This book is a printed edition of the Special Issue "Growing Apart: Religious Reflection on the Rise of Economic Inequality" that was published in Religions. Critical reflection helps professionals to learn directly from their practice experience, so that they can improve their own work in an ongoing and flexible way – something essential in today's complex and changing organisations. It allows change to be managed in a way which enables individuals to preserve a sense of what is fundamentally important to them as professionals. It is particularly important as it can also help make sense of some fundamental issues, and so also has implications for how we live our lives. However, more systematic research on critical reflection is needed to help us understand what works best for professionals in different settings. This timely work explores how critical reflection is researched, evaluated and used as a research method itself, with the aim of improving how it is taught and practised in a rigorous and transferable way. Developing a more comprehensive and multi-disciplinary view of the current state of critical reflection and the research directions which need to be taken, the book is divided into four parts. It: - Provides an overview of different perspectives on critical reflection and stimulates dialogue between them - Establishes some common platforms from which to develop further research directions -

Identifies the major issues in evaluating critical reflection teaching, and main methods for doing so - Contributes to social science methodological innovations by exploring how methods based on critical reflection can be used for researching professional practice - Contains contributions from academics who are internationally known and highly experienced in different aspects of critical reflection. Researching Critical Reflection is an important reference for all students, practitioners, and researchers – including in the areas of education, management, health and social work – who engage with critical reflection to develop their practice.

Within education there is a growing body of research focused on the use of video as a mediational tool for reflection. The purpose of this volume is to bring together research and research-based practices from a wide array of literacy scholars and practitioners who are using video in educational research and teaching.

Whether you are a student or a working professional, you can benefit from being better at solving the complex problems that come up in your life. Strategic Thinking in Complex Problem Solving provides a general framework and the necessary tools to help you do so. Based on his groundbreaking course at Rice University, engineer and former strategy consultant Arnaud Chevallier provides practical ways to develop problem solving skills, such as investigating complex questions with issue maps, using logic to promote creativity, leveraging analogical thinking to approach unfamiliar problems, and managing diverse groups to foster innovation. This book breaks down the resolution process into four steps: 1) frame the problem

(identifying what needs to be done), 2) diagnose it (identifying why there is a problem, or why it hasn't been solved yet), 3) identify and select potential solutions (identifying how to solve the problem), and 4) implement and monitor the solution (resolving the problem, the 'do'). For each of these four steps - the what, why, how, and do - this book explains techniques that promotes success and demonstrates how to apply them on a case study and in additional examples. The featured case study guides you through the resolution process, illustrates how these concepts apply, and creates a concrete image to facilitate recollection. Strategic Thinking in Complex Problem Solving is a tool kit that integrates knowledge based on both theoretical and empirical evidence from many disciplines, and explains it in accessible terms. As the book guides you through the various stages of solving complex problems, it also provides useful templates so that you can easily apply these approaches to your own personal projects. With this book, you don't just learn about problem solving, but how to actually do it.

This edited book has been compiled in honor of Thomas S.C. Farrell, one of the most distinguished scholars in theorizing and researching language teacher reflection. It examines teacher reflection in three main areas: policies, practices and the impact of teacher reflection on teachers' practices and professional development. The data-driven chapters shed light on concerns and challenges experienced by teachers in diverse international

contexts and institutions, and discuss the practical implications of their findings across a variety of policy settings. The book addresses aspects of reflective practice including macro and micro policies and constraints, as well as opportunities in the engagement of reflective practice. In addition, it explores teachers' identity, cognition, emotion and motivation, areas which are relevant but often not discussed in the literature on reflective practice. Presenting comprehensive research conducted with learners and educators in a range of settings, this volume showcases self-reflection as a powerful tool to enhance student learning. The text builds on empirical insights to illustrate how language professionals can foster critical self-reflection amongst learners of English as an additional language. This text uses ecologically sensitive practitioner research that addresses issues of both practical and pedagogical significance in the fields of TESOL, language teaching and learning, and teacher education. By synthesizing interdisciplinary research and theory,

chapters show how various types of self-reflection—including guided and non-guided; group and individual forms; and written, oral, and technology-mediated reflection—can promote autonomous, self-regulated learning amongst students at various levels. Whilst offering readers a strong grounding in the theoretical and empirical knowledge that supports self-reflection, the volume gives constant attention is given to praxis, with a focus on effective pedagogical strategies and tools needed to implement, encourage, and evaluate critical learner reflection in readers' own teaching or research. This volume will be a critical resource for language-teaching professionals interested in critical learner reflection, including in-service, pre-service, and teacher educators in the field of TESOL. Scholars and researchers in the fields of applied linguistics and language education more broadly will find this volume valuable. Taking the concept and the practice of reflective teaching forward, this book introduces a well-structured, flexible framework for use by teachers at all

levels of development, from pre-service to novice to the most experienced. The framework outlines five levels of reflective practice—Philosophy; Principles; Theory-of-Practice; Practice; Beyond Practice—and provides specific techniques for teachers to implement each level of reflection in their work. Designed to allow readers to take either a deductive approach, moving from theory-into-practice, or an inductive approach where they start from a practice-into-theory position, the framework can be used by teachers alone, in pairs, or in a group.

