Based on the authors' combined experience of seventy years working on projects around the globe, *Construction Equipment Management for Engineers, Estimators, and Owners* contains hands-on, how-to information that you can put to immediate use. Taking an approach that combines analytical and practical results, this is a valuable reference for a wide range of individuals and organizations within the architecture, engineering, and construction industry. The authors delineate the evolution of construction equipment, setting the stage for specific, up-to-date information on the state-of-the-art in the field. They cover estimating equipment ownership, operating cost, and how to determine economic life and replacement policy as well as how to schedule a production-driven, equipment-intensive project that achieves target production rates and meets target equipment-related unit costs and profits. The book includes a matrix for the selection of equipment and identifies common pitfalls of project equipment selection and how to avoid them. It describes how to develop an OSHA job safety analysis for an equipment-intensive project, making this sometimes onerous but always essential task easier. The authors' diverse and broad experience makes this a book that ranges from the rigorous mathematical analysis of equipment operations to the pragmatic discussion of the equipment maintenance programs needed to guarantee that the production

The Bible looks upon man as a whole integral being. This book explores steps you can take to experience personal transformation

The objective of this project is to develop and test a portable barrier system for high-speed applications that can be easily transported and erected by Texas Department of Transportation (TxDOT) maintenance forces using readily available equipment such as a front-end loader. Consideration was given to factors such as segment length, segment weight, connection method, barrier constructability, and dynamic barrier deflection.

This book presents new directions in contemporary anthropological dream research, surveying recent theorizations of dreaming that are developing both in and outside of anthropology. It incorporates new findings in neuroscience and philosophy of mind while demonstrating that dreams emerge from and comment on sociohistorical and cultural contexts. The chapters are written by prominent anthropologists working at the intersection of culture and consciousness who conduct ethnographic research in a variety of settings around the world, and reflect how

dreaming is investigated by a range of informants in ever more diverse sites. As well as theorizing the dream in light of current anthropological and psychological research, the volume accounts for local dream theories and how they are situated within distinct cultural ontologies. It considers dreams as a resource for investigating and understanding cultural change; dreaming as a mode of thinking through, contesting, altering, consolidating, or escaping from identity; and the nature of dream mentation. In proposing new theoretical approaches to dreaming, the editors situate the topic within the recent call for an "anthropology of the night" and illustrate how dreams offer insight into current debates within anthropology's mainstream. This up-to-date book defines a twenty-first century approach to culture and the dream that will be relevant to scholars from anthropology as well as other disciplines such as religious studies, the neurosciences, and psychology.
