Academies and Free Schools in England argues that there is a high degree of philosophical consensus and historical continuity on the policy of 'academisation' across the main political parties in England. It attempts to make sense of what are all essentially free schools by interviewing the architects of policy and their closest advisors, analysing the extent to which they invoke historical expressions of conservatism and/or liberalism in their articulation of that convergence. The book offers a unique insight into educational policy-making during the Conservative/Liberal-Democrat coalition era (2010-2015), and an in-depth analysis of the nature of liberty as it relates to state education in England. Providing original interview transcripts of the key reformers, and new accounts of a sometimes contentious history, Hilton identifies an elite 'policy community', connected by educational background, moral-religious frameworks, life experiences and shared networks of common ideology. Academies and Free Schools in England will be vital reading to academics and researchers in the field of education and education policy. It will also be of great interest to school governors, business leaders, political philosophers and those involved and interested in free schools.

The Beijing-Islamabad axis plays a central role in Asia's geopolitics, from India's rise to the prospects for a post-American Afghanistan, from the threat of nuclear terrorism to the continent's new map of mines, ports and pipelines. China is Pakistan's great economic hope and its most trusted military partner; Pakistan is the battleground for China's encounters with Islamic militancy and the heart of its efforts to counter-balance the emerging US-India partnership. For decades, each country has been the other's only 'all-weather' friend. Yet the relationship is still little understood. The wildest claims about it are widely believed, while many of its most dramatic developments are hidden from the public eye. This book sets out the recent history of Sino-Pakistani ties and their ramifications for the West, for India, for Afghanistan, and for Asia as a whole. It tells the stories behind some of its most sensitive aspects, including Beijing's support for Pakistan's nuclear program, China's dealings with the Taliban, and the Chinese military's planning for crises in Pakistan. It describes a relationship increasingly shaped by Pakistan's internal strife, and the dilemmas China faces between the need for regional stability and the imperative for strategic competition with India and the USA.

Kapitalismen er i krise. De rike har blitt rikere - den øverste

prosenten eier 44 prosent av verdens rikdom – mens klimaendringene endrer livet på jorden. Hvordan kan vi løse disse problemene som har vokst fram gjennom årtier? Denne boka tar for seg de store utfordringene i verden på en radikalt ny måte. Global oppvarming, forurensning, demens, fedme, skytevåpenepidemi, mobilitet – disse dilemmaene knyttet til miljø, helse og sosiale forhold er enorme, komplekse og har ingen enkle løsninger. Mariana Mazzucato mener at for å løse vår tids store problemer må vi tenke større, og bruke ressursene våre på en måte som er like dristig og inspirerende som månelandingen i 1969. Vi må restrukturere kapitalismen fundamentalt og gjøre den inkluderende og bærekraftig. Vårt økonomiske system må løse konkrete problemer, fra den digitale kløften og livstruende pandemier til forurensningen i byene. Dette innebærer at bedrifter, samfunn og myndigheter må samle seg om felles mål. En ny økonomi. Hvordan månelandingen inspirerer til å endre kapitalismen er oversatt av Eivind Lilleskjæret. Mariana Mazzucato (f. 1968) er en økonom med italiensk-amerikansk statsborgerskap. Hun er professor ved University College London i Economics of Innovation and Public Value og er grunnlegger av deres Institute for Innovation and Public Purpose. Hun har skrevet flere kritikerroste bøker, som *The Entrepreneurial State* og *The Value of Everything*. *Times*, *Financial Times* and *Quartz* har alle omtalt henne som en av vår tids mest innflytelsesrike økonomer. Hun råder politiske beslutningstakere over hele verden om innovasjonsledet inkluderende og bærekraftig vekst, blant annet som spesialrådgiver for EU-kommisjonen for forskning, vitenskap og innovasjon.

