The Garden of Evil is the sixth in the Nic Costa series, David Hewson's detective novels of love and death in the Eternal City. The picture possessed a frightful beauty, one which burned so brightly that, once witnessed, could never be unseen . . . Even the presence of two corpses, one clearly murdered, the other dead through strange and suspicious circumstances, did nothing to distract their attention from the canvas . . . In a hidden studio in an area of Rome where the Vatican liked to keep an eye on the city's

prostitutes, an art expert from the Louvre is found dead in front of one of the most beautiful paintings that Nic Costa has ever seen – an unknown Caravaggio masterpiece. But before long tragedy will strike Nic far closer to home. The main suspect's identity is known, but he remains untouchable – protected in his grand palazzo by a fleet of lawyers and a sinister cult known as the Ekstasists. If Costa and his team can crack the reasons for the cult's existence, he may well stand a chance of nailing the double-killer. But the mystery will take him right back to Caravaggio himself and the reasons he had to flee Rome all those centuries before . . .

Information about people is becoming increasingly valuable. Enabled by new technologies, organizations collect and process personal data on a large scale. Free flow of data across Europe is vital for the common market, but it also presents a clear risk to the fundamental rights of individuals. This issue was addressed by the Council of the European Union and the European Parliament with the introduction of the General Data Protection Regulation (GDPR). For many organizations processing personal data, the GDPR came as a shock. Not so much its publication in the spring of 2016, but rather the articles that appeared about it in professional journals and newspapers leading to protests and unrest. "The heavy requirements of the law would cause very expensive measures in companies and organizations", was a concern. In addition, companies which failed to comply "would face draconian fines". This book is intended to explain where these requirements came from and to prove that the GDPR is not incomprehensible, that the principles are indeed remarkably easy to understand. It will help anyone in charge of, or involved in, the processing of personal data to take

advantage of the innovative technologies in processing without being unduly hindered by the limitations of the GDPR. The many examples and references to EDPB (European Data Protection Board) publications, recent news articles and case law clarify the requirements of the law and make them accessible and understandable. "Leo's book can provide very effective support to you and your colleagues in reaching this understanding and applying it in practice." Fintan Swanton, Managing Director of Cygnus Consulting Ltd., Ireland.

**In *Addicted to Love*, Jan Geurtz clearly demonstrates how our search for love and approval stems from a fundamental self-rejection. We try to compensate for this by seeking other people's appreciation. But this is counterproductive: it actually makes us more insecure and therefore increasingly dependent. This creates an addiction to love, approval and the security of a relationship. As a result, most romantic relationships eventually fail, or - perhaps even worse - are reduced to dreary co-existence with little room for growth and happiness. With humour and practical examples, Jan Geurtz shows a way out of this vicious circle. Once we have let go of self-rejection, we find that our painful emotions, and also our sexual desires, are the gateway to a state of being that is completely free of restriction and dependence, and is filled with love and clarity - with or without a relationship. Jan Geurtz has written several books on addictions, including the bestseller *Quit Smoking in One Day*. He studied remedial pedagogy, education sciences and philosophy of science, and is inspired by Buddhism.**

*prejudices—our frames. They want to show us that these frames are tools, and that we can optimise their use.” —Forbes From pandemics to populism, AI to ISIS, wealth inequity to climate change, humanity faces unprecedented challenges that threaten our very existence. The essential tool that will enable humanity to find the best way forward is defined in Framers by internationally renowned authors Kenneth Cukier, Viktor Mayer-Schönberger, and Francis de Véricourt. To frame is to make a mental model that enables us to make sense of new situations. Frames guide the decisions we make and the results we attain. People have long focused on traits like memory and reasoning, leaving framing all but ignored. But with computers becoming better at some of those cognitive tasks, framing stands out as a critical function—and only humans can do it. This book is the first guide to mastering this human ability. Illustrating their case with compelling examples and the latest research, authors Cukier, Mayer-Schönberger, and de Véricourt examine:*

- Why advice to “think outside the box” is useless*
- How Spotify beat Apple by reframing music as an experience*
- How the #MeToo twitter hashtag reframed the perception of sexual assault*
- The disaster of framing Covid-19 as equivalent to seasonal flu, and how framing it akin to SARS delivered New Zealand from the pandemic*

