Family Politics and National Anxiety in the European Novel

*Latinos across the United States are redefining identities, pushing boundaries, and awakening politically in powerful and surprising ways. Many—Afrolatino, indigenous, Muslim, queer and undocumented, living in large cities and small towns—are voices who have been chronically overlooked in how the diverse population of almost sixty million Latinos in the U.S. has been represented. No longer. In this empowering cross-country travelogue, journalist and activist Paola Ramos embarks on a journey to find the communities of people defining the controversial term, “Latinx.” She introduces us to the indigenous Oaxacans who rebuilt the main street in a post-industrial town in upstate New York, the “Las Poderosas” who fight for reproductive rights in Texas, the musicians in Milwaukee whose beats reassure others of their belonging, as well as drag queens, environmental activists, farmworkers, and the migrants detained at our border. Drawing on intensive field research as well as her own personal story, Ramos chronicles how “Latinx” has given rise to a sense of collectivity and solidarity among Latinos unseen in this country for decades. A vital and inspiring work of reportage, Finding Latinx calls on all of us to expand our understanding of what it means to be Latino and what it means to be American. The first step towards change, writes Ramos, is for us to recognize who we are.*

*Are current testing practices consistent with the goals of the reform movement in school mathematics? If not, what are the alternatives? How can authentic performance in mathematics be assessed? These and similar questions about tests and their uses have forced those advocating change to examine the way in which mathematical performance data is gathered and used in American schools. This book provides recent views on the issues surrounding mathematics tests, such as the need for valid performance data, the implications of the Curriculum and Evaluation Standards for School Mathematics for test development, the identification of valid items and tests in terms of the Standards, the procedures now being used to construct a sample of state assessment tests, gender differences in test taking, and methods of reporting student achievement.*

*The Common European Framework of Reference for Languages (CEFR) has become the yardstick for teaching and testing language skills in Europe and elsewhere. Yet little is known about the relationships between the communicative levels established using the can-do statements of the CEFR and the developmental stages of grammatical and lexical development described by Second Language Acquisition (SLA) research. This book presents empirical research by members of the SLATE network (Second Language Acquisition and Testing in Europe), aimed at bridging this gap. The studies deal with several target languages, including Dutch, English, Finnish, French, Italian, Norwegian and Spanish, with adult, adolescent and child learners in both formal and informal contexts.*

An Anthropology of Forgetting, Repair and Urban Traces

*What happens to legacies that do not find any continuation? In Estonia, a new generation that does not remember the socialist era and is open to global influences has grown up. As a result, the impact of the Soviet memory in*

people's conventional values is losing its effective power, opening new opportunities for repair and revaluation of the past. Francisco Martinez brings together a number of sites of interest to explore the vanquishing of the Soviet legacy in Estonia: the railway bazaar in Tallinn where concepts such as 'market' and 'employment' take on distinctly different meanings from their Western use; Linnahall, a grandiose venue, whose Soviet heritage now poses difficult questions of how to present the building's history; Tallinn's cityscape, where the social, spatial and temporal co-evolution of the city can be viewed and debated; Narva, a city that marks the border between the Russian Federation, NATO and the European Union, and represents a place of continual negotiation of belonging; and the new Estonian National Museum in Raadi, an area on the outskirts of Tartu, that has been turned into a memory field. The anthropological study of all these places shows that national identity and historical representations can be constructed in relation to waste and disrepair too, also demonstrating how we can understand generational change in a material sense. Praise for *Remains of the Soviet Past in Estonia* 'By adopting the tropes of 'repair' and 'waste', this book innovatively manages to link various material registers from architecture, intergenerational relations, affect and museums with ways of making the past present. Through a rigorous yet transdisciplinary method, Martínez brings together different scales and contexts that would often be segregated out. In this respect, the ethnography unfolds a deep and nuanced analysis, providing a useful comparative and insightful account of the processes of repair and waste making in all their material, social and ontological dimensions.' Victor Buchli, Professor of Material Culture at UCL 'This book comprises an endearingly transdisciplinary ethnography of postsocialist material culture and social change in Estonia. Martínez creatively draws on a number of critical and cultural theorists, together with additional research on memory and political studies scholarship and the classics of anthropology. Grappling concurrently with time and space, the book offers a delightfully thick description of the material effects generated by the accelerated post-Soviet transformation in Estonia, inquiring into the generational specificities in experiencing and relating to the postsocialist condition through the conceptual anchors of wasted legacies and repair. This book defies disciplinary boundaries and shows how an attention to material relations and affective infrastructures might reinvigorate political theory.' Maria Mäiksoo, Senior Lecturer, Brussels School of International Studies at the University of Kent

The series *Beihefte zur Zeitschrift für die alttestamentliche Wissenschaft* (BZAW) covers all areas of research into the Old Testament, focusing on the Hebrew Bible, its early and later forms in Ancient Judaism, as well as its branching into many neighboring cultures of the Ancient Near East and the Greco-Roman world.

