The saturation of design complexity and clock frequencies for single-core processors has resulted in the emergence of multicore architectures as an alternative design paradigm. Nowadays, multicore/multithreaded computing systems are not only a de-facto standard for high-end applications, they are also gaining popularity in the field of embedded computing. The start of the multicore era has altered the concepts relating to almost all of the areas of computer architecture design, including core design, memory management, thread scheduling, application support, inter-processor communication, debugging, and power management. This book gives readers a holistic overview of the field and guides them to further avenues of research by covering the state of the art in this area. It includes contributions from industry as well as academia.

This report sets out the main findings and recommendations of the 6th session of the UN Committee for Development Policy, held in New York in March 2004. The report focuses on three issues: resources mobilisation and measures to promote an enabling environment for poverty eradication in relation to the implementation of the Programme of Action for the Least Developed Countries for the decade 2001-2010; how to evaluate progress towards good governance in the context of the Millennium Development Goals; and matters related to the Committee's triennial review of the list of least developed countries.
