This book addresses one of the largest unmet needs in transplantation, the need to reduce late allograft loss. In the current era, it is reasonable to expect that most allografts will serve their recipients through their life span and death with preserved graft function the ultimate goal for all transplant recipients. However, long term allograft survival has not paralleled improvements made in short term survival. Each year a percentage of the existing organ transplant patients will lose their grafts. The problem of late allograft failure is due in part to pathogenic processes, to drug management, and to transplant patient care delivery. This book pulls together the science in this area and serves as a resource and as a catalyst for further research. The book has been divided into sections covering the entirety of chronic allograft loss from basic science consideration to clinical implications. The goal of this book is to provide the reader with an overview of long term problems in solid organ transplantation. This overview not only

includes the diagnosis of immunologic and non-immunologic causes of chronic graft loss but current management as well as novel therapies for future application. This book will make a useful contribution to the literature.

Originating in Japan in the twelfth century, surimi is refined fish myofibrillar proteins produced through various processes. The development of the surimi product crabstick in Japan in the 1970s played a major role in globalizing surimi and expanding surimi seafood consumption to the United States, Europe, and Russia. Commercial surimi production has also changed significantly. *Surimi and Surimi Seafood, Third Edition* covers the resources, production, technology, and nutrition of surimi and surimi seafood. Like the previous editions, this reference serves as a global surimi and surimi seafood industry guide. Revised and expanded, this new edition adds the most up-to-date information on the science of surimi and surimi seafood, with an increase from 17 to 23 chapters coauthored by 63 scientists and industry leaders. Presenting broader, more in-depth content, highlights include historical reviews of the surimi technology and industry, comminution technology and application, coproduct utilization, and nutrition and health benefits. The text examines topics related to surimi and fish proteins, including gelation chemistry, proteolytic enzymes, and stabilization of

In recent years, clinical research using ambulatory blood pressure monitoring (ABPM) or home BP monitoring has clarified that morning BP and BP surge are more closely related to the cardiovascular risk than clinical BP. This practical manual from field leading expert, Dr. Kazuomi Kario, reviews recent evidence on morning and nocturnal hypertension and the IT technologies physicians can use to support patients in home monitoring BP. Guidance on management via antihypertensive drugs is also discussed and with the aim of promoting perfect 24 hour BP control.
