The book provides insights from the 2nd International Conference on Communication, Computing and Networking organized by the Department of Computer Science and Engineering, National Institute of Technical Teachers Training and Research, Chandigarh, India on March 29–30, 2018. The book includes contributions in which researchers, engineers, and academicians as well as industrial professionals from around the globe presented their research findings and development activities in the field of Computing Technologies, Wireless Networks, Information Security, Image Processing and Data Science. The book provides opportunities for the readers to explore the literature, identify gaps in the existing works and propose new ideas for research.

The Taming of the Jew. Israel's number one best-selling e-book, is Tavia Tenenbom's funniest and most disturbing book to date. For months on end, Tavia roamed through the four nations that make up the United Kingdom – Northern Ireland, Scotland, England, and Wales. He interacted with anyone and everyone who came his way throughout his journey; from the terrifying ghosts long dead to the highly esteemed lords and baronesses very much alive, most of whom happened to be anti-Semites. But that's not all. While wandering around, Tavia caught a nap in Winston Churchill's room, curled up in Hillary Clinton's European bed, played cat-and-mouse with the most infamous British politician, Jeremy Corbyn, and enjoyed excellent tobacco with the Brexit architect, Nigel Farage. In between, he drank the blackest of coffees with a well-known bank robber, maintained close contact with an eagle, swallowed a monster, and chatted with Jewish leaders who fervently defended every anti-Semite in Her Majesty's Kingdom.

This book presents an authoritative overview of the emerging field of person-centered psychiatry. This perspective, articulating science and humanism, arose within the World Psychiatric Association and aims to shift the focus of psychiatry from organ and disease to the whole person within their individual context. It is part of a broader person-centered perspective in medicine that is being advanced by the International College of Person-Centered Medicine through the annual Geneva Conferences held since 2008 in collaboration with the World Medical Association, the World Health Organization, the International Council of Nurses, the International Federation of Social Workers, and the International Alliance of Patients' Organizations, among 30 other international health institutions. In this book, experts in the field cover all aspects of person-centered psychiatry, the conceptual keystones of which include ethical commitment; a holistic approach; a relationship focus; cultural sensitivity; individualized care; establishment of common ground among clinicians, patients, and families for joint diagnostic understanding and shared clinical decision-making; people-centered organization of services; and person-centered health education and research.

People facing a new diagnosis of cancer are unsettled by their prognosis and treatment options, and they often seek to integrate complementary modalities into their conventional care plan, hoping to improve their chances of cure and decrease side effects. Many do so without informing their oncologist, for fear of alienating them or not convinced that their physician would be informed about complementary therapies. Integrative Oncology, the first volume in the Weil Integrative Medicine Library, provides a wealth of information for both practitioners and consumers on the emerging field of integrative oncology. Noted oncologist Donald Abrams and integrative medicine pioneer Andrew Weil and their international panel of experts present up-to-date and extensively referenced chapters on a wide spectrum of issues and challenges, bound in one comprehensive, reader-friendly text in a format featuring key points, sidebars, tables, and a two-color design for ease of use. It is destined to emerge as the definitive resource in this emerging field.

Today's practice of psychiatric administration is totally different from that in past years because of the vast changes sweeping the health care and behavioral health care sectors. Reflecting these changes, this completely revamped second edition contains all-new chapters by 68 contributors (most new to this edition). This definitive textbook provides the practitioner and student of administration in behavioral healthcare with an up-to-date compendium focused on five central issues that represent the framework of the debate that will guide the evolution of behavioral health care during the next few years: An overview of the evolving behavioral health system, from the rich legacy of the community mental health movement mandated by federal legislation in the 1950s to today's paradigm, which is instead driven by the marketplace phenomena of managed care, information systems, and consumer empowerment. Core and new administrative psychiatry concepts and new roles for behavioral health players, including organizational theories, leadership requirements, planning models, and information system solutions, as well as new models of program evaluation and quality management and innovations in training and human resource development. How selected behavioral health systems are changing and the trend toward integrated systems, addressing the challenge of delivery system configuration and integrated service delivery as the system evolves from cost-based fee for service to managed care settings, as well as important new roles for psychiatric administrators in behavioral health network establishment and maintenance, staffing, capitated financing, population-based care, and outcome management. A comprehensive overview of the current system, from hospitals (including VA and military services) to county mental health departments, child and family service agencies, and HMOs, with new roles for everyone – psychiatrists, administrators, and mental health clinicians as well as consumers and their families -- in the consumer-focused health care systems of the future. Law and ethics, which includes prisons and civil law issues and considers the special challenge of working within a field where innovation, science, and the marketplace are running well ahead of the legal and bioethics communities. Offering an in-depth study of areas never before covered, this extensively referenced volume concludes with a discussion of future issues in administrative psychiatry, as the "disruptive technologies" that forced the restructuring of banking, automobile manufacturing, consumer electronics, and other industries start to have an impact on health care. Broad in appeal as well as scope, this unique reference will find a worldwide audience -- from administrators facing the challenges of designing and administering a cost-efficient, effective care system to trainees studying for certification, and nearly everyone in between: from social workers to medical directors, staff psychiatrists, nurses, and middle managers of private and public psychiatric hospitals and behavioral health managed care organizations.

