In this book, Lynne Kelly explores the role of formal knowledge systems in small-scale oral cultures in both historic and archaeological contexts. In the first part, she examines knowledge systems within historically recorded oral cultures, showing how the link between power and the control of knowledge is established. Analyzing the material mnemonic devices used by documented oral cultures, she demonstrates how early societies maintained a vast corpus of pragmatic information concerning animal behavior, plant properties, navigation, astronomy, genealogies, laws and trade agreements, among other matters. In the second part Kelly turns to the archaeological record of three sites, Chaco Canyon, Poverty Point and Stonehenge, offering new insights into the purpose of the monuments and associated decorated objects. This book demonstrates how an understanding of rational intellect, pragmatic knowledge and mnemonic technologies in prehistoric societies offers a new tool for analysis of monumental structures built by non-literate cultures.

"China's rise to power has become one of the most discussed questions in both International Relations Theory (IRT) and Foreign Policy circles. Although power has been a core concept of IRT for a long time, the faces and mechanisms of power as it relates to Chinese foreign policy making has reinvigorated and changed the contours of that debate. With the rise of China and other powers across the global political arena comes a new visibility for different kinds of encounters between states, particularly between China and other Global South states. These encounters are made more visible to IR scholars now because of the increasing influence and impact that rising powers are making in the international system. This book shows foreign policy encounters between rising powers and Global South states do not necessarily exhibit the same logics, behaviors, or investment strategies of Euro-American hegemons. Instead, they have distinctive features that require new theoretical frameworks for their analysis. Shaping the Future of Power probes the type of power mechanisms that build, diffuse, and project China's power in Africa. It is necessary to take into account the processes of knowledge production, social capital formation, and skills transfers in Chinese foreign policy toward African states to fully understand China's power building mechanisms. These elements are crucial for the relational power framework to capture both the material aspects and ideational people-centered aspects to power. By examining China's investments in human resource development programs for Africa, the book examines a vital, yet undertheorized, aspect of China's foreign policy making"-- This book presents an academically rigorous yet practical guide to efforts to understand how knowledge, policy and power interact to promote or prevent change. It offers a power analysis perspective on the knowledge-policy process, illustrated with rich empirical examples from the field of international development, combined with practical guidance on the implications of such an approach. It provides ways to identify and address problems that have hampered previous attempts to improve the space between knowledge and policy; such as difficulties in analysing political context, persistent asymmetric relationships between actors, ignorance of the contributions of different types of knowledge, and misconceptions of the roles played by intermediary organisations. Most importantly, the book gives readers the ability to develop strategies for negotiating the complexity of the knowledge-policy interface more effectively, so as to contribute to policy dialogues, influence policy change, and implement policies and programmes more effectively. The authors focus on the dynamics of the knowledge-policy interface in international development; offering novel theoretical insights and methodological approaches that are applicable to a broader array of policy arenas and their audiences, including academics, practitioners and students.

An instant New York Times bestseller and #1 Wall Street Journal bestseller. JIM KWIK, the world ' s #1 brain coach, has written the owner ' s manual for mental expansion and brain fitness. Limitless gives people the ability to accomplish more--more productivity, more transformation, more personal success and business achievement--by changing their Mindset, Motivation, and Methods. These " 3 M ' s " live in the pages of Limitless along with practical techniques that unlock the superpowers of your brain and change your habits. For over 25 years, Jim Kwik has worked closely with successful men and women who are at the top in their fields as actors, athletes, CEOs, and business leaders from all walks of life to unlock their true potential. In this groundbreaking book, he reveals the science-based practices and field-tested tips to accelerate self learning, communication, memory, focus, recall, and speed reading, to create fast, hard results. Learn how to: FLIP YOUR MINDSET Your brain is like a supercomputer and your thoughts program it to run. That ' s why the Kwik Brain process starts with unmasking assumptions, habits, and procrastinations that stifle you, redrawing the borders and boundaries of what you think is possible. It teaches you how to identify what you want in every aspect of your life, so you can move from negative thinking to positive possibilities. IGNITE YOUR MOTIVATION Uncovering what motivates you is the key that opens up limitless mental capacity. This is where Passion + Purpose + Energy meet to move you closer to your goals, while staying focused and clear. Your personal excitement will be sustainable with self-renewing inspirations. Your mind starts strong, stays strong, and drives further exponentially faster. MASTER THE METHOD We ' ve applied the latest neuroscience for accelerated learning. Our process, programs, podcasts, and products unleash your brain ' s own superpowers. Finish a book 3x faster through speed reading (and remember every part of it), learn a new language in record time, and master new skills with ease. Three Models of Change in International Organizations