***How will Russia redraw post-Soviet borders? In the wake of recent Russian expansionism, political risk expert Agnia Grigas illustrates how—for more than two decades—Moscow has consistently used its compatriots in bordering nations for its territorial ambitions. Demonstrating how this policy has been implemented in Ukraine and Georgia, Grigas provides cutting-edge analysis of the nature of Vladimir Putin’s foreign policy and compatriot protection to warn that Moldova, Kazakhstan, the Baltic States, and others are also at risk.***

Since the second edition, the chemical warfare agent community has worked hard to advance research for protection and treatment and develop/improve response approaches for individuals and definitive care. Consequently, in addition to updating previous chapters, Chemical Warfare Agents: Biomedical and Psychological Effects, Medical Countermeasures, and Emergency Response, Third Edition features several new chapters that address the Syrian War, chemical destruction, the Organisation for the Prohibition of Chemical Weapons, biomarkers for chemical warfare agent exposure, field sensors, aircraft decontamination, lung/human on a chip, chemical warfare response decision making, and other research advancements. Features: Includes the most comprehensive coverage of the question of chemical warfare agent use on the battlefield or in terrorism Describes the newest medical interventions, and the latest technologies deployed in the field, as well as developments in the international response to CW usage highlighting recent events in the Middle East Discusses the latest in organizational/interagency partitioning in terms of responsibilities for emergency response, not just in the United States but at the international level—whether prevention, mitigation, medical care, reclamation, or medico-legal aspects of such response Contains the most current research from bench-level experts The third edition contains the most up-to-date and comprehensive coverage of the question of chemical warfare agent employment on the battlefield or in terrorism. Edited by workers that have been in the field for 35+ years, it remains faithful to the scientific "constants," while evaluating and crediting the advances by the industry that have made us safer.***

*The representation of Islam is unquestionably a critical test for comparing journalistic reporting across countries and cultures. The Islamic religion has weight in international reporting (defining what we termed “foreign Islam”), but it is also the religion of numerically important minority groups residing in Europe (“national Islam”). The first part of the book is “setting the scene.” Three chapters provide insights in dominant patterns of the representation of Islam as detected by various authors and studies involved with Islam representation in Europe. Part two, the core section of the book, contributes to the development of the field of comparative journalism studies by comparing several countries and six media systems in Western Europe: the Dutch-speaking part of Belgium (Flanders), the French-speaking part of Belgium (Wallonia), the Netherlands, France, Germany, and the U.K. Part three of this book presents two reception studies, one qualitative and the other quantitative. Equally important, as the bulk of attention goes to Western Europe, is the extension towards the representation of Muslims and Islam outside Western Europe. Part four of the book is devoted to the representation of Islam in some of the so-called BRICs-countries: Russia, China, and India.*

*What are the effects of decreasing social mobility? How does education help - and hinder - us in improving our life chances? Why are so many of us stuck on the same social rung as our parents? Apart from the USA, Britain has the lowest social mobility in the Western world. The lack of movement in who gets where in society - particularly when people are stuck at the bottom and the top - costs the nation dear, both in terms of the unfulfilled talents of those left behind and an increasingly detached elite, disinterested in improvements that benefit the rest of society. This book analyses cutting-edge research into how social mobility has changed in Britain over the years, the shifting role of schools and universities in creating a fairer future, and the key to what makes some countries and regions so much richer in opportunities, bringing a clearer understanding of what works and how we can better shape our future.*