Foreword by Nan Roman, President and CEO of the National Alliance to End Homelessness This book explains how to end the U.S. homelessness crisis by bringing together the best scholarship on the subject and sharing solutions that both local communities and national policy-makers can apply now In the Midst of Plenty shifts our understanding of the phenomenon of homelessness away from issues of individual disability and embeds it in larger contexts of poverty, income inequality, housing affordability, and social exclusion. Homelessness experts Shinn and Khadduri provide guidance on how to end homelessness for people who experience it and how to prevent so many people from reaching the point where they have no alternative to sleeping on the street or in emergency shelters. The book is organized around four questions: Who becomes homeless? Why do people become homeless? How do we end homelessness? How do we prevent it? Based on a comprehensive look at relevant research, the authors show that we know how to end homelessness—if we devote the necessary resources to doing so. In the Midst of Plenty: Homelessness and What to Do About It is an excellent resource for professionals and decision-makers in the homeless services system, as well as for anyone who is interested in helping to end homelessness. It also can be used as a text in undergraduate or masters courses in public policy, sociology, psychology, social work, urban studies, or housing policy. "The knowledgeable and thoughtful authors of this book—two brilliant women who know as much as anyone in the country about the nature of homelessness and its solutions—have done a great service by taking us on a journey through the history of homelessness, how our responses have changed, and how we can end it." Nan Roman, President and CEO National Alliance to End Homelessness. "Shinn and Khadduri's new book is a thorough yet concise examination of what we know about the nature and causes of homelessness, and the crucial lessons learned. This critically important work provides a roadmap to restoring basic housing and income security as viable policy options, in the face of our daunting inequality divide that otherwise threatens millions with destitution and homelessness." Dennis Culhane, Dana and Andrew Stone Professor of Social Policy, University of Pennsylvania "Marybeth Shinn and Jill Khadduri have combined their significant expertise to create an essential guide about the history of modern homelessness and to offer a clear path forward to end this American tragedy. Their policy recommendations on ending homelessness are culled from the best about what we know works." Barbara Poppe, Executive Director US Interagency Council on Homeless, 2009-2014.

Cardiovascular Fluid Dynamics, Volume 1 explores some problems and concepts of mammalian cardiovascular function, with emphasis on experimental studies and methods. It considers pressure measurement in experimental physiology, including the measurements of pulsatile flow, flow velocity, lengths, and dimensions; the use of control theory and systems analysis in cardiovascular dynamics; the application of computer models in cardiovascular research; the meaning and measurement of myocardial contractility; and the consequences of the steady-state analysis of arterial function. Organized into 10 chapters, this volume begins with an overview of the mammalian cardiovascular system and the essential features of cardiovascular function. It then discusses the practical problems associated with the use of pressure transducers in physiological and cardiac laboratories, the challenges involved in pulsatile flow measurement using flowmeters and thermal devices, and the mechanical analysis of the circulatory system. It explains some computer modeling techniques used in investigating the hemodynamics of the cardiovascular system, including the heart and heart muscle; basic concepts of muscle mechanics and the mechanical properties of cardiac muscle; the fluid mechanics of heart valves; and the pressure and flow in large arteries. The book concludes with a chapter on vascular resistance and vascular input impedance. This book is intended for biologists, physical scientists, and others interested in cardiovascular physiology.