*Framers shows how framing is not just a way to improve how we make decisions in the era of algorithms—but why it will be a matter of survival for humanity in a time of societal upheaval and machine prosperity. For a scientist committed to empirical evaluation, it is important to show that materials can be helpful outside the context of a therapeutic relationship, so, generally speaking, we know that*

*a book like this is likely to be helpful. Several of the specific components in this book have been tested, sometimes in a form very similar to the way you are contacting this material. For example, several studies evaluated the impact of short passages drawn nearly word for word from ACT materials (very similar to what you've read) that were recorded on audiotape, read aloud by a research assistant, or were presented to the participants to read. Typically, these studies focused on the ability of participants to tolerate distress of various kinds, such as gas-induced panic-like symptoms, extreme cold, extreme heat, or electric shock. A few studies looked at the distress produced by difficult or intrusive cognitions, or clinically relevant anxiety. Some were done with patients, others with normal populations. The specific ACT components that have been examined so far include defusion, acceptance, mind-fulness, and values. The techniques included exercises, metaphors, and rationales, including several that can be found in this book (e.g., word repetition, physicalizing, leaves on a stream, the quicksand metaphor, the Chinese finger trap metaphor, and so forth). Thus, it seems fair to say that it is known that at least some of what you've read can be helpful at least some of the time outside of the context of a therapeutic relationship, when presented in a form similar to the form in which you have contacted this material.*

*A science writer and recreational runner explores the science behind popularly held beliefs about shoes, injuries, nutrition, "runner's high," and more. Conventional wisdom about running is passed down like folklore (and sometimes contradicts itself): the right kind of shoe prevents injury--or running barefoot, like our prehistoric ancestors, is best; eat a high-fat diet--and also carbo load before a race; running cures depression--but it might be addictive; running can save your life--although it can also destroy your knee cartilage. Often it's hard to know what to believe. In Running Smart, Mariska van Sprundel, a science journalist and recreational runner who has had her fair share of injuries, sets out to explore the science behind such claims. In her quest, van Sprundel reviews the latest developments in sports science, consults with a variety of experts, and visits a sports lab to have her running technique*

She learns, among other things, that according to evolutionary biology, humans are perfectly adapted to running long distances (even if our hunter-gatherer forebears suffered plenty of injuries); that running sets off a shockwave that spreads from foot to head, which may or may not be absorbed by cushioned shoes; and that a good sports bra controls the ping pong-like movements of a female runner's breasts. She explains how the body burns fuel, the best foods to eat before and after running, and what might cause "runner's high." *The Danish Bestseller Now Available in English Dr Pia Callesen presents the first practical book on metacognitive therapy, a groundbreaking new treatment proven to stop depression in its tracks. Many of us struggle with overthinking. We endlessly analyse what we've said and done or the decisions we have to make. Rarely does this treat the stresses of our lives. Often we become overwhelmed; we end up feeling powerless, spiralling into sadness and even depression. Live More Think Less presents a radical strategy to take back control of our thinking processes. From training our attention to leaving our negative trigger-thoughts on the conveyor belt, the book guides us towards living better through mastering the attention we pay to our thoughts and how we act upon them. Dit boek gaat over het hoe van projectmanagement en hoe je als projectmanager met een proactieve houding ook in moeilijke situaties regie houdt. Hoe je een beïnvloeder wordt van de weg naar het resultaat, van je omgeving, van je team én van je eigen effectiviteit. Er wordt steeds meer verwacht van de projectmanager. Uitdagende doelstellingen, hoge druk op kosten en doorlooptijden, verschillende belangen van stakeholders en vele afhankelijkheden tussen deelprojecten zorgen voor een steeds grotere complexiteit. En dat in een omgeving waarin veranderingen en onzekerheden de standaard geworden zijn. Daarbij dient het creatieve vermogen van de kenniswerker maximaal te worden benut, wat vraagt om minder hiërarchische organisatievormen en multidisciplinaire samenwerking. Het beschikken over projectmanagement-vaardigheden wordt hierdoor belangrijk op bijna alle niveaus in de organisatie. Door alle uitdagingen groeit de vraag naar allesomvattende methoden en maakt Agile een enorme opmars. Anderzijds is er juist in de toegenomen complexiteit behoefte aan eenvoud. Daarover gaat dit boek. Terug naar de kern, in staat zijn om de nuttige elementen uit verschillende methoden te combineren en aandacht geven aan het allerbelangrijkste: de mens achter de projectmanager! Wat je van dit boek kunt leren: Wat de basistechnieken zijn van de projectmanager, passend in zowel een Agile als in een traditionele omgeving Hoe je de vele beschikbare projectmanagement-methoden integreert in je eigen werkproces Hoe je met het juiste leiderschap en gedrag enorme winst kunt behalen in effectiviteit en efficiëntie door altijd de regie te nemen (de factor