Bringing together analyses of Covid-19 developments in countries and regions across the world with a wide-angle lens on governance, this volume asks: what works, what hasn't and isn't, and why? Organized by region, the book is structured to follow the spread of Covid-19 in the course of 2020, through Asia, the Middle East, Europe, the Americas, and Africa. The analyses explore a number of key themes, including public health systems, government capability, and trust in government—as well as underlying variables of social cohesion and inequality. **The Euro-Crisis and the legal and institutional responses to it have had important constitutional implications on the architecture of the European Union (EU). Going beyond the existing literature, Federico Fabbrini's book takes a broad look and examines how the crisis and its aftermath have changed relations of power in the EU, disaggregating three different dimensions: (1) the vertical relations of power between the member states and the EU institutions, (2) the relations of power between the political branches and the courts, and (3) the horizontal relations of power between the EU member states themselves. The first part of the book argues that, in the aftermath of the Euro-crisis, power has been shifting along each of these axes in paradoxical ways. In particular, through a comparison of the United States, Fabbrini reveals that the EU is nowadays characterized by a high degree of centralization in budgetary affairs, an unprecedented level of judicialization of economic questions, and a growing imbalance between the member states in the governance of fiscal matters. As the book makes clear, however, each of these dynamics is a cause for concern - as it calls into question important constitutional values for the EU, such as the autonomy of the member states in taking decision about taxing and spending, the preeminence of the political process in settling economic matters, and the balance between state power and state equality. The second part of the book, therefore, devises possible options for future legal and institutional developments in the EU which may revert these paradoxical trends. In particular, Fabbrini considers the ideas of raising a fiscal capacity, restoring the centrality of the EU legislative process, and reforming the EU executive power, and discusses the challenges that accompany any further step towards a deeper Economic and Monetary Union. America is becoming a class-based society. It is now conventional wisdom to focus on the wealth of the top 1

percent—especially the top 0.01 percent—and how the ultra-rich are concentrating income and prosperity while incomes for most other Americans are stagnant. But the most important, consequential, and widening gap in American society is between the upper middle class and everyone else. Reeves defines the upper middle class as those whose incomes are in the top 20 percent of American society. Income is not the only way to measure a society, but in a market economy it is crucial because access to money generally determines who gets the best quality education, housing, health care, and other necessary goods and services. As Reeves shows, the growing separation between the upper middle class and everyone else can be seen in family structure, neighborhoods, attitudes, and lifestyle. Those at the top of the income ladder are becoming more effective at passing on their status to their children, reducing overall social mobility. The result is not just an economic divide but a fracturing of American society along class lines. Upper-middle-class children become upper-middle-class adults. These trends matter because the separation and perpetuation of the upper middle class corrode prospects for more progressive approaches to policy. Various forms of “opportunity hoarding” among the upper middle class make it harder for others to rise up to the top rung. Examples include zoning laws and schooling, occupational licensing, college application procedures, and the allocation of internships. Upper-middle-class opportunity hoarding, Reeves argues, results in a less competitive economy as well as a less open society. Inequality is inevitable and can even be good, within limits. But Reeves argues that society can take effective action to reduce opportunity hoarding and thus promote broader opportunity. This fascinating book shows how American society has become the very class-defined society that earlier Americans rebelled against—and what can be done to restore a more equitable society.

***The Oxford Handbook of Population Ethics presents up-to-date theoretical analyses of various problems associated with the moral standing of future people and animals in current decision-making. Future people pose an especially hard problem for our current decision-making, since their number and their identities are not fixed but depend on the choices the present generation makes. Do we make the world better by creating more people with good lives? What do we owe future generations in terms of justice? How should burdens and benefits be shared across generations so that justice prevails? These questions are philosophically difficult and important, but also directly relevant to many practical decisions and policies. Climate change policy provides an example, as the increasing global temperature will kill some people and prevent many others from ever existing. Many other policies also influence the size and make-up of future populations both directly and indirectly, for example those concerning family planning, child support, and prioritization in health-care. If we are to adequately assess these policies, we must be able to determine the value of differently sized populations. The essays in this handbook shed light on the value of population change and the nature of our obligations to future generations. It brings together world-leading philosophers to introduce readers to some of the paradoxes of population ethics, challenge some fundamental assumptions that may be taken for granted in the debate about the value of population change, and apply these problems and assumptions to real-world decisions.***

***Neoliberal globalization is in deep crisis. This crisis is manifested on a global scale and embodies a number of fundamental contradictions, a central one of which is the global rise of authoritarianism and fascism. This emergent form of authoritarianism is a right-wing reaction to the problems generated by globalization supported and funded by some of the largest and most powerful corporations in their assault against social movements on the left to prevent the emergence of socialism against global capitalism. As the crisis of neoliberal global capitalism unfolds, and as we move to the brink of another economic crisis and the threat of war, global capitalism is once again resorting to authoritarianism and fascism to maintain its power. This book addresses this vital question in comparative-historical perspective and provides a series of case studies around the world that serve as a warning against the impending rise of fascism in the 21st century.***