This text/atlas of radiography introduces the scope of diagnostic radiology applicable to podiatric medicine, including normal and pathological presentations of the foot and ankle. It covers the principles of radiographic interpretation, normal and variant radiographic anatomy and development of the foot and ankle, systematic evaluation of bone and joint disorders, as well as bone and joint abnormalities. An excellent guide to the radiographic presentations of pathologic conditions, this book acquaints the reader with specific radiologic pathology of the foot and ankle and offers a solid understanding of general diagnostic radiology and pathologic correlation. It also demonstrates how to systematically analyze a radiograph and identify conditions that are intrinsic to the foot or that represent manifestations of extrinsic disease. Approximately 1,000 quality radiographs and line drawings illustrate concepts and disorders.

Normal and variant radiographic anatomy is discussed and illustrated, providing examples of both normal and variant radiographs for effective comparison. A specific section on bone and joint disorders presents specific examples of these types of disorders.

The book compiles the results of several research studies on this subject. It discusses important developments in interpersonal psychotherapy research and its translation into clinical practice. It describes typical phases of treatments and highlights applications for patient populations, which have seen results from interpersonal psychotherapy.

This book features selected research papers presented at the First International Conference on Computing, Communications, and Cyber-Security (IC4S 2019), organized by Northwest Group of Institutions, Punjab, India, Southern Federal University, Russia, and IAC Educational Trust, India along with KEC, Ghaziabad and ITS, College Ghaziabad as an academic partner and held on 12–13 October 2019. It includes innovative work from researchers, leading innovators and professionals in the area of communication and network technologies, advanced computing technologies, data analytics and intelligent learning, the latest electrical and electronics trends, and security and privacy issues.

Primary Knee Arthroplasty

Proceedings of First International Conference on Computing, Communications, and Cyber-Security (IC4S 2019)

Why waste time guessing at what you need to know for the podiatry boards? Maximize your exam preparation time with this quick-hit question and answer review. The unique question and single-answer format eliminates the guesswork associated with traditional multiple-choice Q&A reviews and reinforces only the correct answers you'll need to know on exam day. Emphasis is placed on distilling key facts and clinical pearls essential for exam success. Great for certification and re-certification, this high-yield review for the boards is the perfect compliment to larger texts for intense, streamlined review in the days and weeks before your exam.

Primary knee arthroplasty (PKA) has a long history and modern mobile bearing knee implants are successfully implanted worldwide since 1977. Primary Knee Arthroplasty focuses on basic science, personal surgical experiences, clinical, functional and radiographic outcomes of PKA, with special focus on challenging knees such as severe varus and valgus deformities with associated bone defects, fixed flexion deformities, soft tissue contractures, and arthrodesed knees. Patella treatment with or without resurfacing is addressed in great detail. Early criterion-based rehabilitation and the patient's return to participating in sports are discussed as is the management of prosthetic or surgery related complications. Lavishly illustrated to complement the text, Primary Knee Arthroplasty is a "must-have" for all practicing knee replacement surgeons, orthopedic surgeons in training, orthopedic nurses, and physiotherapists with a special interest in knee arthroplasty. Tips and tricks provided by experienced knee surgeons are indispensable for daily clinical practice.

Provides information on more than one thousand diseases and disorders.

Foot and Ankle Radiology

Podiatric Infectious Diseases: Essentials for Practice, 2nd Edition

Bridging the gap between undergraduate and postgraduate knowledge and experience, this new full colour resource uses an interdisciplinary approach to help manage chronic conditions - osteoarthritis, Achilles tendinopathy, gout, rheumatic diseases, forefoot/rearfoot entities, stress fractures/reactions, cerebral palsy - in the lower limb and foot. Each chapter includes sections on predisposing factors, diagnosis, impairments, function, quality of life and management strategies while highlighting any complex features of a condition which may present. The latest advances are discussed with suggestions for new paths of research - 'future directions'. The text is further supported by additional commentaries from internationally renowned researchers who highlight the key elements of the work and provide a supplementary perspective of the particular clinical condition. A general view of the patient's needs is offered throughout, connecting clinical realities to real-world patient experiences. Management of Chronic Conditions in the Foot and Lower Leg is a comprehensive, practical tool that can be used to inform daily decision making in practice as well as to support those who build policy and management strategies in the clinical areas covered. Clear content and structure supported by full colour illustrations Includes less discussed conditions such as gout and cerebral palsy Focus on pain, impairment, function, quality of life and management strategies Critical reflections by experts highlight current clinical practice and thinking in research Provides a sound interpretation of research findings
