Aims & Scope Journal of Interdisciplinary Studies in Education is aimed at those in the academic world who are dedicated to advancing the field of education through their research. JISE provides a range of articles that speak to the major issues in education across all content areas and disciplines. The Journal is peer edited through a blind review process that utilizes a national and international editorial board and peer reviewers. JISE aspires to advance research in the field of education through a collection of quality, relevant, and advanced interdisciplinary articles in the field of education. The journal is listed/indexed with: ProQuest, EBSCOHost, and Cabell's Directory of Journals

Responding to the growing need for recruitment and retention of international talent in higher education institutions globally, this volume documents the experiences and contribution of international graduate students, researchers, and faculty. This text foregrounds perspectives around recruitment, transition, integration, professional development, and the retention of scholars originating from, or arriving in, countries including China, Australia, Iraq, Japan, and the US. By investigating the support systems that are in place to assist foreign-born faculty members in institutes of higher education, the text provides important insights for departments and institutions as they look to successfully attract and retain global academic talent. Moreover, the scientific and practical implications of the research presented in the text directly informs institutional policy, working towards more effective, inclusive, and equitable ways to support international faculty. This text will benefit researchers, academics, and educators with an interest in higher education, international and comparative education, and, more specifically, those involved with faculty development programs. The text will also support further discussion and reflection around multicultural education, international teaching and learning, and educational policy more broadly.

International Journal of Neutrosophic Science (IJNS) is a peer-review journal publishing high quality experimental and theoretical research in all areas of Neutrosophic and its Applications. Papers concern with neutrosophic logic and mathematical structures in the neutrosophic setting. Besides providing emphasis on topics like artificial intelligence, pattern recognition, image processing, robotics, decision making, data analysis, data mining, applications of neutrosophic mathematical theories contributions to economics, finance, management, industries, electronics, and communications are promoted.

International Journal of security and Security Studies (IJoSSS) presents National, Regional and International perspectives on Security, Human Security Strategy issues and studies from historical and reality assessments. By disseminating graduate research and all-purpose research work internationally, IJoSSS seeks to facilitate students, scholars and professional acquisition of knowledge from alternative viewpoints allowing them to further develop critical thinking, problem-solving and global competencies required to lead in a complex world. Digitalization of Higher Education using Cloud Computing: Implications, Risk, and Challenges provides an insight into the latest technology and tools being used to explore learning in Higher Educational Institutions (HEIs). Cloud computing, being an up-and-coming technology, integrates with academia and industry, thereby enhancing the quality of education. The opportunities and challenges faced by HEIs in recent times due to technological disruptions have forced both academia and industry to realign their strategies for survival and growth. With the acceleration of cloud computing in higher education, it has now become imperative for educators to constantly upskill and reskill in order to meet the requirements of the future of work, particularly in the digital age. Technological advancement is an unstoppable wave and the lack of relevant skills to handle the disruptions in higher education will become a huge challenge if not addressed promptly. This is the new phase of Education 4.0 where HEIs are aligning themselves using cloud computing implications, and thus are preparing both faculties and students to embrace the changes happening in the teaching and learning processes. This book focuses on multi-faceted strategies to be adopted by HEIs to deal with the emerging issues related to teaching-learning processes using cloud computing, technological interventions, curriculum overhaul, experiential learning, multi-disciplinary approaches, and continuous innovations and digitalization. The book offers comprehensive coverage of many academic areas, with the most essential topics including:

- Pedagogies in digital education using a cloud environment
- Risks and challenges in cloud platforms for teaching and learning
- Collaborative and group learning in a cloud environment
- Enhancing quality of education using e-learning methodologies

The sections in this book are "Cloud Enabled Digitalization of Higher Education" and "Innovations and Applications of Digitalization of Higher Education: A Cloud Perspective". The book will be useful for undergraduates, graduates, academicians, scholars, and policy makers. It will help readers acquire skills for a smooth transition from face-to-face teaching to cloud-based teaching.

This book explores emerging populations of mobile international students in order to consider innovative and inclusive approaches for a more equitable and socially just higher education for new generations of international students. It offers critical reflections on the intersections of race, place, and space at universities hosting international students across multiple geographic and cultural contexts. The volume is designed to catalyze debate on how international student learning and exchange needs to be reimagined for new generations of students in a world of increasing complexity and virtual mobility. International student mobility in higher education is intended to serve as an educational experience that speaks to the need for more interculturally sensitive and globally competent learners. However, internationalization practices like study abroad have increasingly been influenced by neoliberalism, and dynamics of commodification and consumerism, emphasizing the private benefits of such experiences in terms of the social and economic benefits to individual participants. This raises the question of inequality in such internationalization practices; who is benefitting from it? As post-secondary institutions around the world become more and more internationalized, what are the undesirable effects of these developments? Given the rapid expansion of research on both internationalization and inequality in higher education, it is foreseeable that this book will become a much-referenced text within the field and profession.