***norms collide? When does transnational activism lead individuals and communities to abandon local norms and embrace international ones? In When Norms Collide, Karisa Cloward presents a path-breaking theoretical framework for understanding the processes by which individuals negotiate competing demands placed on them by international and local norms. Drawing on extensive fieldwork with local communities in Kenya, she applies the theory to the practices of female genital mutilation and early marriage. Cloward argues that, when faced with international normative messages, individuals can decide to change their attitudes, their behavior, and the public image they present to international and local audiences. Moreover, the impact of transnational activism on individuals substantially depends on the salience of the international and local norms to their respective proponents, as well as on community-level factors.***

This book provides a unique perspective on addressing issues of various forms of violence against children from scholars within their own country. Bringing together cross-disciplinary expertise, this volume addresses a vast range of topics related to child abuse and neglect in Uganda. Exploring areas from the protection of street children to cultural proverbs related to child maltreatment, this volume examines issues both specific to the Ugandan contexts as well as broadly experienced in child maltreatment work in non-Euro-American countries. This book surveys the breadth of the child protection field, covering issues of children's universal rights, challenges of protection and ethical quandaries in researching and addressing maltreatment.

Respiratory protection includes devices and management techniques for keeping people safe from hazardous materials. This handbook presents the state-of-the-art in respiratory protection technology as well as best management practices for work centers. Included are topics relevant to industry, government, and healthcare that provide guidance and tools for ensuring the best possible protection for workers. Most books on this topic are at least 20 years old. Research, technology and management techniques have advanced over the past two decades. This new handbook is needed to provide updated information relevant to today's occupational needs for industrial hygiene and safety professionals.

This latest Fifth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC) will again form the standard reference for all those concerned with climate change and its consequences, including students, researchers and policy makers in environmental science, meteorology, climatology, biology, ecology, atmospheric chemistry and environmental policy.

Friedrich Hayek's 1944 Road to Serfdom is a classic of conservative economic argument. While undeniably a product of a specific time in global politics – which saw the threat of fascism from Nazi Germany and its allies beguilingly answered by the promises of socialism – Hayek's carefully constructed argument is a fine example of the importance of good reasoning in critical thinking. Reasoning is the art of constructing good, persuasive arguments by organizing one's thoughts, supporting one's conclusions, and considering counter-arguments along the way. The Road to Serfdom illustrates all these skills in action; Hayek's argument was that, while many assumed socialism to be the answer to totalitarian, fascist regimes, the opposite was true. Socialist government's reliance on a large

state, centralised control, and bureaucratic planning – he insisted – actually amounts to a different kind of totalitarianism. Freedom of choice, Hayek continued, is a central requirement of individual freedom, and hence a centrally planned economy inevitably constrains freedom. Though many commentators have sought to counter Hayek's arguments, his reasoning skills won over many of the politicians who have shaped the present day, most notably Margaret Thatcher and Ronald Reagan.

Shattered Minds is the first book to investigate how American military bureaucracies have let our troops down by failing to upgrade one of the most important pieces of personal safety equipment: the combat helmet. Two longtime employees of North Dakota defense contractor Sioux Manufacturing discovered that the required density of the Kevlar material woven into the netting of combat helmets was being shorted. After bringing their discovery to the attention of management, their boss, rather than cleaning up the illegal practice, accused them of having an adulterous affair. Both employees were fired, leading to a lawsuit and a court judgment in their favor that eventually brought the company's bad-faith practices to light. Around the same time, a separate whistleblower, a retired Navy doctor, was pulled into a bizarre struggle with Army and Marine bureaucracies when he discovered from his Marine grandson that the protective webbing inside the military helmets was inadequate. Why was the military so resistant to upgrading the most essential piece of gear to protect soldiers from traumatic brain injury? Interweaving these two whistleblower