From Knowledge to Power

Rising to Power

The Journey of Exceptional Executives

Do governments seeking to collaborate in such international organizations as the United Nations and the World Bank ever learn to improve the performance of those organizations? Can international organizations be improved by a deliberate institutional design that reflects lessons learned in peacekeeping, the protection of human rights, and environmentally sound economic development? In this incisive work, Ernst Haas examines these and other issues to delineate the conditions under which organizations change their methods for defining problems. Haas contends that international organizations change most effectively when they are able to redefine the causes underlying the problems to be addressed. He shows that such self-reflection is possible when the expert-generated knowledge about the problems can be made to mesh with the interests of hegemonic coalitions of member governments. But usually efforts to change organizations begin as adaptive practices that owe little to a systematic questioning of past behavior. Often organizations adapt and survive without fully satisfying most of their members, as has been the case with the United Nations since 1970. When Knowledge Is Power is a wide-ranging work that will elicit interest from political scientists, organization theorists, bureaucrats, and students of management and international administration. This title is part of UC Press's Voices Revived program, which commemorates University of California Press ' s mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, Voices Revived makes high-quality, peer-reviewed scholarship accessible once again using print-on-demand technology. This title was originally published in 1990.

Advancing a three-fold political agenda, this volume: \* illuminates how the meanings assigned to a whole vocabulary of words and phrases frequently used to discuss the role and reform of U.S. public schools reflect an essentially economic view of the world; \* contends that education or educational reform conducted under an economized worldview will only intensify the effects of the colonial relations of political and economic domination that it breeds at home and abroad; and \* offers a set of alternative concepts and meanings for reformulating the role of U.S. public schools and for considering the implications of such a reformulation more generally for the underlying premises of all human relationships and activities. Toward these ends, the authors, in Part I, critically examine many of the most commonly used terms within the rhetoric of educational reform since the early 1980s and before. Part II links today's economized worldview to curricular and instructional issues. These essays are especially important for comprehending how the organization of school curriculum privileges those disciplines deemed most central to market expansion--math and science--and how the political centrality of the economic sphere influences the nature of the knowledge presented in specific content areas. Given that language constrains as well as advances human thought, the twin tasks of de-economizing education and decolonizing society will require a vocabulary that transcends the familiar terminologies addressed in Parts I and II. The entries in Part III cultivate the beginnings of such a vocabulary as the authors elucidate innovative concepts which they view as central to the creation of truly alternative educational visions and practices.

Ronald Reagan ' s most-quoted living author—George Gilder—is back with an all-new paradigm-shifting theory of capitalism that will upturn conventional wisdom, just when our economy desperately needs a new direction. America ' s struggling economy needs a better philosophy than the college student's lament: "I can't be out of money, I still have checks in my checkbook!" We ' ve tried a government spending spree, and we ' ve learned it doesn ' t work. Now is the time to rededicate our country to the pursuit of free market capitalism, before we ' re buried under a mound of debt and unfunded entitlements. But how do we navigate between government spending that's too big to sustain and financial institutions that are "too big to fail?" In Knowledge and Power, George Gilder proposes a bold new theory on how capitalism produces wealth and how our economy can regain its vitality and its growth. Gilder breaks away from the supply-side model of economics to present a new economic paradigm: the epic conflict between the knowledge of entrepreneurs on one side, and the blunt power of government on the other. The knowledge of entrepreneurs, and their freedom to share and use that knowledge, are the sparks that light up the economy and set its gears in motion. The power of government to regulate, stifle, manipulate, subsidize or suppress knowledge and ideas is the inertia that slows those gears down, or keeps them from turning at all. One of the twentieth century ' s defining economic minds has returned with a new philosophy to carry us into the twenty-first. Knowledge and Power is a must-read for fiscal conservatives, business owners, CEOs, investors, and anyone interested in propelling America ' s economy to future success.

'Pan has produced a book which not only challenges some basic assumptions about the nature of China's "rise", but more importantly forces us to rethink the very basic starting points of how we know what we know about China.' - Shaun Breslin, University of Warwick, UK

A Guide to Knowledge as Power

Power/Knowledge

Work Hard. Be Nice.