Synthesizing ideas from minds as diverse as John Dewey and Paulo Freire, the Handbook of Reflection and Reflective Inquiry presents reflective thought in its most vital aspects, not as a fanciful or nostalgic exercise, but as a powerful means of seeing familiar events anew, encouraging critical thinking and crucial insight, teaching and learning. In its opening pages, two seasoned educators, Maxine Greene and Lee Shulman, discuss reflective inquiry as a form of active attention (Thoreau ' s "wide-awakeness"), an act of consciousness, and a process by which people can understand themselves, their work (particularly in the form of life projects), and others. Building on this foundation, the Handbook analyzes through the work of 40 internationally oriented authors: - Definitional issues concerning reflection, what it is and is not; - Worldwide social and moral conditions contributing to the growing interest in reflective inquiry in professional education; - Reflection as promoted across professional educational domains, including K-12 education, teacher education, occupational therapy, and the law; - Methods of facilitating and scaffolding reflective engagement; - Current pedagogical and research practices in reflection; - Approaches to assessing reflective inquiry. Educators across the professions as well as adult educators, counselors and psychologists, and curriculum developers concerned with adult learning will find the Handbook of Reflection and Reflective Inquiry an invaluable teaching tool for challenging times. Highlighting various topics such as instructional design, teacher education, and literacy assessment, this book is ideal for instructors, curriculum developers, instructional designers, IT specialists, education professionals, instructors, administrators, academicians, and researchers.

Reform-based mathematics has become a popular topic in the education field as this teaching emphasizes classroom discourse and instructional goals related to student engagement and an understanding of mathematical reasoning, concepts, and procedures using instructional practices that build on students' informal knowledge of mathematics. It also connects mathematics with other disciplines and the real world and provides opportunities for students to contribute and invent their own methods during problem-solving. Further study on the best practices, benefits, and

Use 80 reflection breaks as individual discussion starters or as part of a comprehensive professional growth plan that is perfect for teachers at all levels. What makes a good language teacher? This up-to-date, practical book addresses that question from a 'human' perspective, recognising that teachers are not just machines, but have feelings, needs and identities of their own. As the twenty-two topics of the chapters in this volume clearly indicate, language teachers are complex individuals, who are expected to have a range of personal qualities, to be able to satisfy the needs of their students and to have the knowledge and skills to provide instruction in a range of language areas. Not only that, but all of these requirements are constantly changing. The authors present new insights from the real teaching environment that will be an invaluable help to language teachers at all stages of professional development.

It has long been an interest of researchers in economics, sociology, organization studies, and economic geography to understand how firms innovate. Most recently, this interest has begun to examine the micro-processes of work and organization that sustain social creativity, emphasizing the learning and knowing through action when social actors and technologies come together in 'communities of practice'; everyday interactions of common purpose

and mutual obligation. These communities are said to spark both incremental and radical innovation. In the book, leading international scholars critically examine the concept of communities of practice and its applications in different spatial, organizational, and creative settings. Chapters examine the development of the concept, the link between situated practice and different types of creative outcome, the interface between spatial and relational proximity, and the organizational demands of learning and knowing through communities of practice. More widely, the chapters examine the compatibility between markets, knowledge capitalism, and community; seemingly in conflict with each other, but discursively not.

Exploring the frontiers of current understanding of situated knowing and learning, this book is for all those interested in the economic sociology of organizational creativity and knowledge capitalism in general.

Today, K-12 practitioners are challenged to become educational innovators. Yet, little is available to the practitioner to guide their reflection about the design, development, and implementation of these innovations in their own practice. This brief approaches such problems of practice from the perspectives of design research. Although design research typically centers on the partnership between researchers and practitioners in real-world settings, relationships between researchers and practitioners are not always practical. In this brief, the authors explore how the design research process can make the goals, assumptions, processes, methods, and outcomes of design research uniquely accessible to the practitioner. In clear, explicit language, it introduces design research to practitioners using both expository discussions and a robust narrative case study approach that ably guides the reader through the phases of design research, namely: Theory to innovation to practice

*This book focuses on the lived experiences of higher education professionals working in the face of stress, pressure and the threat of burnout and how acts of self-care and wellbeing can support, develop and maintain a sense of self. In considering the place of self-care in higher education, we are challenged with the tension that exists when it comes to the valuing of self-care and our individual and collective wellbeing. In Reflections on Valuing Wellbeing in Higher Education, authors present and explore the ways in which they manage and reframe their wellbeing and self-care, through mindfulness, compassion, connection to breath, reflection, demonstrating individual and collective embodiment and resistance to neoliberalism and environmental destruction. Covering various contexts of higher education, such as learning and teaching, research, leadership and engagement, this book offers practical strategies grounded in literature and evidence-based research. The self in self-care is relational. It is not just about self. We need others for inspiration, motivation and, indeed, the act.