stories, Robert H. Bauman and Dina Rasor explain why the military, despite news coverage and congressional hearings on the faulty helmet, continued to do the indefensible. They also suggest how the public, the press, and military institutions can remedy the problem to give U.S. troops effective helmets when serving to protect their country. This brief presents information on occupational injuries from electric shock and arc flash events through a review of literature, electrical incident data, and similar sources. It includes pertinent information such as the nature of the incident, adherence to safety requirements, use of appropriate personal protective equipment (PPE), and extent of injury. Chapters address arc flash and shock hazards, and the need for empirical incident data on the actual hazards that may be experienced when equipment faults or adverse electrical events occur. Certain tasks where the risk of an arc flash or shock hazard may be lower, such as normal operation of properly installed and maintained equipment, may not require the use of any special PPE. Some of this risk reduction is based on anecdotal data, and the brief details why future research challenges will need more empirical incident data on the actual hazards and associated injuries that may be experienced when equipment faults or adverse electrical events occur. Designed for professionals and researchers in fire protection engineering, workplace electrical tasks, or workplace safety, this brief offers a thorough overview of the trends in electrical injuries and the costs related to those injuries.

*Studies in Employment and Social Policy Volume 56 Digitalization, far from being solely a technological issue, has broad implications in the social, labour, and economic spheres. It leads to dangers as well as to new chances for the workforce, and thus labour law must develop effective ways to both protect workers and allow them to profit from new technological developments. The most thorough book of its kind, this collection of expert essays provides an abundance of well-thought-out material for*

*understanding the consequences of digitalization for the labour market and industrial relations. Recognizing that only an international perspective can make it possible to face the challenges of the present (and the future), renowned authorities from the International Labour Organization and the International Society for Labour and Social Security Law, as well as outstanding labour law professors, examine in depth such salient issues as the following: transformation of production systems; the spread of artificial intelligence; precariousness and exploitation in the gig economy; lessons learned from COVID-19; employment status of platform workers; new cross-border issues; rights to trade union association and collective bargaining; role of the State in the new digital labour market; and blurred lines between work and private life. Thanks to the international team of contributors, the issues are dealt with from a variety of overlapping perspectives and points of view, combining aspects of labour law, commercial law, corporate governance, and international law. Highlighting the need to adapt, especially through the right to training, work, and professionalism with respect to the new technological landscape, the book draws on legislative, judicial, and theoretical initiatives suggesting ways of responding positively to the requests for protection that arise in the new forms of production. A uniquely valuable tool for study and reflection for policymakers and academics, the book is also sure to be valued by entrepreneurs, managers, consultants, corporate lawyers, judges, human rights experts, and trade unionists who are interested in the issues of labour, industrial relations, and social rights in European and international contexts.*

*This book focuses on how to formulate a mental health response with respect to the unique elements of pandemic outbreaks. Unlike other disaster psychiatry books that isolate aspects of an emergency, this book unifies the clinical aspects of disaster and psychosomatic psychiatry with infectious disease responses at the various levels, making it an excellent resource for tackling each stage of a crisis quickly and thoroughly. The book begins by contextualizing the issues with a historical and infectious disease overview of pandemics ranging from the Spanish flu of 1918, the HIV epidemic, Ebola, Zika, and many other outbreaks. The text acknowledges the new infectious disease challenges presented by climate changes and considers how to implement systems to prepare for these issues from an infection and social psyche perspective. The text then delves into the mental health aspects of these crises, including community and cultural responses, emotional epidemiology, and mental health concerns in the aftermath of a disaster. Finally, the text considers medical responses to situation-specific trauma, including quarantine and isolation-associated trauma, the mental health aspects of immunization and vaccination, survivor mental health, and support for healthcare personnel, thereby providing guidance for some of the most alarming trends facing the medical community. Written by experts in the field, *Psychiatry of Pandemics* is an excellent resource for infectious disease specialists, psychiatrists, psychologists, immunologists, hospitalists, public health officials, nurses, and medical professionals who may work patients in an infectious disease outbreak.*
