Justice Ron Goodman is a trial judge at the center of a high-profile medical malpractice case, and the stakes are enormous. When one of the defendants, Dr. DiTucci, is killed and another has his car blown up, Detective Jack Zangara, a friend of Goodman's, realizes that there is a connection between the case and the murder. Thus begins a complex game of treachery, deceit, and contract killings. The malpractice case centers around a woman who is near death as a result of a botched

operation at a prominent New York hospital with particularly deep pockets-a ripe target for seven-figure insurance claims. But Dr. DiTucci's suspicious death only raises more questions for all involved: who killed him-and who will be next? When Zangara alerts Goodman to the possible chicanery going on in his courtroom, the two men must determine if the woman is the victim of flagrant medical malpractice, or if mobsters are killing doctors merely to win a lawsuit. Soon an ever-widening web of players emerges that includes organized crime heads, hit men,

Should we change our current clock and/or calendar to make them better? For example: why are there 60 minutes in an hour, or why do we have 28, 29, 30, or 31 days in a month? In the first unit, Rick gives us a brief introduction and some historical theories as to how and why man started keeping track of time. In one of the sections in this unit, Rick tries to show how the ages in the Bible's genealogy from Adam to Noah are more realistic

by using lunar years instead of solar. He concludes this unit with his version of time zones. The second unit is dedicated to clocks and other hour-measuring devices. Sundials, water clocks, candles, mechanical, and atomic clocks are some of the types mentioned. The reader is given information to explain why the day was divided into 24 hours and why the hour was divided into 60 minutes. Rick concludes this unit by

Make studying history fun and interactive to motivate your students. Encourage teamwork, creativity, reflection, and decision making. Take an active approach to teaching while inspiring your students to make their own explorations of world history.

The Archaeology of Native North America presents the ideas, evidence, and debates regarding the initial peopling of the continent by

mobile bands of hunters and gatherers and the cultural evolution of their many lines of descent over the ensuing millennia. The emergence of farming, urban centers, and complex political organization paralleled similar developments in other world areas. With the arrival of Europeans to North America and the inevitable clashes of culture, colonizers and colonists were forever changed, which is also represented in the archaeological heritage of the continent. Unlike others, this book includes

Mesoamerica and the Caribbean, thus addressing broad regional interactions and the circulation of people, things, and ideas. This edition incorporates results of new archaeological research since the publication of the first edition a decade earlier. Fifty-four new box features highlight selected archaeological sites, which are publicly accessible gateways into the study of North American archaeology. The features were authored by specialists with direct knowledge of the

sites and their broad importance. Glossaries are provided at the end of every chapter to clarify specialized terminology. The book is directed to upper-level undergraduate and graduate students taking survey courses in American archaeology, as well as other advanced readers. It is extensively illustrated and includes citations to sources with their own robust bibliographies, leading diligent readers deeper into the professional literature. text for courses in North American archaeology. According to Mayan prophecy, the world will end December 21, 2012. It is a mystery how the Mayans came to this conclusion; it is also a mystery how to stop certain doom. But in all their wisdom, is there a possibility that the Mayans knew how to postpone the end of the world? If so, could there be an ancient text that reveals the answer archaeologists seek? Anthropologist Kate OHara thinks so. She and a team of fellow academics stumble

Making learning fun and interactive is a surefire way to excite your social studies students. This book includes game-formatted activities for major historical topics. While the goal of these

activities is to create excitement and to spark interest in further study, they are also standards based and include grading rubrics and ideas for assessment. This volume is designed to recognize the important role that epigraphy has come to play in Middle American scholarship and to document significant achievements in three areas: dynastic history, phonetic decipherment, and calendrics. The book covers four of the major pre-Columbian scripts in the region (Zapotec, Mixtec, Aztec, and Maya) and one that is relatively unknown (Tlapanec).

Observations of the sun, moon, planets, and stars played a central role in ancient Maya lifeways, as they do today among contemporary Maya who maintain the traditional ways. This pathfinding book reconstructs ancient Maya astronomy and cosmology through the astronomical information encoded in Precolumbian Maya art and confirmed by the current practices of living Maya peoples. Susan Milbrath opens the book with a discussion of modern Maya beliefs about astronomy, along with essential information on naked-eye observation. She devotes subsequent chapters to Precolumbian astronomical imagery, which she traces back through time, starting from the Colonial and Postclassic eras. She delves into many

aspects of the Maya astronomical images, including the major astronomical gods and their associated glyphs, astronomical almanacs in the Maya codices [painted books], and changes in the imagery of the heavens over time. This investigation yields new data and a new synthesis of information about the specific astronomical events and cycles recorded in Maya art and architecture. Indeed, it constitutes the first major study of the relationship between art and astronomy in ancient Maya culture.