The world's population is growing rapidly and consequently, there is an increasing demand for high-quality and safe food. At the same time, agricultural areas are diminishing due to industrialization, among other factors. Therefore, the efficiency of animal production needs to be improved. This book examines animal nutrition and ways to improve it. Topics covered include the use of feed additives in poultry nutrition, silage in dairy cattle nutrition, plant-origin feed additives in water buffalo nutrition, microbial inoculation in dairy cow nutrition, and more.

Glycopeptide Antibiotics—Advances in Research and Application: 2012 Edition

This volume presents advanced techniques to modeling markets, with a wide spectrum of topics, including advanced individual demand models, time series analysis, state space models, spatial models, structural models, mediation, models that specify competition and diffusion models. It is intended as a follow-on and companion to Modeling Markets (2015), in which the authors presented the basics of modeling markets along the classical steps of the model building process: specification, data collection, estimation, validation and implementation. This volume builds on the concepts presented in Modeling Markets with an emphasis on advanced methods that are used to specify, estimate and validate marketing models, including structural equation models, partial least squares, mixture models, and hidden Markov models, as well as generalized methods of moments, Bayesian analysis, non/semi-parametric estimation and endogeneity issues. Specific attention is given to big data. The market environment is changing rapidly and constantly. Models that provide information about the sensitivity of market behavior to marketing activities such as advertising, pricing, promotions and distribution are now routinely used by managers for the identification of changes in marketing programs that can improve brand performance. In today's environment of information overload, the challenge is to make sense of the data that is being provided globally, in real time, from thousands of sources. Although marketing models are now widely accepted, the quality of the marketing decisions is critically dependent upon the quality of the models on which those decisions are based. This volume provides an authoritative and comprehensive review, with each chapter including:

- an introduction to the method/methodology
- a numerical example/application in marketing
- references to other marketing applications
- suggestions about software.

Featuring contributions from top authors in the field, this volume will explore current and future aspects of modeling markets, providing relevant and timely research and techniques to scientists, researchers, students, academics and practitioners in marketing, management and economics.

With contributions from some of the top academics and scientists in the field, Advanced Studies in Multi-Criteria Decision Making presents an updated view of the landscape of Decision Sciences, current research topics, the interaction with other sciences and fields, as well as the prospects and challenges at an international level. Given that Decision Sciences are recognized today as indispensable for confronting the major societal challenges in science and technology, this book would be of interest to decision-makers, managers, and researchers from academia, and industrial/services companies that would like a fresh insight into MCDM. Features Integrates a wide range of scientific fields with a general reader approach, including applied researchers from the social, business, enterprise sciences Suitable for academics and professionals Presents a broad coverage of MCDM tools either in industry or in services companies and systems Provides a fresh overview on MCDM studies promoted by prestigious R&D institutions

This book explains how learning from past mistakes in urban design can help to enhance sustainable cities and how the principles of Green Urbanism can yield more resilient urban settlements. Environmental design is a fundamental principle in shaping cities. However, environmental challenges like increased resource consumption, water degradation and waste-related issues are among the greatest problems now facing humanity | which is why these issues need to be considered with regard to |smart cities,| either for the development of new urban centers or for the transformation of existing cities. The book not only discusses the importance of integrating sustainability principles in the urban design process, but also demonstrates their application to the development of sustainable cities. As such, the book offers essential information and a source of inspiration for all those who want to build more sustainable cities.

The Yearbook of the Maimonides Centre for Advanced Studies mirrors the annual activities of staff and visiting fellows of the Centre as well as scholars of the Institute for Jewish Philosophy and Religion at the University of Hamburg and reports on symposia, workshops, and lectures. Although aimed at a wider audience, the yearbook also contains academic articles and book reviews on scepticism in Judaism and scepticism in general. The Yearbook 2016 was published as volume 1 in the series Jewish Thought, Philosophy, and Religion. From 2017 onwards, the Yearbook is published as a separate series. Further book series of the Maimonides Centre for Advanced Studies are Studies and Texts in Scepticism and Jewish Thought, Philosophy, and Religion.

This book offers a critical perspective from which to observe evolution of the Euro Area and the European Union in these times of growing economic and political conflict.

The world of education is experiencing a time of unprecedented change. In our modern, Covid-racked world, educational institutions and their respective delivery methodologies have been forcibly and forever transformed.

Most educators realize that these transformations are likely permanent and that procedures and systems of the past will no longer be relevant for the emerging post-Covid educational environment. The future provides countless challenges and great opportunities. Those embracing the transformation will be poised to usher in a new age of educational achievement. They will certainly unleash new educational methodologies, techniques, and strategies. These institutions and educators will chart tomorrow's pathway.

