Nearly a century's worth of Scurlock photographs combine to form a searing portrait of black Washington in all its guises—its challenges and its victories, its dignity and its determination. Beginning in the early twentieth century and continuing into the 1990s, Addison Scurlock, followed by his sons, Robert and George, used their cameras to document and celebrate a community unique in the world, and a stronghold in the history and culture of the nation's capital. Through photographs of formal weddings, elegant cotillions, ballet studios, and quiet family life, the Scurlocks revealed a world in which the black middle class refused to be defined or held captive by discrimination. From its home on the vibrant U Street corridor, the Scurlock Studio gave us indelible images of leaders and luminaries, of high society and working class, of Washingtonians at work and at play. In photograph after photograph, the Scurlocks captured an optimism and resiliency seldom seen in mainstream depictions of segregated society. Luminaries such as Duke Ellington, Ralph Bunche, Mary McLeod Bethune, Alain Locke, Martin Luther King, Jr., and Lois Mailou Jones testify to the intellectual and cultural vibrancy that was unique to Washington and an inspiration to the nation. Photographs of a Peoples Drugstore protest and Marian Anderson's Easter morning concert at the Lincoln Memorial remind us that the struggle for equality in black Washington began long before the civil rights movement of the 1960s. Offering a rich lens into our past, *The Scurlock Studio and Black Washington* is a powerful trigger of personal and historical memory.

The contents of this Handbook are, in general, similar to IAEA Technical Reports Series No. 156, *Handbook on Nuclear Activation Cross-Sections*, published in 1974. However, there are several important changes in this version, besides the inclusion of more recent data. For example, in Part 1, all the necessary information on standard reference data is now included.

Characteristics and Management

Like most technical disciplines, environmental science and engineering is becoming increasingly specialized. As industry professionals focus on specific environmental subjects they become less familiar with environmental problems and solutions outside their area of expertise. This situation is compounded by the fact that many environmental science related terms are confusing. Prefixes such as bio-, enviro-, hydra-, and hydro- are used so frequently that it is often hard to tell the words apart. The *Environmental Engineering Dictionary and Directory* gives you a complete list of brand terms, brand names, and trademarks - right at your fingertips.

Youth courts, also known as teen courts & peer courts, are one of the fastest growing programs in the community justice movement. This Guide will equip juvenile justice agencies with baseline info. that will aid them in developing, implementing, & enhancing teen courts programs. Chapters: overview; organizing the community; legal issues; developing a program purpose, goals, & objectives; determining a target population & designing a referral process; designing program services; developing a program model & procedures; recruiting, using, & training volunteers; examining human & financial resource issues; & program evaluation.

*Drug Discovery in Cancer Epigenetics is a practical resource for scientists involved in the discovery, testing, and development of epigenetic cancer drugs. Epigenetic modifications can have significant implications for translational science as biomarkers for diagnosis, prognosis or therapy prediction. Most importantly, epigenetic modifications are reversible and epigenetic players are found mutated in different cancers; therefore, they provide attractive therapeutic targets. There has been great interest in developing and testing epigenetic drugs, which inhibit DNA methyltransferases, histone modifying enzymes or chromatin reader proteins. The first few drugs are already FDA approved and have made their way into clinical settings. This book provides a comprehensive summary of the epigenetic drugs currently available and aims to increase awareness in this area to foster more rapid translation of epigenetic drugs into the clinic. *This book presents multiple new and classical methods for studying the vital poly-ADP-ribose (pADPr) pathway. Beginning with techniques for the detection and quantification of the product of poly(ADP-ribose) polymerase (PARP) enzymatic activity and detection of variation in pADPr production during the cell cycle, the volume continues with sections on the identification of pADPr protein acceptors, methods focusing on studying molecular mechanisms of PARP functions in eukaryotic cells, particularly those involved in control of DNA repair and oxidative stress, as well as in expression regulation, approaches to the in vitro reconstitution of PARP-1 interaction with chromatin, the development and testing of small molecule PARP inhibitors, and the functions of understudied members of PARP family. Written for the highly successful Methods in Molecular Biology series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and practical, Poly(ADP-Ribose) Polymerase: Methods and Protocols, Second Edition serves as an ideal companion to the first edition for scientists whose investigations involve this important pathway. The chapter 'Identifying and Validating Tankyrase Binders and Substrates: A Candidate Approach' is published open access under a CC BY 4.0 license.*
