feminism.

With rapid advancements in human enhancement technologies, society struggles with many issues, such as definition, effects, participation, regulation, and control. Current and future initiatives in these technologies may not be in the participants' best interests; therefore, it is imperative for research on humanitarian considerations to be available to those affiliated with this field. Global Issues and Ethical Considerations in Human Enhancement Technologies compiles prestigious research and provides a well-rounded composite of the field's role in emerging technologies. Addressing both present and future concerns, this publication serves as a valuable reference work for researchers, students, professionals, and practitioners involved in computer science and the humanities, as well as many engaged in a humanities approach to metasystems, new artificial life, and robotics.

An introduction to the social and policy issues which have arisen as a result of IT. Whilst it assumes a modest familiarity with computers, the book provides a guide to the issues suitable for undergraduates. In doing so, the author prompts students to consider questions such as: * How do morality and the law

relate to each other? * What should be covered in a professional code of conduct for information technology professionals? * What are the ethical issues relating to copying software? * Is electronic monitoring o employees wrong? * What are the moral codes of cyberspace? Throughout, the book shows how in many ways the technological development is outpacing the ability of our legal systems, and how different paradigms applied to ethical questions often proffer conflicting conclusions. As a result, students will find this a thought-provoking and valuable survey of the new and difficult ethical questions posed by the Internet, artificial intelligence, and virtual reality.

Ethics and Professional Issues in Couple and Family Therapy, Second Edition builds upon the strong foundations of the first edition. This new edition addresses the 2015 AAMFT Code of Ethics as well as other professional organizations' codes of ethics, and includes three new chapters: one on in-home family therapy, a common method of providing therapy to clients, particularly those involved with child protective services; one chapter on HIPAA and HITECH Regulations that practicing therapists need to know; and one chapter on professional issues, in which topics such as advertising, professional identity, supervision, and research ethics are addressed. This book is intended as a training text for students studying to be marriage and family therapists.

This book explicitly addresses ethical dilemmas and issues that post-secondary ESL faculty commonly encounter and examines them in the framework of social justice concerns. Ethics is defined broadly, to include responsibilities and obligations to students inside and outside the classroom, as well to colleagues, educational institutions, the TESL profession, and society as a whole. Scenarios in each chapter provide realistic and compelling situations for reflection and discussion. The authors then set out the issues raised, relate them to the classroom environment, and offer opportunities to examine them in a variety of contexts and to consider possible solutions to the dilemmas. Issues include testing, plagiarism, technology, social and political issues affecting students and the classroom, gift-giving, curriculum decisions, disruptive students, institutional constraints, academic freedom, gender, class, and power. Busy classroom instructors will find this book accessible, thought-provoking, and relevant to their daily work situations. It is not intended as a theoretical treatment of ethics and social justice in ESL, nor does it propose that ESL faculty teach morals or ethics to students. Rather, it is designed as a concise, practical introduction to ethical practice for both new and experienced ESL faculty in post-secondary teaching situations in the United States, for others interested in the ESL classroom, and as a text for TESL classes and seminars. Ethical Issues for ESL Faculty: *maps new territory in the field--ethical issues in TESL, particularly as encountered by post-secondary classroom teachers, are not often discussed in ESL publications; *makes the complex issues of ethics in the context of social justice accessible to TESL practitioners; and *includes useful resources, such as additional scenarios for discussion, an extensive reference list, and selected ethics-related Web sites.

Thirty years ago, English jurist Patrick Devlin wrote: "Is it not a pleasant tribute to the medical profession that by and large it has been able to manage its relations with its patients ... without the aid of lawyers and law makers". Medical interventions at the beginnings and the endings of life have rendered that assessment dated if not defeated. This book picks up some of the most important of those developments and reflects on the legal and social consequences of this metamorphosis over the past ten years, and will be of interest to students of law, sociology and ethics who want a considered and critical introduction to, and reflection on, key issues in these pivotal moments of human life. The book is divided into two parts.Part One deals with theoretical issues in environmental philosophy, examining a variety of ethical and environmental theories that provide diverse and thought-provoking perspectives on critical ecological issues. Part Two turns to applied environmental ethics, addressing current debates on topics such as climate change, biodiversity loss, wilderness preservation, responsibilities to future generations, population growth, overconsumption, food ethics, and ecological activism.
