Competition Law of the European Community

Indexes the Times, Sunday times and magazine, Times literary supplement, Times educational supplement, Times educational supplement Scotland, and the Times higher education supplement.

The first detailed study of this most important class of systems which contain internal predictive models of themselves and/or of their environments and whose predictions are utilized for purposes of present control. This book develops the basic concept of a predictive model, and shows how it can be embedded into a system of feedforward control. Includes many examples and stresses analogies between wired-in anticipatory control and processes of learning and adaption, at both individual and social levels. Shows how the basic theory of such systems throws a new light both on analytic problems (understanding what is going on in an organism or a social system) and synthetic ones (developing forecasting methods for making individual or collective decisions).

The book provides a comprehensive introduction to the main theoretical and managerial issues of B2B marketing. It shows the significance of B2B marketing in modern economies within the complex network of buying and selling relationships between organizations.

Competition in Europe, which has been chosen as the title for the Essays in Honour of Henk W. de Jong, contains two key concepts, that characterize his scientific contribution to Industrial Organisation. Professor H.W. de Jong is in the first place an economist who is highly inspired by the dynamics of markets in general and the dynamics and conditions of competition in particular. In the second place, H.W. de Jong is a real European economist, not in the sense that his theoretical insights are limited to Europe, but in the sense that his ideas and policy suggestions - especially those concerning competition policy - reflect his sincere involvement in the European integration process and the economic conditions and perspectives of a Common Market for the European Community. In his many illustrations of the evolution of markets and the performance of enterprises in different business environments, H.W. de Jong also demonstrates his knowledge of historical and political aspects of different economies in Europe, often in comparison with the United States and Japan.

This book focuses on natural gas and synthetic methane as contemporary and future energy sources. Following a historical overview, physical and chemical properties, occurrence, extraction, transportation and storage of natural gas are discussed. Sustainable production of natural gas and methane as well as production and storage of synthetic methane are scrutinized next. A substantial part of the book addresses construction of vehicles for natural and synthetic methane as well as large engines for industrial and maritime use. The last chapters present some perspectives on further uses of renewable liquid fuels as well as natural gas for industrial engines and gas power plants.
