

Kingsland 75 S Hydraulic

Outlining the early history of the U.S. paper industry, this book provides details on paper manufacturing from the early 1800s, when American paper was created almost entirely by hand out of cotton and other plant fibers, to the discovery of wood-pulp paper and the introduction of commercial-grade paper machines during the post-Civil War period. It discusses paper machine manufacturing, major U.S. mills, the papermaking traditions of Dutch and German immigrants, the politics of papermaking, and the eventual expansion of the paper industry from New England to the forests of the Northeast, Midwest, and Northwest. Two appendices provide a census listing of more than 1,100 U.S. paper mills, along with a directory of more than 1,300 mill owners and companies. The book contains around 70 illustrations and diagrams of major mills and relevant manufacturing technologies.

Lloyd's Register of Shipping

In 2001, Kenneth Deffeyes made a grim prediction: world oil production would reach a peak within the next decade--and there was nothing anyone could do to stop it.

Deffeyes's claim echoed the work of geophysicist M. King Hubbert, who in 1956 predicted that U.S. oil production would reach its highest level in the early 1970s.

Though roundly criticized by oil experts and economists, Hubbert's prediction came true in 1970. In this updated edition of Hubbert's Peak, Deffeyes explains the crisis that few now deny we are headed toward. Using geology and economics, he shows how everything from the rising price of groceries to the subprime mortgage crisis has been exacerbated by the shrinking supply--and growing price--of oil. Although there is no easy solution to these problems, Deffeyes argues that the first step is understanding the trouble that we are in.

The Builder

The Surveyor & Municipal & County Engineer

An "eye-opening, sometimes alarming, and ultimately inspiring" natural history of rivers and their complex and ancient relationship with human civilization (Elizabeth Kolbert, Pulitzer Prize-winning author of *The Sixth Extinction*). Rivers, more than any road, technology, or political leader, have shaped the course of human civilization. They have opened frontiers, founded cities, settled borders, and fed billions. They promote life, forge peace, grant power, and can capriciously destroy everything in their path. Even today, rivers remain a powerful global force -- one that is more critical than ever to our future. In *Rivers of Power*, geographer Laurence C. Smith explores the timeless yet underappreciated relationship between rivers and civilization as we know it. Rivers are of course important in many practical ways (water supply, transportation, sanitation, etc). But the full breadth of their influence on the way we live is less obvious. Rivers define and transcend international borders, forcing cooperation between nations. Huge volumes of river water are used to produce energy, raw commodities, and food. Wars, politics, and demography are

transformed by their devastating floods. The territorial claims of nations, their cultural and economic ties to each other, and the migrations and histories of their peoples trace back to rivers, river valleys, and the topographic divides they carve upon the world. And as climate change, technology, and cities transform our relationship with nature, new opportunities are arising to protect the waters that sustain us. Beautifully told and expansive in scope, Rivers of Power reveals how and why rivers have so profoundly influenced our civilization and examines the importance this vast, arterial power holds for the future of humanity. "As fascinating as it is beautifully written."---Jared Diamond, Pulitzer Prize-winning author of Guns, Germs, and Steel, Collapse, and Upheaval

Rag Paper Manufacture in the United States, 1801-1900

Extensively illustrated and easy to use, this practical resource offers clear guidelines and step-by-step sequences for moving and working with individuals with differing levels of paralysis. It serves as both an ideal student textbook and a valuable clinical manual for therapists who see tetraplegic and paraplegic patients. Clear, practical, concise chapters present important information in an easily understandable approach. Spiral-bound format enables the book to lay flat for easy reference in the clinical setting or classroom.

Excellent coverage of wheelchairs and wheelchair management is included. All illustrations have been redrawn for increased clarity, to enhance the clinical usefulness of this resource. Audit and evidence-based practice is incorporated throughout. Discussion of patient empowerment is included. The chapter on hands has been expanded to provide more in-depth coverage of this important topic. New discussion of levers has been added to this edition. New chapter on aging offers insight and considerations for treating aging and elderly patients with spinal cord injury. Expanded section on equipment provides details on current and state-of-the-art equipment

used in practice.