Interest in relations between knowledge, power, and space has a long tradition in a range of disciplines, but it was reinvigorated in the last two decades through critical engagement with Foucault and Gramsci. This volume focuses on relations between knowledge and power. It shows why space is fundamental in any exercise of power and explains which roles various types of knowledge play in the acquisition, support, and legitimization of power. Topics include the control and manipulation of knowledge through centers of power in historical contexts, the geopolitics of knowledge about world politics, media control in twentieth century, cartography in modern war, the power of words, the changing face of Islamic authority, and the role of Millennialism in the United States. This book offers insights from disciplines such as geography, anthropology, scientific theology, Assyriology, and communication science.

#1 New York Times Bestseller "THIS. This is the right book for right now. Yes, learning requires focus. But, unlearning and relearning requires much more—it requires choosing courage over comfort. In Think Again, Adam Grant weaves together research and storytelling to help us build the intellectual and emotional muscle we need to stay curious enough about the world to actually change it. I've never felt so hopeful about what I don't know." —Brené Brown, Ph.D., #1 New York Times bestselling author of Dare to Lead The bestselling author of Give and Take and Originals examines the critical art of rethinking: learning to question your opinions and open other people's minds, which can position you for excellence at work and wisdom in life Intelligence is usually seen as the ability to think and learn, but in a rapidly changing world, there's another set of cognitive skills that might matter more: the ability to rethink and unlearn. In our daily lives, too many of us favor the comfort of conviction over the discomfort of doubt. We listen to opinions that make us feel good, instead of ideas that make us think hard. We see disagreement as a threat to our egos, rather than an opportunity to learn. We surround ourselves with people who agree with our conclusions, when we should be gravitating toward those who challenge our thought process. The result is that our beliefs get brittle long before our bones. We think too much like preachers defending our sacred beliefs, prosecutors proving the other side wrong, and politicians campaigning for approval--and too little like scientists searching for truth. Intelligence is no cure, and it can even be a curse: being good at thinking can make us worse at rethinking. The brighter we are, the blinder to our own limitations we can become. Organizational psychologist Adam Grant is an expert on opening other people's minds--and our own. As Wharton's top-rated professor and the bestselling author of Originals and Give and Take, he makes it one of his guiding principles to argue like he's right but listen like he's wrong. With bold ideas and rigorous evidence, he investigates how we can embrace the joy of being wrong, bring nuance to charged conversations, and build schools, workplaces, and communities of lifelong learners. You'll learn how an international debate champion wins arguments, a Black musician persuades white supremacists to abandon hate, a vaccine whisperer convinces concerned parents to immunize their children, and Adam has coaxed Yankees fans to root for the Red Sox. Think Again reveals that we don't have to believe everything we think or internalize everything we feel. It's an invitation to let go of views that are no longer serving us well and prize mental flexibility over foolish consistency. If knowledge is power, knowing what we don't know is wisdom.

Post-Orientalism is a sustained record of Hamid Dabashi's reflections over many years on the question of authority and power. Who gets to represent whom and by what authority? Dabashi's work picks up where Edward Said's Orientalism left off. Said traced the origin of the power of representation and the normative agency that it entails to the colonial hubris that carried a militant band of mercenary merchants, military officers, Christian missionaries, and European Orientalists around the globe. This hubris enabled them to write and represent the people they sought to rule. Dabashi's book is not as much a critique of colonial representation as it is of the manners and modes of fighting back and resisting it. He does not question the significance of Orientalism and its principal concern with the colonial acts of representation, but he provides a different angle that argues for the primacy of the question of postcolonial agency. Dabashi uses the United States as an example of a country that initiated militant acts of representation in Iraq and Afghanistan. He attempts to unearth and examine the United States' deeply rooted claim to normative and moral agency, particularly in light of the world's post-9/11 political reality.

Knowledge is Power in Four Dimensions: Models to Forecast Future Paradigms, Forecasting Energy for Tomorrow's World with Mathematical Modeling and Python Programming Driven Artificial Intelligence delivers knowledge on key infrastructure topics in both AI technology and energy. Sections lay the groundwork for tomorrow's computing functionality, starting with how to build a Business Resilience System (BRS), data warehousing, data management, and fuzzy logic. Subsequent chapters dive into the impact of energy on economic development and the environment and mathematical modeling, including energy forecasting and engineering statistics. Energy examples are included for application and learning opportunities. A final section deliver the most advanced content on artificial intelligence with the integration of machine learning and deep learning as a tool to forecast and make energy predictions. The reference covers many introductory programming tools, such as Python, Scikit, TensorFlow and Kera. Helps users gain fundamental knowledge in technology infrastructure, including AI, machine learning and fuzzy logic Compartmentalizes data knowledge into near-term and long-term forecasting models, with examples involving both renewable and non-renewable energy outcomes Advances climate resiliency and helps readers build a business resiliency system for assets

