This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985.

Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for

developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages

For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context