Johann Sebastian Bach's music forms the backdrop to this stunning novel about motherhood. Following the death of her daughter, a bereaved pianist immerses herself in Bach's Goldberg Variations. As the woman perfects the complex musical architecture of Bach's own study in g memories of her past unfold. A family - mother, father, son, and daughter - appear during vari of their lives together in this story, which builds up to a crescendo of great emotional power written with a powerful insight into grief and mourning, Counterpoint - by Anna Enquist, one Holland's best loved writers of quality fiction - has already sold 100,000 copies in the Nether and has been masterfully translated into many languages. Enquist is also the author of the w translated and bestselling novels The Secret and The Masterpiece.

"This volume, the result of four years of work performed by the combined research groups of University (Faculty of Humanities) and the HU Utrecht University of Applied Sciences (Faculty Education), focuses on the central theme of 'Normative Professionalization'. Drawing on a wide variety of scholars including Hannah Arendt, Gert Biesta, Harry Kunneman, Donald Schön and C. Argyris, and engaging with professionalism, ethics, virtue and morality, this book builds the argument that learning to deal with complexity supports not only education but the personal development of teachers and the improvement of society and democracy as well. This volume presents research on a broad range of topics such as worldview education, co-teaching, moral authorship, traditional perspectives on education, the discourse on citizenship, teacher education, and the question of religion and education. The research chapters explain the theoretical lenses and methodological approaches which have been employed to get a grip on complexity. The results have been interpreted in light of the concepts of *horror complexitatis*, *amor complexitatis* and *dolor complexitatis*. Guided by detailed research accounts of worldview descriptions provided by students and teachers, this book has been enriched with the notion of a *passio complexitatis*. In the concluding chapters, the book advocates for an improved balance between the normative and instrumental professionalization of teachers, in order to create space for the improvement of pedagogical relations and processes and to reintroduce the moral dimensions of education. The claim throughout this book is that allowing for complexity in education – even going so far as to embrace it – is vital for the improvement of education and a prerequisite for more authentic relationships (on the micro level) and the maintenance of a functioning democracy and a balanced society (on the macro level). This book is of interest to researchers and educators who are interested in normative professionalization, to qualitative and practice oriented researchers, to teachers and managers in primary, secondary and professional education.

education, and to the wider public which is concerned with the significance of education for the development of a stable and sustainable society."

This elegant and nuanced literary gem explores the intricacies of friendship, secrets, and two lives for fans of *The Dinner and Dept. of Speculation*. "Often I am happy and yet I want to cry; / For I fully share my joy." -B.S. Ingemann Ellinor is seventy. Her husband Georg has just passed away and she is struck with the need to confide in someone. She addresses Anna, her long-dead best friend who was also Georg's first wife. Fully aware of the absurdity of speaking to someone who cannot hear, Ellinor nevertheless finds it meaningful to divulge long-held secrets and burdens of her past: her mother's heartbreaking pride; Ellinor's courtship with her first husband; their seemingly charming friendship with Anna and Georg; the disastrous ski trip that shattered the two couples' lives. In a mellow yet infused with subdued emotion, this philosophical, lyrical novel moves in parallel narrative threads while questioning the assumptions we cherish concerning identity and love.

'Highly recommended' *Financial Times Today* we know of only a single planet that hosts life: the Earth. But across a Universe of at least 100 billion possibly habitable worlds, surely our planet isn't the only one that, like the porridge Goldilocks sought, is just right for life? Astrobiologists search the galaxy for conditions that are suitable for life to exist, focusing on similar worlds located at the perfect distance from their Sun, within the aptly named 'Goldilocks Zone'. Such a place might have liquid water on its surface, and may therefore support a thriving biosphere. What might life look like on other worlds? It's possible to make best-guesses using facts rooted in science, and by studying 'extremophiles' such as the near-indestructible water bears, which can survive in the harshest conditions that Earth, even space, can offer. *Goldilocks and the Water Bears* is a tale of the origins and evolution of life on Earth, and the quest to find it on other planets, on moons, in other galaxies, and throughout the Universe.