Knowledge and Power in a Time of Terror

*Brown here explores America's first communications revolution--the revolution that made printed goods and public oratory widely available and, by means of the steamboat, railroad and telegraph, sharply accelerated the pace at which information travelled. He describes the day-to-day experiences of dozens of men and women, and in the process illuminates the social dimensions of this profound, far-reaching transformation. Brown begins in Massachusetts and Virginia in the early 18th century, when public information was the precious possession of the wealthy, learned, and powerful, who used it to reinforce political order and cultural unity. Employing diaries and letters to trace how information moved through society during seven generations, he explains that by the Civil War era, cultural unity had become a thing of the past. Assisted by advanced technology and an expanding economy, Americans had created a pluralistic information marketplace in which all forms of public communication--print, oratory, and public meetings--were competing for the attention of free men and women. Knowledge is Power provides fresh insights into the foundations of American pluralism and deepens our perspective on the character of public communications in the United States.*

*When Mike Feinberg and Dave Levin signed up for Teach for America right after college and found themselves utter failures in the classroom, they vowed to remake themselves into superior educators. They did that—and more. In their early twenties, by sheer force of talent and determination never to take no for an answer, they created a wildly successful fifth-grade experience that would grow into the Knowledge Is Power Program (KIPP), which today includes sixty-six schools in nineteen states and the District of Columbia. KIPP schools incorporate what Feinberg and Levin learned from America's best, most charismatic teachers: lessons need to be lively; school days need to be longer (the KIPP day is nine and a half hours); the completion of homework has to be sacrosanct (KIPP teachers are available by telephone day and night). Chants, songs, and slogans such as "Work hard, be nice" energize the program. Illuminating the ups and downs of the KIPP founders and their students, Mathews gives us something quite rare: a hopeful book about education.*

*This book is a comparative study of two major Sh'??? thinkers ?am?d al-D'n Kirm?n? from the Fatimid Egypt and Mull? ?adr? from the Safavid Iran, demonstrating the mutual empowerment of discourses on knowledge formation and religio-political authority in certain Isma?ili and Twelver contexts. The book investigates concepts, narratives, and arguments that have contributed to the generation and development of the discourse on the absolute authority of the imam and his representatives. To demonstrate this, key passages from primary texts in Arabic and Persian are translated and closely analyzed to highlight the synthesis of philosophical, Sufi, theological, and scriptural discourses. The book also discusses the discursive influence of Na?r al-D'N ?n?s? as a key to the transmission of Isma?ili narratives of knowledge and authority to later Sh'??? philosophy and its continuation to modern and contemporary times particularly in the narrative of the guardianship of the jurist in the Islamic Republic of Iran.*

Michel Foucault's work is rich with implications and insights concerning spatiality, and has inspired many geographers and social scientists to develop these ideas in their own research. This book, the first to engage Foucault's geographies in detail from a wide range of perspectives, is framed around his discussions with the French geography journal Hérodote in the mid 1970s. The opening third of the book comprises some of Foucault's previously untranslated work on questions of space, a range of responses from French and English language commentators, and a newly translated essay by Claude Raffestin, a leading Swiss geographer. The rest of the book presents specially commissioned essays which examine the remarkable reception of Foucault's work in English and French language geography; situate Foucault's project historically; and provide a series of developments of his work in the contemporary contexts of power, biopolitics, governmentality and war. Contributors include a number of key figures in social/spatial theory such as David Harvey, Chris Philo, Sara Mills, Nigel Thrift, John Agnew, Thomas Flynn and Matthew Hannah. Written in an open and engaging tone, the contributors discuss just what they find valuable - and frustrating - about Foucault's geographies. This is a book which will both surprise and challenge.

In this classic collection, some of the world's most eminent critics of development review the key concepts of the development discourse. Each essay examines one concept from a historical and anthropological point of view, highlights its particular bias, and exposes its historical obsolescence and intellectual sterility. The authors argue that a bidding farewell to the whole Eurocentric development idea is urgently needed, in order to liberate people's minds in both North and South for bold responses to the environmental and ethical challenges now confronting humanity. The combined result forms a must-read invitation to experts, grassroots movements and students of development to recognize the tainted glasses they put on whenever they participate in the development discourse.