This volume, written by his friends, collaborators and students, is offered to the memory of Paul Turan. Most of the papers they contributed discuss subjects related to his own fields of research. The wide range of topics reflects the versatility of his mathematical activity. His work has inspired many mathematicians in analytic number theory, theory of functions of a complex variable, interpolation and approximation theory, numerical algebra, differential equations, statistical group theory and theory of graphs. Beyond the influence of his deep and important results he had the exceptional ability to communicate to others his enthusiasm for mathematics. One of the strengths of Turan was to ask unusual questions that became starting points of many further results, sometimes opening up new fields of research. We hope that this volume will illustrate this aspect of his work adequately. Born in Budapest, on August 28, 1910, Paul Turan obtained his Ph. D. under L. Fejer in 1935. His love for mathematics enabled him to work even under inhuman circumstances during the darkest years of the Second World War. One of his major achievements, his power sum method originated in this period. After the war he was visiting professor in Denmark and in Princeton. In 1949 he became professor at the Eotvos Lorand University of Budapest, a member of the Hungarian Academy of Sciences and a leading figure of the Hungarian mathematical community.

This Journal commits to working for quality and transparency in its publishing by following standard Publication Ethics and Policies.

The comprehension, retention and production of idiomatic expressions is one of the most difficult areas of the lexicon for second language (L2) learners, even very advanced students, to master. This book investigates this under-researched and interesting aspect of language acquisition, shedding light on both conventional uses of idiomatic expressions as well as creative variant forms. The chapters in the book delve into different aspects of idiomatic mastery: students' comprehension of canonically used idioms in both their first and second language; the effects of multimedia and visualization techniques on learners' comprehension and retention of L2 idioms; students' misinterpretations of L2 idioms; L2 learners' comprehension of creative idiom variants and their use of idioms in free composition writing.

Student retention has become a difficult issue within higher education. As such, it is imperative to examine the causes, as well as provide educators with strategies to implement to improve retention rates. Critical Assessment and Strategies for Increased Student Retention is a pivotal reference source for the latest progressive research on a variety of current student success and attendance perpetuation issues. Featuring a broad range of coverage on a number of perspectives and topics, such as academic performance, counseling, and culture, this publication is geared towards practitioners, academicians, and researchers interested in understanding the difficulties with maintaining student retention. Cutting edge reflections on biblical text formation Empirical models based on ancient Near Eastern literature and variations between different textual traditions have been used to lend credibility to the identification of the sources behind biblical literature and

the different editorial layers. In this volume, empirical models are used to critique the exaggerated results of identifying sources and editorial layers by demonstrating that, even though much of ancient literature had such complex literary histories, our methods are often inadequate for the task of precisely identifying sources and editorial layers. The contributors are Maxine L. Grossman, Bénédicte Lemmelijn, Alan Lenzi, Sara J. Milstein, Raymond F. Person Jr., Robert Rezetko, Stefan Schorch, Julio Treballe Barrera, Ian Young, and Joseph A. Weeks. Features: Evidence that many ancient texts are composite texts with complex literary histories Ten essays and an introduction cover texts from Mesopotamia, the Hebrew Bible, the New Testament, and the Dead Sea Scrolls

This new fifth edition of Information Resources in Toxicology offers a consolidated entry portal for the study, research, and practice of toxicology. Both volumes represents a unique, wide-ranging, curated, international, annotated bibliography, and directory of major resources in toxicology and allied fields such as environmental and occupational health, chemical safety, and risk assessment. The editors and authors are among the leaders of the profession sharing their cumulative wisdom in toxicology's subdisciplines. This edition keeps pace with the digital world in directing and linking readers to relevant websites and other online tools. Due to the increasing size of the hardcopy publication, the current edition has been divided into two volumes to make it easier to handle and consult. Volume 1: Background, Resources, and Tools, arranged in 5 parts, begins with chapters on the science of toxicology, its history, and informatics framework in Part 1. Part 2 continues with chapters organized by more specific subject such as cancer, clinical toxicology, genetic toxicology, etc. The categorization of chapters by resource format, for example, journals and newsletters, technical reports, organizations constitutes Part 3. Part 4 further considers toxicology's presence via the Internet, databases, and software tools. Among the miscellaneous topics in the concluding Part 5 are laws and regulations, professional education, grants and funding, and patents. Volume 2: The Global Arena offers contributed chapters focusing on the toxicology contributions of over 40 countries, followed by a glossary of toxicological terms and an appendix of popular quotations related to the field. The book, offered in both print and electronic formats, is carefully structured, indexed, and cross-referenced to enable users to easily find answers to their questions or serendipitously locate useful knowledge they were not originally aware they needed. Among the many timely topics receiving increased emphasis are disaster preparedness, nanotechnology, -omics, risk assessment, societal implications such as ethics and the precautionary principle, climate change, and children's environmental health. Introductory chapters provide a backdrop to the science of toxicology, its history, the origin and status of toxicoinformatics, and starting points for identifying resources. Offers an extensive array of chapters organized by subject, each highlighting resources such as journals, databases, organizations, and review articles. Includes chapters with an emphasis on format such as government reports, general interest publications, blogs, and audiovisuals. Explores recent internet trends, web-based databases, and software tools in a section on the online environment. Concludes with a miscellany of special topics such as laws and regulations, chemical hazard communication resources, careers and professional education, K-12 resources, funding, poison control centers, and patents. Paired with Volume Two, which focuses on global resources, this set offers the most comprehensive compendium of print, digital, and organizational resources in the toxicological sciences with over 120 chapters contributions by experts and leaders in the field.
