In an era of rapidly shrinking resources, efficient utilization of public resources is of paramount importance. Health care, social services, education, law enforcement, and other fields have established their own standards against which program operations are assessed. National accrediting bodies have implemented systems of rigorous peer review to ensure the quality of program processes and outcomes. Nongovernmental organizations must demonstrate success in achieving their stated goals in order to sustain or expand program funding. In the 21st century, process (how programs are organized and how work is conducted) has become as important as outcomes in determining program effectiveness. Responding to these dynamic challenges, the authors utilize concrete case studies to immerse students in the techniques of program evaluation. They effectively examine systems theory, project planning, queuing theory, cost-benefit analysis, and organization processes (including standards-based program accreditation), providing practical examples in an easy-to-comprehend style. In addition, comprehensive discussions explain how process intervention is utilized to achieve program adaptations and strategic change. Like its highly regarded predecessors, the latest edition features evaluation exercises designed to facilitate student development of indicators and measures when dealing with real-world programs. An Instructors Manual provides solutions to the case studies in the appendix of the text, further clarifying the program planning and evaluation process.

So long as there are weaknesses that can be exploited for gain, companies, other organizations and private individuals will be taken advantage of. This theoretically-based but hugely practical book focuses on what is generally seen as financial or economic crime: theft, fraud, manipulation, and corruption. Petter Gottschalk considers how, in some competitive environments, goals can 'legitimise' all kinds of means, and how culture can exert a role in relation to what is seen as acceptable or unacceptable behaviour by individuals. In Investigation and Prevention of Financial Crime he addresses important topics including organized crime, money laundering, cyber crime, corruption in law enforcement agencies, and whistleblowing, and provides expert advice about strategies for the use of intelligence to combat financial crime. The uniqueness of his approach to the subject lies in the way he is able to explain intelligence and intelligence processes in the wider context of knowledge and knowledge management. The numerous case studies throughout the book illustrate the 'policing' of financial crime from an intelligence, knowledge management and systems perspective. Law enforcers, lawyers, security personnel, consultants and investigators, as well as those in auditing and accountancy and with responsibilities for containing risk in banks, other financial institutions and in businesses generally, will find this an invaluable source of practical guidance. The book will also be of interest to advanced students and researchers in criminology and police science.

Evaluating the role of logistics and supply chain management skills or applications is necessary for the success of any organization or business. As market competition becomes more aggressive, it is crucial to evaluate ways in which a business can maintain a strategic edge over competitors. The Handbook of Research on Information Management for Effective Logistics and Supply Chains highlights strategies, tools, and skills necessary for supply management within organizations and companies. Featuring best practices and empirical research within the field, this handbook is a critical reference source for scholars, practitioners, researchers, information systems and telecommunication specialists, and managers.

**At a time when managers often provide fodder for unseemly headlines, and some are even compared unflatteringly with locusts, today's business leaders are called upon as never before to demonstrate the moral justification for their activities, and to ensure that it is understood by all the key stakeholders of a company. What is required is nothing less than a management renaissance, based on a thoroughgoing concept of corporate leadership; there is no less a need for decision makers who hold themselves to the highest standards, with a positive perception of their fu- tion as agents of dissemination, and who are committed to the good not only of "their" firm, but also of society in general. Particularly in today's environment of significant movements of goods, the hi- est priority is accorded to the social and labor policy elements of company m- agement. For its part, the State must create advantageous framework conditions and promote the willingness to accept risk that is fundamental to the entrepren- rial spirit. A social, constitutional state with a liberal social structure has always been and remains the prime concern of democratically spirited forces everywhere. When managers live up to the expectations with which they are entrusted, they lend the social market economy - often misunderstood and sometimes even m- used - a new luster. This in turn fulfils the hopes and expectations of those Eu- peans for whom the development of pan-European structures stands for the rec- ery from post-communist stagnation.**