In the life sciences and beyond, new developments in science and technology and the creation of new social orders go hand in hand. In short, science and society are simultaneously and reciprocally coproduced and changed. Scientific research not only produces new knowledge and technological systems but also constitutes new forms of expertise and contributes to the emergence of new modes of living and new forms of exchange. These dynamic processes are tightly connected to significant redistributions of wealth and power, and they sometimes threaten and sometimes enhance democracy. Understanding these phenomena poses important intellectual and normative challenges: neither traditional social sciences nor prevailing modes of democratic governance have fully grappled with the deep and growing significance of knowledge-making in twenty-first century politics and markets. Building on new work in science and technology studies (STS), this book advances the systematic analysis of the coproduction of knowledge and power in contemporary societies. Using case studies in the new life sciences, supplemented with cases on informatics and other topics such as climate science, this book presents a theoretical framing of coproduction processes while also providing detailed empirical analyses and nuanced comparative work. Science and Democracy: Knowledge as Wealth and Power in the Biosciences and Beyond will be interesting for students of sociology, science & technology studies, history of science, genetics, political science, and public administration.

We live in an algorithmic society. Algorithms have become the main mediator through which power is enacted in our society. This book brings together three academic fields - Public Administration, Criminal Justice and Urban Governance - into a single conceptual framework, and offers a broad cultural-political analysis, addressing critical and ethical issues of algorithms. Governments are increasingly turning towards algorithms to predict criminality, deliver public services, allocate resources, and calculate recidivism rates. Mind-boggling

amounts of data regarding our daily actions are analysed to make decisions that manage, control, and nudge our behaviour in everyday life. The contributions in this book offer a broad analysis of the mechanisms and social implications of algorithmic governance. Reporting from the cutting edge of scientific research, the result is illuminating and useful for understanding the relations between algorithms and power. Topics covered include: Algorithmic governmentality Transparency and accountability Fairness in criminal justice and predictive policing Principles of good digital administration Artificial Intelligence (AI) in the smart city This book is essential reading for students and scholars of Sociology, Criminology, Public Administration, Political Sciences, and Cultural Theory interested in the integration of algorithms into the governance of society.

*ÔChina threat or China opportunity, like beauty, is in the eyes of the beholder. Western imaginations of China come under close scrutiny in this book, in a new, philosophical depth seldom attempted before. Dr Pan displays in full force his analytical skills and his mastery of knowledge, both East and West. Contrary to conventional approaches, he takes a step back to exercise a powerful reflective process to watch the China watchers, with illuminating results. Dr Pan's book deserves wide and careful reading.Ô Ð Professor Gerald Chan, University of Auckland, New Zealand ÔThe rise of China is largely seen as either a threat or an opportunity. Chengxin Pan exposes both of these representations as expressions of Western fears and desires for certainty and predictability. His call for a more reflective and culturally sensitive understanding of China offers an important contribution to one of the big political debates of our time.Ô Ð Professor Roland Bleiker, University of Queensland, Australia ÔThis is a brilliant and insightful treatment of Western representations of China, with a theoretical framework suggesting they come not only from China itself, but also the West. Although it is not the first treatment of this topic, it is innovative in considering the ÔChina threatÔ and ÔChina opportunityÔ: both aspects of the rise of China are of crucial importance for our times. With provocative conclusions, it is a truly path-breaking contribution to the literature. I recommend it highly!Ô Ð Emeritus Professor Colin Mackerras, Griffith University, Australia ÔPan has produced a book which not only challenges some basic assumptions about the nature of China's ÔriseÔ, but more importantly forces us to rethink the very basic starting points of how we know what we know about China.Ô Ð Professor Shaun Breslin, University of Warwick, UK How is the rise of China perceived in the West? Why is it often labelled as ÔthreatÔ and/or ÔopportunityÔ? What are the implications of these China imageries for global politics? Taking up these important questions, this groundbreaking book argues that the dominant Western perceptions of China's rise tell us less about China and more about Western self-imagination and its desire for certainty. Chengxin Pan expertly illustrates how this desire, masked as China ÔknowledgeÔ, is bound up with the political economy of fears and fantasies, thereby both informing and complicating foreign policy practice in Sino-Western relations. Insofar as this vital relationship is shaped not only by China's rise, but also by the way we conceptualise its rise, this book makes a compelling case for critical reflection on China watching. Knowledge, Desire and Power in Global Politics is the first systematic and deconstructive analysis of contemporary Western representation of China's rise. Setting itself apart from the mainstream empiricist literature, its critical interpretative approach and unconventional and innovative perspective will not only strongly appeal to academics, students and the broader reading public, but also likely spark debate in the field of Chinese international relations.*

