

Jet Program Documents

Perhaps no technological development in the century has more fundamentally transformed human life than the airplane and its support apparatus. The nature of flight, and the activities that it has engendered throughout the world, makes the development of aviation technology an important area of investigation. Why did aeronautical technology take the shape it did? Which individuals and organizations were involved in driving it? What factors influenced particular choices of technologies to be used? More importantly, how has innovation affected this technology? Innovation and the Development of Flight, a first strike at the "new aviation history," represents a significant transformation of the field by relating the subject to larger issues of society, politics, and culture, taking a more sophisticated view of the technology that few historians have previously attempted. This volume moves beyond a focus on the artifact to emphasize the broader role of the airplane and, more importantly, the entire technological system. This suggests that many unanswered questions are present in the development of modern aviation and that inquisitive historians seek to know the relationships of technological systems to the human mind. Some of the subjects discussed are early aeronautical innovation and government patronage; the evolution of relationships among airports, cities, and industry; the relationship of engine development to the entire aviation industry; the Department of Commerce's influence on light plane development; pressure in the Air Force for the development of jet engines; and lessons of the National Aerospace Plane Program. Aviation historians and historians of technology will find Innovation and the Development of Flight a valuable examination of aeronautical innovation providing foundations for continued explorations of this field.

The F-35 Lightning II, also known as the Joint Strike Fighter (JSF), is the Department of Defense's most costly and ambitious aircraft acquisition, seeking to simultaneously develop and field three aircraft variants for the Air Force, Navy, Marine Corps, and eight international partners. The JSF is critical for recapitalizing tactical air forces and will require a long-term commitment to very large annual funding outlays. The current estimated investment is \$323 billion to develop and procure 2,457 aircraft. This report discusses: (1) program cost, schedule, and performance; (2) manufacturing results; and (3) test plans and progress. The report's work includes interviews, cost data, test plans, production measures, and analyses by defense and contractor officials. illus.

This volume provides conceptual syntheses of diverging multilingual contexts, research findings, and practical applications of integrating content and language (ICL) in higher education in order to generate a new understanding of the cross-contextual variation. With contributions from leading authors based in Asia, the Middle East, and Europe, the volume offers comparison of contextualized overviews of the status of ICL across the geographic areas and allows us to identify patterns and advance the scholarship in the field. ICL in teaching and learning has become an important consideration in the endeavors to address linguistic diversity at universities, which has resulted from the growing teacher and student mobility around the world.

Hearing Before the Subcommittee on Oversight and Investigations, Committee on Energy and Commerce, House of Representatives, One Hundred First Congress, Second Session, July 27 and October 9, 1990

This book builds on the Editors' previous work on the analysis of policy borrowing processes in education. A number of prominent researchers in comparative studies contribute articles describing and analysing policy borrowing in a number of historical contexts, with many of the examples testing aspects of the explanatory models developed by Phillips & Ochs. The countries covered include England, Spain, Germany, France, Austria, Japan and South Africa.

Additional Costs and Delays Risk Not Meeting Warfighter Requirements on Time

Since 1987, the Japan Exchange and Teaching (JET) Program has recruited thousands of young college graduates from more than sixty countries, including the United States, to work in Japan for up to five years. Now, thirty years after the program's founding, there are more than 60,000 JET Program alumni worldwide, more than half of them hailing from the United States. The JET Program and the US-Japan Relationship: Goodwill Goldmine argues that JET functions as much more than an opportunity for young people to spend a year or more teaching in Japanese schools or working in municipal offices across the Japanese archipelago. This study examines the JET program as a form of public diplomacy and soft power. Through original survey data and extensive interviews with alumni, the author provides a quantitative analysis of the program's effects and argues that it has been highly useful in shaping interactions between Japan and the United States.

Innovation and the Development of Flight

"Japan's official efforts at internationalization have been painful to witness. . . . The government's JET program is easily the most ambitious and its history and on-the-ground problems offer significant insights into Japan's struggle to open up to the outside. David McConnell's book provides a most interesting analysis of why this process has been so complex and difficult. It tells us much about Japanese society and education at this critical point in time."—Thomas P. Rohlen, author of For Harmony and Strength "In this superb and insightful book, David McConnell explores perhaps the greatest (certainly the biggest) education program in humankind's history, offering patient, balanced analysis of its workings, problems, and accomplishments. McConnell's confucian equanimity and multifaceted perspectives lend the book a depth seldom found in contemporary writing on Japan."—Robert Juppe, First ALT Advisor for the JET Program "This is a very astute, thorough, and personal account of the JET program as a case study of how a program can both change a system and provoke defenses against any change. With his fine ethnographic and analytic material, McConnell reveals the faultlines of "internationalization" in Japan. This is a great contribution to the study of organizations, marginality, and shifts in global and national identity."—Merry White, author of Japanese Families: It Takes a Nation