*Amstat News* asked three review editors to rate their top five favorite books in the September 2003 issue. *Methods of Multivariate Analysis* was among those chosen. When measuring several variables on a complex experimental unit, it is often necessary to analyze the variables simultaneously, rather than isolate them and consider them individually. Multivariate analysis enables researchers to explore the joint performance of such variables and to determine the effect of each variable in the presence of the others. The Second Edition of Alvin Rencher's *Methods of Multivariate Analysis* provides students of all statistical backgrounds with both the fundamental and more sophisticated skills necessary to master the discipline. To illustrate multivariate applications, the author provides examples and exercises based on fifty-nine real data sets from a wide variety of scientific fields. Rencher takes a "methods" approach to his subject, with an emphasis on how students and practitioners can employ multivariate analysis in real-life situations. The Second Edition contains revised and updated chapters from the critically acclaimed First Edition as well as brand-new chapters on: Cluster analysis, Multidimensional scaling, Correspondence analysis, Biplots. Each chapter contains exercises, with corresponding answers and hints in the appendix, providing students the opportunity to test and extend their understanding of the subject. *Methods of Multivariate Analysis* provides an authoritative reference for statistics students as well as for practicing scientists and clinicians.

*In Adulterous Nations, Tatiana Kuzmic enlarges our perspective on the nineteenth-century novel of adultery, showing how it often served as a metaphor for relationships between the imperialistic and the colonized. In the context of the long-standing practice of gendering nations as female, the novels under discussion here—George Eliot's Middlemarch, Theodor Fontane's Effi Briest, and Leo Tolstoy's Anna Karenina, along with August Šenoa's The Goldsmith's Gold and Henryk Sienkiewicz's Quo Vadis—can be understood as depicting international crises on the scale of the nuclear family. In each example, an outsider figure is responsible for the disruption experienced by the family. Kuzmic deftly argues that the hopes, anxieties, and interests of European nations during this period can be discerned in the destabilizing force of adultery. Reading the work of Šenoa and Sienkiewicz, from Croatia and Poland, respectively, Kuzmic illuminates the relationship between the literature of dominant nations and that of the semicolonized territories that posed a threat to them. Ultimately, Kuzmic's study enhances our understanding of not only these five novels but nineteenth-century European literature more generally.*

Scott Warden is a man haunted by the past—and soon to be haunted by the future. In early-twenty-first-century Thailand, Scott is an expatriate slacker. Then, one day, he inadvertently witnesses an impossible event: the violent appearance of a 200-foot stone pillar in the forested interior. Its arrival collapses trees for a quarter mile around its base, freezing ice out of the air and emitting a burst of ionizing radiation. It appears to be composed of an exotic form of matter. And the inscription chiseled into it commemorates a military victory—sixteen years in the future. Shortly afterwards, another, larger pillar arrives in the center of Bangkok—obliterating the city and killing thousands. Over the next several years, human society is transformed by these mysterious arrivals from, seemingly, our own near future. Who is the warlord "Kuין" whose victories they note? Scott wants only to rebuild his life. But some strange loop of causality keeps drawing him in, to the central mystery and a final battle with the future. *The Chronoliths* by Robert Charles Wilson is a 2002 Hugo Award Nominee for Best Novel and the winner of the 2002 John W. **Get more practice with the essential medical assisting job skills! Designed to support Kinn's The Medical Assistant: An Applied Learning Approach, 13th Edition, Kinn's The Medical Assistant - Study Guide and Procedure Checklist Manual Package: An Applied Learning Approach, 13th Edition** offers a wide range of exercises to reinforce your understanding of common administrative and clinical skills — including CAAHEP and ABHES competencies. A variety of exercises test your knowledge and critical thinking skills with vocabulary review, multiple choice, fill in the blank, and true/false questions. Additional exercises enhance learning with skills and concepts, word puzzles, case studies, workplace applications, and Internet activities. Procedure checklists help you track your performance of every procedure included in the textbook. Work products allow you to provide documentation to instructors and to accrediting organizations when a competency has been mastered. Cross-references tie together exercises in the study guide to the Connections theme in the main text. NEW! 15 procedure checklists based on CAAHEP competencies provide an assessment tool for MA procedures. NEW! Glucometer test results and Mantoux test records allow you to assess how well you're able to perform these procedures. NEW! Coverage of ICD-10 prepares you to use this new code set. NEW! SimChart for the Medical Office Connection ties EHR cases to appropriate chapters.