*Knowledge and Power shows how science has developed in different historical settings by focusing on four episodes in the history of world science from the Middle Ages to the mid-twentieth century. The title of this book comes from a famous saying by the English Renaissance philosopher Francis Bacon: "Knowledge is Power." Through a combination of narrative and primary sources, author William Burns explores the following topics in order to provide students with an understanding of how different cultures throughout time and across the globe approached science: Science in the Medieval Mediterranean, The Jesuits and World Science ca. 1540-1773, Science in Russia and Japan ca. 1684-1860s, and Africa in the Age of Imperialism and Nationalism ca. 1860-1960.*

*Rising to Power is a time tested, wisdom-packed guide for executives desiring to be exceptional leaders as they navigate their ascent to the highest levels of their organization. Nearly two-thirds of all leaders entering executive roles lack sufficient understanding of what is required and are unprepared for what they will face, which explains why 50 percent of them fail within the first eighteen months. For decades we have known that failure rates among transitioning executives are too high, causing exorbitant costs, damaged organizations, and stalled careers. Still, little has changed in the way organizations prepare leaders to assume executive positions. Three-fourths of new executives say their organization did not adequately prepare them for the executive office. It doesn't have to be this way. If you are an executive—or you're aspiring to be one—and considering how you will navigate the ascent in your organization, Rising to Power will serve you like no other resource can. Odds are high you have watched a promising executive fail on their way up. Like many, you scratched your head, wondering, "Why didn't they see that coming?" Now you're hoping not to be the next one that falls. Rising to Power will guide you on a predictable journey of ascent, through the transitional moments and issues most common in executive failure. It will bolster your confidence, open your eyes, deepen your insight, and if you let it, reveal your own proclivities for failure that you may not even recognize. Based on a ten-year longitudinal study, Rising to Power offers a profoundly new way of looking at an executive's rise in an organization, and offers an approach to significantly increase your odds of success.*

The Earth is slowly heating up, and only we, as a global community, can stop it. With the knowledge behind what is happening, we can effect change. Using his Ph.D in Molecular Biophysics and Biochemistry from Yale and his LL.M in Environmental and Natural Resources Law from the Northwestern College of Law at Lewis & Clark University, Dr. John Perona takes us on a journey into the science and politics of the climate crisis. Dr. Perona unites the basic science of climate change, the rise of green technologies, and the political implications of climate science to present a concise guide to the critical facts of climate change. He offers actionable tips on how to engage with scientific leaders, government officials, community leaders, and individuals like you and me. Dr. Perona offers a grounded, optimistic outlook for humanity, but only if we engage with science and act with knowledge.

This publication provides readers with vital information and statistics on the HIV epidemic. For people who may have been exposed to HIV, knowledge is critical to making informed decisions about their future. An HIV test is a serious event with potentially serious outcomes. But no matter the result, the test provides vital information. A negative result is an opportunity to take deliberate steps to prevent future acquisition through prevention methods tailored to that individual's risks. A positive test result—and a confirmatory diagnosis—is never welcome news, but for people living with HIV, it is a necessary first step towards a long and healthy life.

This study is the first extensive attempt to chart the rise and fall of popular educational movements across Europe following the 1848 revolutions to their demise at the outbreak of World War Two. It examines in detail the relationships between the educational, political and social aspirations of the emergent nationalist, workers' and women's movements, and the challenge to traditional intellectuals and academic knowledge. Following the emergence of the bourgeois public sphere in the early modern period, popular educational movements were central to the pursuit of democratic civil societies and also fertile ground for innovative subjects of knowledge and interdisciplinary study, which have frequently reshaped the academic curriculum. Radical forms flourished, ranging from civic educational leagues to folk high schools, workers' study circles, rationalist schools, Volksheims and university settlements that fed the demand for high-quality, socially relevant and politically charged education for adults. These stimulated radical social change, challenging the old empires and clerical domination. The study plots the cross-cultural influences at work and shows why some models were more palatable than others, drawing special attention to the rise of sociological positivism and anti-clericalism. It concludes by considering the contemporary global currents of renewal.
