nontechnical introduction to the most complex multivariate statistics presented in empirical research articles.

"www.StatsInResearch.com, " is a companion website that provides free sample chapters, exercises, and PowerPoint slides for students and teachers. A free 600-item test bank is available to instructors.

"Advanced Statistics in Research" does not show how to "perform" statistical procedures--it shows how to read, understand, and interpret them, as they are typically presented in journal

articles and research reports. It demystifies the sophisticated statistics that stop most readers cold: multiple regression, logistic regression, discriminant analysis, ANOVA, ANCOVA, MANOVA, factor analysis, path analysis, structural equation modeling, meta-analysis--and more. "Advanced Statistics in Research" assumes that you have never had a course in statistics. It begins at the beginning, with research design, central tendency, variability, z scores, and the normal curve. You will learn (or

Matrix algebra is avoided, and complex topics are explained using simple, easy-to-understand examples. "Need help writing up your results?" Advanced Statistics in Research shows how data-analysis results can be summarized in text, tables, and figures according to APA format. You will see how to present the basics (e.g., means and

Recognizing that reporting standards can aid authors in the process of writing and evaluating manuscripts and editors and reviewers in the process of evaluating those manuscripts, the Publications and Communications (P&C) Board of the American Psychological Association (APA) invited two task forces of researchers to develop standards for reporting quantitative and qualitative research in journal articles. It permits the space to expand on the ideas in those standards and to articulate the rationale behind each. It articulates decisions one may need to make as an author as one decides how to present their work. It also provides examples to illustrate a strong presentation style, and these can serve as helpful models. It provides the conceptual undergirding for

This paper provides, for the first time, a comprehensive analysis of the journal article output of Irish-based economists over a 30-year period. Using EconLit data, and supplementing where necessary, we provide details of the journals wherein Irish-based economists have published, provide details of the publishing histories of high volume publishers and discuss the evolving productivity profile of Irish-based

Bradford Skow presents an original defense of the 'block universe' theory of time, often said to be a theory according to which time does not pass. Along the way, he provides in-depth discussions of alternative theories of time, including those in which there is 'robust passage' of time or 'objective becoming': presentism, the moving spotlight theory of time,

the growing block theory of time, and the 'branching time' theory of time. Skow explains why the moving spotlight theory is the best of these arguments, and rebuts several popular arguments against the thesis that time passes. He surveys the problems that the special theory of relativity has been thought to raise for objective becoming, and suggests ways in which fans of objective becoming may reconcile their view with relativistic physics. The last third of the book aims to clarify and evaluate the argument that we should believe that time

passes because, somehow, the passage of time is given to us in experience. He isolates three separate arguments this idea suggests, and explains why they fail.

This book provides guidance to readers for how to conduct an integrative review. Over the decades, with the expansion of evidence-based practice (EBP), the evolution of methods used in reviews has resulted in a wide spectrum of review types. Due to the overlapping

characteristics of the various review methods, confusion exists related to terminology, descriptions and methods of each type. To fill this gap, this book examines components necessary to conduct a rigorous integrative review from formulating questions through dissemination of the results of the review. Each chapter focuses on one component or step in this process and is written in a straightforward and readable manner. An integrative review is considered by many as an actual research study, hence it should be approached following

established research methods involving well-defined steps. The integrative review is often compared with the systematic review. Both are used in healthcare research and follow a systematic process in reviewing literature and developing recommendations, but there are important differences that are addressed in the book. Evidence-based practice (EBP) demands high quality, rigorous evidence for nurse clinicians to make informed decisions with and for their patients. In nursing education, the integrative review is a frequent capstone project

for graduate students and forms the basis for many doctoral projects. The Integrative review process should be valid, reliable and transparent and this book provides clear guidelines for writing an integrative review for students, educators, clinicians, and researchers. This book is a useful addition to courses for both undergraduate and graduate level writers of integrative reviews. In academia, a likely adoption would be in graduate research and research methods courses, and baccalaureate honor courses.

The purpose of this study is to provide contributing authors with an understanding of the trends in article submission to the Acquisition Review Journal (ARJ) with regard to the types of research performed, research design, and data analysis. This research will provide future contributors with insight that will improve both the quality of the ARJ and future research for the Acquisition Corps. It will also provide guidance and recommendations for future research articles within the ARJ. This study analyzed and classified 233 articles that were published in the ARJ over the last 13 years (1994-2006). Content and statistical analyses were performed on the themes, research types, research

designs, and data analysis methods employed. Moreover, trends such as educational and institutional affiliations of contributing authors were also reviewed. The ARJ has shown some distinctive trends, which are reflected in its publication of a number of qualitative studies; however, it has also shown progress in the number of published quantitative studies. The academe and practitioners contributions remained steady, while civilian contributions have been rising. These trends are in line with current recommendations of the research community. For a relatively new journal, such trends are a good representation of a growing community.

The primary objective of this thesis was to apply an existing taxonomy to the complete library of a publication that is representative of contracting literature. Analysis of the results of this classification effort provided conclusive information about focal points and trends in the literature and the evolution of the contracting discipline. A secondary objective of this thesis was to evaluate the effectiveness and usefulness of the taxonomy used to

The study of the mind has always been one of

the main preoccupations of philosophers, and has been a booming area of research in recent decades, with remarkable advances in psychology and neuroscience. Oxford University Press now presents the most authoritative and comprehensive guide ever published to the philosophy of mind. An outstanding international team of contributors offer 45 specially written critical surveys of a wide range of topics relating to the mind. The first two sections cover the place of the mind in the natural world: its ontological status, how it fits into the causal fabric of the universe, and the nature of consciousness. The third section
