There are more young people in the world today than ever before. Yet surprisingly little is known about the current state of affairs in youth development. Measuring the well-being of young people continues to be a challenge, even though its importance is widely recognised. The Commonwealth's youth flagship report, the Global Youth Development Index and Report, provides an evidence-based overview of the state of development for the nearly 1.8 billion young people between the ages of 15 and 30 in the world. The Youth Development Index (YDI) is a composite index of 18 indicators that collectively measure progress on youth development in 183 countries, including 49 of the 53 Commonwealth countries. The YDI has five domains, measuring levels of education, health and well-being, employment and opportunity, political participation and civic participation among young people.

In the recent decade, governments worldwide are increasingly

focusing on being community-centric and outcomes-based. Consequently, they are starting to move towards outcomes-based approaches to public financial management systems. An outcomes-based approach allows government service agencies and specific program areas to organize and communicate priorities to achieve what matters and makes a difference rather than just going through the motions. Empirical evidence on how government agencies in emerging economies go about this contemporary approach and issues affecting these practices is limited. This edited collection of chapters is aimed at covering public sector reform and performance management in emerging economies with special reference to outcomes-based approaches in practice in government services. Practices from developed economies contained in the first book on the topic have been published by Routledge in February 2021. The insights offered on the topic are written by renowned scholars who have identified important issues pertinent to those interested in public sector governance, accounting, accountability, and performance management effectiveness in emerging economies. The book will be highly accessible to researchers, academics, and students in the fields of accounting, public administration, development studies, and other non-accounting audiences alike. After years of pursuing a denim design career, Maris Carrington never imagined trading her Chicago studio for a New England shingled cottage. But when her life sketch takes an unexpected shape - smudged with a pastel seaside setting, rendered with pencil strokes of her father's estate shading family secrets, and inked with silhouettes of old friends reconnecting on a weathered boardwalk - nothing is what it seems as illusion blends with reality"--Cover verso.

The Girl who spoke to the Wind is a modern fable about the power of love that exists inside us all. It is a story of friendship and loss, and how we recover to grow past sadne

Twenty-first century governments must keep pace with the expectations of their citizens and deliver on the promise of the digital age. Data-driven approaches are particularly effective for meeting those expectations and rethinking the way governments and citizens interact. This report highlights the important role data can play in creating conditions that improve public services, increase the effectiveness of public spending and inform ethical and privacy considerations. It presents a data-driven public sector framework that can help countries or organisations assess the elements needed for using data to make better informed decisions across public sectors.

*This book examines a range of current issues in Islamic development management. The first part of the book explores practical issues in governance and the application of Islamic governance in new areas such as quality management systems and the tourism industry, while the second delves into questions of sustainability. The book proposes a new Islamic sustainability and offers new perspectives on CSR in connection with waqf (Islamic endowments) and microfinance. The third part of the book addresses Islamic values and how they are applied in entrepreneurship, inheritance, consumer behavior and marketing. The fourth part examines the issues of waqf and takaful (a form of insurance in line with the Islamic laws), while the fifth discusses the fiqh (the study of Islamic legal codes) and legal framework from the perspectives of entrepreneurship, higher education, reporting and inheritance (wills). The final chapter is dedicated to the application of Islamic principles in various other issues. Written in an accessible style, the book will appeal to newcomers to the field, as well as researchers and academics with an interest in Islamic development management.*

*Geodesy is the science of accurately measuring and understanding three fundamental properties of Earth: its geometric shape, its orientation in space, and its gravity field, as well as the changes of these properties with time. Over the past half century, the United States, in cooperation with international partners, has led the development of geodetic techniques and instrumentation. Geodetic observing systems provide a significant benefit to society in a wide array of military, research, civil, and commercial areas, including sea level change monitoring, autonomous navigation, tighter low flying routes for strategic aircraft, precision agriculture, civil surveying, earthquake monitoring, forest structural mapping and biomass estimation, and improved floodplain mapping. Recognizing the growing reliance of a wide range of scientific and societal endeavors on infrastructure for precise geodesy, and recognizing geodetic infrastructure as a shared national resource, this book provides an independent assessment of the benefits provided by geodetic observations and networks, as well as a plan for the future development and support of the infrastructure needed to meet the demand for increasingly greater precision.
